Society of Tribologists and Lubrication Engineers Annual Meeting and Exhibition 2010

Las Vegas, Nevada, USA
16-20 May 2010

Some format issues inherent in the e-media version may also appear in this print version.
# TABLE OF CONTENTS

Effect of Surface Roughness on Thermal Elastohydrodynamic Lubrication of Infinite Line Contacts
Prawal Sinha, Hasin Khan .................................................................................................................. 1

The Influence of Speed and Load Spectra on the Friction of Rolling Bearings
T. Stahl, S. Tremmel, H. Meerkamm, S. Wartzack ............................................................................... 4

Advanced Treatment Options for Metal Removal Fluid Wastewaters
Alan Cross, John Burke ......................................................................................................................... 7

Evaluation of Lubricants for Minimum Quantity Lubrication
Bruce L. Tai, Jean M. Daesch, Albert J. Shih ...................................................................................... 10

Endotoxin Measurements in Different Metalworking Fluid Types
Alexandra Fluri ........................................................................................................................................ 13

Corrosion Issues & Test Methods
Jerry P. Byers ......................................................................................................................................... 17

Prediction of Friction and Wear behavior of Al6061-SiCp (Ni-P coated) Composites
Chinnakurli Suryanarayana Ramesh, B. Hudedagaddi Channabasappa, Ramaiah Keshamvamurthy .............................................................................................................................................. 19

A Study on In-flight Characteristics of Inconel 718 Particles During HVOF Thermal Spray
Chinnakurli Suryanarayana Ramesh, Komandur Sudarshan Sridhar, Ramaiah Keshamvamurthy, M. Nadaf Tippusultan ......................................................................................................................... 22

A Study on Surface Finish of Laser-sintered IRON-SIC Composites
Chinnakurli Suryanarayana Ramesh, Cheekur Krishnamurthy Srinivasa, Varahasandra Ramalingegowda Raju, Ramaiah Keshamvamurthy .......................................................................................................................... 25

Modification of Surface Properties of Si Micro-molds by DLC Coatings Deposited with DC
Magnetron Sputtering

Effect of Oil Aging Due to Bio-fuels on Wear of Piston Ring and Cylinder Liner System
Martin Jech, Claudia Lenauer, Nicole Doerr, Thomas Wopelka, Karoline Steinschuetz, Michael Urbanek, Franz Novotny-Farkas .................................................................................................................................................. 31

Multi-level Used Oil Management
Donald J. Smolenski .................................................................................................................................. 34

Cradle to Grave Management of Metal Removal Fluids
Donald J. Smolenski ................................................................................................................................. 37

Numerical Investigation of Thermal Behavior of a Hybrid High-Speed Bearing
Jun Wang, Feliciano Greco ...................................................................................................................... 40

Formulating Vegetable-Based Industrial Lubricants: Performance and Rheological Considerations
James N. Vinci, Farrukh S. Qureshi ........................................................................................................ 43

Bearing Fatigue Life Tests of Advanced Base Oil for Space Applications Under Vacuum and Atmospheric Environments
Nobuyoshi Ohno, Kentaro Sonoda, Hiroyuki Tsuchida, Sobahan Mia, Shigeki Morita, Hiroshi Shiomori, Shingo Obara ........................................................................................................................................................................ 51

Electrochemical Friction Control Using Downhole Drilling Lubricants
M.N.F. Ismail, R.J.K. Wood, A. Humphreys, J.A. Wharton, T.J. Harvey .................................................. 54

Stopping Criterion in Iterative Solution Methods for Reynolds Equations
Nenzi Wang, Shih-Hung Chang, Hua-Chih Huang .............................................................................. 57

EHD Lubrication in Spiral Bevel Gears
Vilmos Simon ............................................................................................................................................ 60

A Review of Engineered Surfaces for Valvetrain Friction Reduction and Wear
Arup Gangopadhyay, Douglas G. McWatt, Robert J. Zdrodowski ......................................................... 63

Effect of Micro-Dimpled Surface on Friction Reduction and Time-to-Beginning-Surface-Scratch in Disc-on-Disc (Cu-Zn Alloy and AISI304) Test

Fretting Wear Behavior of Fiber Reinforced Composite Materials for Implant Applications
S. Achanta, D. Drees, Judith Juhasz, Serena Best, Neil Rushion ................................................................ 70

The Influence of Nanoparticles on the Lubricating Properties of Rapeseed Oil
T. Maliar, H. Cesului, S. Achanta, D. Drees ............................................................................................ 75

High-Temperature Galling Characteristics of Ti-6AL-4V with and Without Surface Treatments
P.J. Blau, D.L. Erdman III, E. Ohriner, B.C. Jolly .................................................................................. 80
Comparative Study
Analysis of Compliant Surface Foil Thrust Bearings and Face Seals Using Coupled Finite Difference
No Ash and Bionotox Engine Oil Based on Polyglycols
Wear of Crankshaft Journal of Reciprocating Engine and Wear-Particle Releasing Behavior
Results
Investigation of the Performance of Highly Loaded Laser Structured Surfaces Part 2: Transient
Quasi Static Results
Investigation of the Performance of Highly Loaded Laser Structured Surfaces Part 1: Theory and
Friction and Wear Maps of Solid Lubricating Coatings, Films, and Powders
The Prediction of Wear Life for Parts of a Rotary Compressor with Carbon Dioxide As a Refrigerant
Element Analysis
Monotonic Stress-Strain Response of Case Hardened Bearing Steels, Part II: Elastic-Plastic Finite
Difficulties in Determining Application Quantities for Rail and Wheel Flange Lubrication
A Generalized Model for Porous Medium Flow in Squeezing Film Situations
Energy Savings and Improved Precision with Adjustable Hydrodynamic Bearings
Prediction of Power Losses in High Speed Rolling Element Bearings Using Thermal Networks
Method
Study of Tribological Properties of Cu-base Sintered Powder Materials Containing Molybdenum
Disulfide and Molybdenum Diselenide Under Unlubricated Conditions
A Generalized Model for Porous Medium Flow in Squeezing Film Situations
Difficulties in Determining Application Quantities for Rail and Wheel Flange Lubrication
Monotonic Stress-Strain Response of Case Hardened Bearing Steels, Part II: Elastic-Plastic Finite
Element Analysis
Tribological Characterization of Surface Engineered Tooling
The Prediction of Wear Life for Parts of a Rotary Compressor with Carbon Dioxide As a Refrigerant
Friction and Wear Maps of Solid Lubricating Coatings, Films, and Powders
Investigation of the Performance of Highly Loaded Laser Structured Surfaces Part 1: Theory and
Quasi Static Results
Investigation of the Performance of Highly Loaded Laser Structured Surfaces Part 2: Transient
Results
Wear of Crankshaft Journal of Reciprocating Engine and Wear-Particle Releasing Behavior
Compositional Effects on the Surface Finish of the PS400 Solid Lubricant Coating
No Ash and Bionotox Engine Oil Based on Polyglycols
Analysis of Compliant Surface Foil Thrust Bearings and Face Seals Using Coupled Finite Difference
and Finite Element Methods

</table>
Impact of Hydromechanical Losses on Hydraulic Pump Efficiency as a Function of Pressure, Temperature and Fluid Viscous Properties ................................................................. 293

Experimental Study on Scuffing/Failure of 1080 Steel and Gray Cast Iron ................................................................. 296
R. Zhang, J.M. Han, O.O. Ajayi, G.C. Barber, Q. Zou, E. Guessous

Comparison of Rolling-Element Fatigue Using Johnson-Weibull Monte Carlo Simulations ................................................................. 299
B. Vlcek, Noel Murray, Robert C. Hendricks, Erwin V. Zaretsky

CFD Analysis for Predicting Windage Power Losses in Spur Gears ............................................................................................ 305
Jose Daniel B. de Mello, Cristiano Binder, Roberto Binder, Aloisio N. Klein

In Situ Formation of Solid Lubricant Particles: A New Way to Obtain Self Lubricating Sintered Steels ................................................................. 308
Kyuhong Han, Sunggi Kim, Kuenchul Song, Sangbeom Kim

Radial Lip Seals – Overview an Function ................................................................. 314
Frank Bauer, Werner Haas

Tribological Testing Methods for the Analysis of Seals ................................................................................................. 315
Frank Bauer, Werner Haas

Thermal Elastohydrodynamic Lubrication of Infinite Line Contact Rough Surfaces Considering Shear Flow Factor ................................................................................................. 320
Hasim Khan, Prawal Sinha

Tribological Characteristics of Low and Zero SAPS Antiwear Additives ................................................................................................. 323
Juliane Benedet, Jonathan H. Green, Gordon D. Lamb, Hugh A. Spikes

A Multiscale Approach of Mixed Lubrication – Application to Mechanical Seals ......................................................................................... 326
Andre Parfait Nyemeck, Noel Brunetiere, Bernard Tournerie

Fabrication of Nano/Micro-Scale Hierarchical Structures for Reducing Adhesion and Friction Forces on Silicon Surfaces ................................................................................................. 329
Duc-Cuong Pham, Kyoughwan Na, Shuxue Fiao, Sungwook Yang, Jinseok Kim, Eui-Sung Yoon

Numerical Modeling of a Hydraulic Elastomeric Rod Seal: From Fem Static Assembling Modeling to Hydrodynamic Seal Analysis ................................................................................................. 333
Aureliano Fata, Mohamed Hajjam

Condition Monitoring of Metalworking Fluid Systems ................................................................................................. 336
Danielle Nelson

AFM and IR Studies of Molecular Assemblies on Silica Nanoasperities for Friction Modification ................................................................................................. 339
James D. Batteas, Bronwyn Harrod, Ryan Jones

Effect of Micro-Dimpled Surface on Friction Reduction and Time-to-Beginning-Surface-Scratch in Disc-on-Disc (Cu-Zn Alloy and AISI304) Test ................................................................................................. 340

Development of Greases with Extended Grease and Bearing Life ................................................................................................. 343
Gareth Fish, William C. Ward Jr.

Behavior of Infinitely Long Radial Journal Bearing Under D-film Cavitation Model ................................................................................................. 346
M.C. Ricci, P.N. Souza

In-Situ Measurements of Lubricant Composition at the Piston and Liner Interface ................................................................................................. 349
Simon A.G. Watson, Victor W. Wong

Tribological Properties of Ultrathin Films in Adhesive and Non-Adhesive Contacts ................................................................................................. 353
Yutao Yang, Marina Rats

A New Method for the Determination of Volatile Organic Compounds in Metalworking Fluids, Vanishing Oils and Rust Inhibitors ................................................................................................. 356
John Burke, Michael Pearce, Bob Blithe, John Howell

Effect of Particle Size on Erosive Wear Performance of Pump Casing Material in Solid Liquid Mixture ................................................................................................. 364
Sanjay Jain

An Analytical Model for the Basic Design Calculations of Journal Bearings ................................................................................................. 370
R.K. Naffin, L. Chang

Effects of Lubricating Oil on Hydrocarbon Emissions from a Spark Ignition Engine ................................................................................................. 373
Pablo C.C. Albuquerque, Ronaldo N.A. Avila, Paola H.B. Zarante, Jose R. Sodre

Behaviour of Lubricant Additives in DLC/DLC and DLC/Steel Contacts ................................................................................................. 376
Balasubramaniam Vengahasamy, Jonathan H. Green, Gordon D. Lamb, Hugh A. Spikes

Pressure Field Measurements of a Circumferential Groove Journal Bearing ................................................................................................. 379
A.F. Cristea, J. Bouyer, M. Fillon, M.D. Pascoevici

Hydraulic Pump Efficiency Testing ................................................................................................. 382
R.I. Davidson, S.J. Higuchi
How Structure Affects Physical Properties in Phosphonium Derived Ionic Liquids ............................................................................................................................... 384
Richard Landisrer, Douglas Harris

Thermal and Roughness Effects on the Performance of a Finite Slider Bearing Considering Heat Conduction Through the Pad ............................................................................................................................... 387
Satish C. Sharma, Vikas M. Phalle, S.C. Jain

Design of Three-Pad Hybrid Air Foil Bearing and Experimental Investigation on Static Performance .......................................................... 390
Daejung Kim, Donghyun Lee

Numerical Study of Metalworking Fluid Flow in the Abrasive Contact Region............................................................................................................................... 393
Stefan Milic, Sorin Cioic, Ioan D. Marinescu, Michael C. Weismiller

Development of a Testing Rig for Erosion with Nanofluids ............................................................................................................................... 396
G. Molina, M. Rahman, C. Walker

Nano-Scale Displacement of a Rough Spherical Shell Loaded Against a Rigid Flat .......................................................................................... 399
Longjin Li, Andrey Orzechenko, Izhak Estrong, Frank Talke

Experimental Investigation on the Influence of Surface Roughnesses and Bearing Materials on the Friction Coefficient During Start-Up ............................................................................................................................... 402
J. Bouyer, M. Fillon, Catalina Dobre

A Transient Analysis of a Wave Journal Bearing Sleeve Motion ............................................................................................................................... 405
Nicoleta M. Ene, Florin Dimofte

Wear Behaviour of PTFE Seals Under Different Pressure Conditions in a Gasoline Pumping and Measurement System ............................................................................................................................... 408

Viscosity and Bulk Modulus Measurements Under High Pressure Conditions ............................................................................................................................... 413
Sebastian Drumm, Alexander Wohlers, Arshia Fatemi, Hubertus Murrenhoff

An Original Double Conical Hybrid Bearing: From Its Design to Its Experimental Use ............................................................................................................................... 417
P. Jolly, O. Bonneau, Jean Frene

A Natural Way to Develop Top-Tier Hydraulic Fluids ............................................................................................................................................................................................... 420
Andy Verganenow

Effect of Surface Topography Modifications on Rolling Contact Fatigue of Mixed Lubricated Contacts ............................................................................................................................................................................................... 423
M. Vrbka, I. Krupka, M. Hartl, P. Svoboda

Comparison of Zinc-containing and Zinc-Free Hydraulic Packages Using Severe Laboratory Performance Tests ............................................................................................................................................................................................... 426
Thomas Ruhle, Steffen Sandhoefer, Thomas Rosrucker

Frictional Behavior in Worn Lubricated Sliding Line Contact ............................................................................................................................................................................................... 427
I. Cracaoanu, D.J. Schipper

New Oil Soluble Polyalkylene Glycols ............................................................................................................................................................................................... 430
Martin Greaves, Nadjet Khelidj, Evelyn Zuugg-Hooszmanns, Ronald van Voorst, Rinus Meertens

On the State and Severity of Frictional Sliding Contacts Between Nominally Flat Metallic Surfaces ............................................................................................................................................................................................... 433
L. Chang, H. Zhang

The Stabilization of Vegetable Oil with Antioxidant Combinations ............................................................................................................................................................................................... 436
Gaston A. Agular, Brian W. Stunkel, Ronald J. Hiza

Comments on Prediction of Flows and Mixing in Vertical Oil Sumps ............................................................................................................................................................................................... 439
Lyle A. Branagan, Parker Wright

Measurement of Static Friction Coefficients and Comparison to Theoretical Models ............................................................................................................................................................................................... 441
Rebecca Ibrahim, Robert L. Jackson, George T. Flowers, Jyoti Ajitsaria, George Vallone

Lubrication of Ti,SiC,SiN,Ni Tribo-couple: from Water to Ethanol ............................................................................................................................................................................................... 444
Jinjun Lu, Shufang Ren, Junhu Meng, Shengrong Yang

Cavitation in Mechanical Seal and Its Effect on Sealing Performance ............................................................................................................................................................................................... 448
Yongjian Li, Weifeng Huang, Shuangfu Suo, Ying Liu, Xiangfeng Liu, Yuming Wang

Review of Varnish Problems of Modern Gas Turbines ............................................................................................................................................................................................... 451
Akira Sasaki, Hideaki Tobissa

The Value of Tribology (Part 1), Analyses from a Macroeconomic Viewpoint ............................................................................................................................................................................................... 503
Akira Sasaki, G.L. Sakhhrani

A Study of a Novel Water Lubricated Hybrid High Speed Bearing with Shallow Stepped Recesses ............................................................................................................................................................................................... 543
Shieli Ma, Pan Dai, Qiuhan Ma, Hua Xu

Satish C. Sharma, Nathi Ram, S.C. Jain

Performance of Noncircular 2-Lobe Multirecess Constant Flow Valve Compensated Hybrid Journal Bearing by Considering Wear ............................................................................................................................................................................................... 550
Satish C. Sharma, Vikas M. Phalle, S.C. Jain
