# TABLE OF CONTENTS

## SESSION 1: TEST EFFICACY AND STANDARDS

- **Guideline for Space System Late Changes Verification Management**
  S. Nagano, R. Fink, R. Griese, B. Hoang, B. Shaw, J. Sobetski
- **Managing Critical Clearances in Space and Launch Vehicles**
  B. Gore, A. Zapf
- **Investigation of the Relative Importance of Thermal Test Parameters as Specified in MIL-HDBK-344**
  J. Welch
- **Evolution of Complexity Index Methodology for Spacecraft Cost Comparison and Prediction**
  M. Pasquinelli, P. Messidoro, P. Maggiore, S. Voglino, V. Basso
- **New Issues of the European Verification and Testing Standard**
  P. Giordano, P. Messidoro
- **Introducing the Status and Topics of New JAXA Handbook for Spacecraft Mechanical Test**
  S. Qinzhong, S. Mikio
- **The MATED Initiative After 10 Years: Main Test Improvement Results and Potentialities**
  P. Messidoro, O. Brunner, A. Cerrato, E. Giorgio

## SESSION 2: INNOVATIONS IN TEST FACILITIES AND EQUIPMENT

- **Direct Field Acoustic Test - Recommended Practice**
  P. Larkin, B. Goldstein
- **Jet Propulsion Laboratory Environmental Test Laboratory Infrared Lamp Array**
  S. Chazanoff, I. Brown, M. McKee, P. Martin, B. Woodward
- **Planck S/C, Flight Model in Test at CSL**
  I. Domken, A. Cucchiaro, C. Grodent, P. Jamotton, S. Liebecq, I. Tychon, M. Thomé
- **TV25 Thermal Vacuum Test Facility at Wyle**
  J. Pinyan, T. Zhang, Y. M. Lee, R. Hughes
- **The Certification of Environmental Chambers for Testing Flight Hardware**
  K. Fields
- **Lessons Learned in Developing a Test as You Fly Six Degree-of-Freedom Shaker**
  W. Chung
- **The Challenges of Re-Starting and Operating an Inherited Non-Functional Facility for Ground Segment Testing**
  C. Rhoades, R. Burke
- **Turn Key Fully Controlled Thermal System for Space Applications**
- **Fluid Flow Test Stations and Data Acquisition Consoles for Spacecraft Propulsion Component and System Testing**
  C. Netwall, M. Osborn
- **Galileo IOV Spacecraft- Challenges & Issues During Vibration Testing**
  L. Fanchi, A. Bramante, P. Cosma
- **Solar Thermal Vacuum Test of Deployable Astromesh Reflector**
  M. Stegman
- **Little Mountain Test Facility Shock & Vibration Lab Control & Monitor System**
  D. Wilson
- **Mail-Box Type Vacuum Chamber System for the Optical Payload Test**
- **Access Fixture for the Large Thermal Vacuum Chamber**
  S. H. Lee, H. Seo, S.-Y. Yoo

## SESSION 3: MANAGEMENT OF TEST AND PEOPLE

- **Using Six Sigma to Reduce Test Defects**
  D. Harrison
Discussion of an Effective Process for Conducting Software Testing with Limited Personnel and Budget

V. Lollini

Sorry, What I Really Meant to Say Was...

C. Murphy

SESSION 4: MODELING, ANALYSIS, AND SIMULATION

Acoustically Induced Vibration of Structures: Reverberant vs. Direct Acoustic Testing

A. Kolaini, M. R. O’Connell, W. Tsai

Measuring the Sound Field Inside a Large Spacecraft Acoustic Chamber

M. Serridge

An Empirical Approach to Calculate the Envelope of Random Vibration Spectrum of Satellite Panel through Acoustic Test

M. Tsuchihashi, Q. Shi, M. Saitoh

Comparison of the Cassini Spacecraft In-Flight Temperature During Cruise and Primary Mission Phase to Prelaunch Testing Results

A. Hoffman, J. Forgrave, K. Man

Model Validation of an RSRM Transporter through Full Scale Operational & Modal Testing

R. Brillhart, J. Davis, B. Allred

Extracting Fixed Base Modal Models from Vibration Tests on Flexible Tables

R. Mayes, L. Bridgers

A Comparison of Modes and Damping Collected Using Traditional Modal Techniques vs. a Base Input Shaker for a Space-Bound System

D. Martinez, T. Carne, R. Mayes

SESSION 5: INTEGRATED DEVELOPMENTAL AND OPERATIONAL TEST AND EVALUATION FOR SUCCESSFUL OPERATIONS

From Early Influence to Dedicated OT&E: A New Model for Optimizing Space System T&E

K. Bole, K. Uhlmeyer, R. Putney

Ground System Combined Developmental and Operational Testing

D. J. Sanchez

Integrated Testing with the Space Threat Assessment Testbed

J. Prebola

SESSION 6: INSTRUMENTATION, DATA ACQUISITION, AND EVALUATION

Random and Quasi-Static Vibration Testing of Flight System: Logistics, Challenges and Results

E. Stasiunas, D. Gurule, T. Skousen

Pyroshock Simulation Systems: Are We Correctly Qualifying Flight Hardware for Pyroshock Environments?

A. Kolaini, R. Nayer, D. Kern

Test Methods to Fulfill Shock Response Spectrum Test Requirement

J. Czajkowski

Effective Data Validation Methodology for Pyrotechnic Shock Testing

C. Wright

Development and Qualification of an Infrared Camera System for Thermo-Graphic Applications in TV-TB Conditions

G. Casarosa, M. Appolloni, A. Cozzani, S. Sablefolle

Data Acquisition Approach to Deployment Testing of the Mars Science Laboratory’s Bridle and Umbilical Device

M. Schlosser, J. Gallon

Advanced Distributed Measurements and Data Processing at the Vibro-Acoustic Test Facility, GRC Space Power Facility, Sandusky, Ohio—An Architecture and an Example

G. Hill, R. Evans

Lessons Learned from Flexible Architecture Techniques Applied to a State-of-the-Art Real Time Control Problem

D. Studwell
SESSION 7: GROUND SEGMENT TEST

Extending Continuous Integration for Functional and Unit Test Automation ................................................................. G. Straw, M. Stolp 688
Considering Test Automation During Software Design ......................................................................................... E. Reber, J. Lear 705
Critical Ground Station Interfaces: Test Early and Test Often ............................................................................... M. Whitney 711
Regression Testing: By Design with Value for Ground Systems ................................................................... C. Kennell, M. Whitney 718
Test Coverage: Are We Testing Enough? ........................................................................................................... B. Casias 726
Keeping “Murphy” Out of Integration, or How to Best Aim for a Flawless Install ......................................................... C. Murphy 733

SESSION 8: TESTING CHALLENGES FOR HUMAN-RATED SPACE SYSTEMS

Micro-Vibration Qualification on Spacecraft Structures: A Challenge for Test Engineers ........................................ A. Grillenbeck, M. Wagner 747
Strategies for Validation Testing of Ground Systems ............................................................................................ T. Annis, T. Honeycutt 764
Dynamics and Control Complexities of Shaker for Human-Rated Spacecraft ......................................................... Dzu Le, J. Dolce, K. Otten, V. Suárez 785
Strategies for Ground-Based Testing of Manned Lunar Surface Systems .......................................................... J. Beyer, T. Gill, M. Peacock 798
A Physics-Based Temperature Stabilization Criterion for Thermal Testing ......................................................... S. Rickman, E. Ungar 814
Humidity Testing for Human-Rated Spacecraft ........................................................................................................ G. Johnson 836

SESSION 9: STRATEGIES AND METHODOLOGIES

Hall Effect Thruster Ground Testing Challenges ........................................................................................................... W. Hargus, M. Nalkes 847
Simultaneous Multiaxes Electrodynamic Shaker Vibration Testing ............................................................................... W. Tustin 885
Benefits of Early Verification and Validation ......................................................................................................... J. Williams 893
Test Effectiveness Factor for Random and Acoustic Test of Spacecraft Subsystems ........................................ K. Yanagase, S. Ando, Q. Shi 900
Can You Reduce the Time Launch by Performing Final Testing at the Launch Site? ........................................ D. Fleming, C. Belsick, B. Arnheim 914
Innovating Test Through Internal Audit: A Foundation for Mission Success .................................................. J. Svec 921

SESSION 10: FLIGHT SOFTWARE SYSTEM INTEGRATION AND TEST

A Methodology for Improving Architectural Representations for Quantitative Regression Test Analysis .................................................................................................................. P. Schmidt 927
Simulating Defectivity Profiles over Development Cycle with Dynamic COQUALMO ......................................................................................................................................................... D. Houston, D. Buettner, M. Hecht 938
The System Test Dangers from Concurrent Flight Software Engineering ...................................................... D. Buettner 952
