2010 Fourth International Conference on Secure Software Integration and Reliability Improvement Companion

(SSIRI-C 2010)

Singapore
9 – 11 June 2010
2010 Fourth IEEE International Conference on Secure Software Integration and Reliability Improvement Companion

SSIRI-C 2010

Table of Contents

Message from Steering Committee Chairs .................................................................viii
Message from the General Chair ................................................................................ix
Message from the Program Chairs ..........................................................................x
Organizing Committee ...............................................................................................xi
Program Committee ....................................................................................................xii
Steering Committee .....................................................................................................xv
Additional Reviewers .................................................................................................xvi
Keynote Abstracts ........................................................................................................xvii

Student Doctoral Program

An Automatic Approach to Model Checking UML State Machines .........................................................1
    Shao Jie Zhang and Yang Liu

An Automatic Approach to Verify Sensor Network Systems .................................................................7
    Man Chun Zheng

An Approach to Achieving the Reliability in TV Embedded System .......................................................13
    Dusica Marijan, Nikola Teslic, Vukota Pekovic, and Tarkan Tekcan

Modeling and Analysis of Advanced Automotive ECU Architectures at Early Design Stages Using EMF and Model Transformation .................................................................18
    Christoph Lauer, Reinhard German, and Jens Pollmer

Fast Abstracts

An Efficient Method of Probabilistic Model Checking ...........................................................................24
    Songzheng Song

Constraint Checking for XML-Based Language Specification by SAT Solver .............................................26
    Hao Xiao, Zheng Wang, Gegang Pu, and Bin Gu

Parallel Lexical Analyzer on the Cell Processor ......................................................................................28
    G. Umarani Srikanth
Model Checking C# Code: A Translation Approach .................................................................30
Huiquan Zhu

Structured Assurance Case Methodology for Assessing Software Trustworthiness .........................32
Elizabeth Fong, Michael Kass, Thomas Rhodes, and Frederick Boland

The Problem of Usable Binary Authentication ..............................................................................34
Yongzheng Wu and Roland H. C. Yap

Towards Verification of a Service Orchestration Language ..........................................................36
Tian Huat Tan

Workshop on Model-Based Verification and Validation

Design Patterns for Integrating Variability in Timed Automata .......................................................38
Ralf Mitsching, Carsten Weise, and Stefan Kowalewski

Towards Test Case Generation for Synthesizable VHDL Programs Using Model Checker .................46
Tolga Ayav, Tugkan Tuglular, and Fevzi Belli

Modeling Efficient Multi-chained Stream Signature Protocol Using Communicating Sequential Processes ........................................................................................................54
Ahmet Koltuksuz, Murat Ozkan, and Burcu Kulahcioglu

Event- and Coverage-Based Testing of Web Services ........................................................................62
André Takeshi Endo, Michael Linschulte, Adenilso da Silva Simão, and Simone do Rocio Senger de Souza

Generalized Partial Test Case Generation Method ..........................................................................70
Lehilton Lelis Chaves Pedrosa and Arnaldo Vieira Moura

Are Longer Test Sequences Always Better? - A Reliability Theoretical Analysis ....................................78
Fevzi Belli, Nevin Güler, and Michael Linschulte

Utilization of Timed Automata as a Verification Tool for Security Protocols ...................................86
Ahmet Koltuksuz, Burcu Kulahcioglu, and Murat Ozkan

Workshop on Model Checking Secure and Reliable Systems

Classification of Static Analysis-Based Buffer Overflow Detectors ................................................94
Hossain Shahriar and Mohammad Zulkernine

Formal Analysis for Stateflow Diagrams .......................................................................................102
Chunqing Chen

Job-Shop Scheduling Problems Using Timed Planning ......................................................................110
Xian Zhang

Quantitative Evaluation of Related Web-Based Vulnerabilities .......................................................118
Deepak Subramanian, Ha Thanh Le, Peter Kok Keong Loh, and Annamalai Benjamin Premkumar

Using Multi Decision Diagram in Model Checking .......................................................................126
Nguyen Truong Khanh and Quan Thanh Tho

Analysing System Failure Behaviours with PRISM .....................................................................130
Xiaocheng Ge, Richard F. Paige, and John A. McDermid

vi
Yet Another Model Checker for PROMELA - The Transformation Approach .......................................................... 137

WenDi Zhao

Modeling and Verification of Transmission Protocols: A Case Study on CSMA/CD
Protocol ........................................................................................................................................................................... 143

Ling Shi and Yan Liu

MAFSE: A Model-Based Framework for Software Verification .......................................................................................... 150

Tho T. Quan, Duc L. N. Hoang, Binh T. Nguyen, An N. Nguyen, Quan D. Tran,
Phung H. Nguyen, Thang H. Bui, Anh T. Do, Linh V. Huynh, Nam T. Doan,
Nguyen T. Huynh, Thien D. Nguyen, Tam T. Nguyen, and Vu H. Nguyen

Modeling and Verifying Security Protocols Using PAT Approach ................................................................. 157

Luu Anh Tuan

Author Index .............................................................................................................................................................................. 165
