# TABLE OF CONTENTS

## VOLUME 1

### Opening Remarks.......................................................... 1
  Graeme M. Burt

### Keynote Address: Smart Grids: To Boldly Go! ......................................................... 7
  John Scott

### Adequacy Assessment of Composite Power Systems Through Hybridization of Monte Carlo Simulation and Artificial Immune Recognition System ........................................ 27
  Lingfeng Wang, Chanan Singh

### Verification of a Probabilistic Model for a Distribution System with Integration of Dispersed Generation.................................................. 34
  Peiyuan Chen, Zhe Chen, Birgitte Bak-Jensen, Rasmus Waagepetersen, Stefan Sörensens

### Active/Reactive Market Model Based on Adjustment Bids and Integrating Capacitor Banks and Transformer Taps........................................ 41
  João Tomé Saraiva, Mário Helder Gomes

### Transmission Network Expansion Planning Under Deliberate Outages ........................................ 49
  Natalia Alguacil, Miguel Carrión, José M. Arroyo

### Composite-System Generation Adequacy Planning Using Stochastic Programming with Sample-Average Approximation........................................ 56
  Panida Jirutittijaroen, Chanan Singh

### Effects of Gas-Production Constraints Over Generation Expansion................................. 62
  Efraim Centeno, Juan José Sánchez, Julián Barquín, Álvaro López-Peña

### A Tool for Reconfiguration of Large-Scale Distribution Networks........................................ 69
  A. González, F.M. Echavarren, L. Rouco, T. Gómez

### Optimal Zero Injection Considerations in PMU Placement: An ILP Approach............................... 76
  Sanjay Dambhare, Devesh Dua, Rajeev Kumar Gajbhiye, S.A. Soman

### Advanced Tools in Emergency Control Systems................................................................. 82
  N.I. Voropai, D.N. Efimov, P.Y. Etingov, E. Handschin, C. Rehnaz

### The Feasibility Study of Ancillary Services Provision from Multiple Micro-Grids...................... 89

### Impact of Prohibited Operating Zones of Generating Units on Locational Marginal Prices.................. 98
  Hossein Daneshi, Mohammad Shahidehpour, Ali Daneshi

### The Assessment of Power System Vulnerability Induced by Lack of Reactive Power Resources Following Severe Contingencies........................................ 104
  C. Genesi, P. Marannino, M. Montagna, F. Zanellini, M. Innorta

### Influence of Price Forecasting on Short-Term Thermal Scheduling with Environmental Concerns................................................................. 111
  J. Catalão, S. Mariano, V. Mendes, L. Ferreira

### A New Fault Location Algorithm for Use with Current Differential Protective Relays of Two-Terminal Line........................................................................ 117
  Jan Izykowski, Eugeniusz Rosolowski, Murari Mohan Saha

### Stability of the Power Systems in Case of Large Wind Penetration and Battery Application................................. 123
  Ervin Spahic, Arefeh Danesh Shakib, Gerd Balzer

### Accurate Location of Faults on Three-Terminal Line with Use of Three-End Unsynchronised Measurements.................................................................. 129
  Jan Izykowski, Eugeniusz Rosolowski, Rafal Molag, Przemyslaw Balcerew, Marek Fulczyk, Murari Mohan Saha

### Exploiting Automated Demand Response, Generation and Storage Capabilities for Hierarchical Frequency Control in Islanded Multi-Microgrids................................. 136
  Nuno José Gil, J. Lopes

### Application of Online Coordinated Voltage Control Using Optimal Power Flow to a Large-Scale Power Grid................................................................................. 143

### HOPF Bifurcations in the IEEE Second Benchmark Model for SSR Studies........................................ 149
  Yasar Kaucikefe, Adnan Kaypmaz

### On the Frequency Stability of Power Systems and Its Statistic Characteristics................................. 156
  Y. Yu, H. Wu, H. Xin, D. Gan, Z. Han

### Robust Controller Based on Thyristor-Controlled Phase Shifter............................................... 163
  Sylwestery Robak, Desire D. Rasolomampionona
Advanced Signal Processing Methods for Evaluation of Harmonic Distortion Caused by DFIG Wind Generator ................................................................. 170
Przemysław Janik, Zbigniew Leonowicz, Jucek Rezmer, Steffen Schostun, Detlef Schulz
Fault Ride-Through of DFIG-Based Wind Farms Connected to the Grid through VSC-Based HVDC Link................................................................. 177
Christian Felten, Holger Wrede, Friedrich Koch
Steady State Models of Low-Energy Consumption Light Sources ................................................................. 184
Charles Cresswell, Sala Djokic
Estimating the Probability of Cascading Outages in a Power Grid ................................................................. 191
Stephen T. Lee
Microelectronic Emulation for Power System Computation ................................................................. 197
Ira Nagel, Divitha Seetharamadoo, Laurent Fabre, R. Cherkaoui, Maher Kayal
Modeling of Aero and Structural Dynamics of Wind Turbines for Power System Studies ................................................................. 204
G. Ramharan, N.D. Caliao, E. Bossanyi, N. Jenkins
Reliability Analysis for Protection Relays ................................................................................................................................. 210
Hideyuki Kameda, Koji Yamashita
Dynamic Stability Investigations of the Fault Ride-Through Capabilities of a Wind Farm ................................................................. 216
Arthur Ekvue, Oona Nanka-Bruce, Jhansi Rao, Damien McCool
Evaluating the Distance Towards ‘Elf-Healing’ Power Systems ................................................................................................................................. 223
Jacques Deuse, K. Karoui, Sébastien Grenard, M. Stubbe
A New Method for Treatment of Equality Constraints in Power System State Estimation ................................................................. 231
G.N. Korres
Simulating the Impact of Design-Stage Uncertainties on PV Array Energy Output Estimation ................................................................. 238
Bernard Bekker, Trevor Gaunt
A New Approach on Implementing Hybrid Dynamic Simulation Based on Wide Area Measurements ................................................................. 245
Dong Han, Jin Ma, Wenjin Sheng, Renmu He, Chengyan Yue, Jin Zhang, A. Germond
Probabilistic Load Flow with Wind Production Uncertainty Using Cumulants and Cornish Fisher Expansion ................................................................................................................................. 251
Julio Usaola
Comparative Evaluation of Discrete-Time Dynamic Models of TCSC ................................................................................................................................. 258
S.R. Joshi, A.M. Kulkarni
Template Based Engineering of Substation Automation Systems with the IEC 61850 Functional Naming Concept ................................................................................................................................. 265
H. Davideczak, H. Englert
Large Scale Security Constrained Optimal Power Flow ................................................................................................................................. 271
K. Karoui, H. Crisciu, A. Szekat, M. Stubbe
On PV-PQ Bus Type Switching Logic in Power Flow Computation ................................................................................................................................. 278
Jinqian Zhao, Hsiao-Dong Chiang, Hua Li, Ping Ju
Optimal Operation of Hybrid PV/FUEL Cell System with Focus on Uncertainty Modelling ................................................................................................................................. 285
V.S. Pappala, I. Erlich
Power System Stabilizer by Using Supplementary Remote Signals ................................................................................................................................. 292
A.A. Hashmami, I. Erlich
On the Fairness of Centralised Decision-Making Strategies in Multi-TSO Power Systems ................................................................................................................................. 299
Yannick Phulpin, Miroslav Begovic, Marc Petit
Long Run Optimal Response to Real Time Pricing Rates ................................................................................................................................. 306
Chua-Liang Su, Daniel Kirschen
Dispersed Energy Resources Scheduling for the Intentional Islanding Operation of Distribution Systems ................................................................................................................................. 314
A. Borghetti, M. Bosetti, C.A. Nucci, M. Paolone
Long Term Dynamics of Islanded Coal Fired Station with Fluctuating Loads ................................................................................................................................. 322
J.E. Mayer, K.S. Smith
Fault Location for Underground Systems with Capacitive Current Compensation ................................................................................................................................. 328
André D. Filomena, Mariana Resener, Rodrigo H. Salim, Arturo S. Bretas
Enhanced Segmentation of Disturbance Records by Adaptive Thresholding ................................................................................................................................. 335
Philipp Stachel, Rastko Zivanovic, Peter Schegner
Determination of the Capacity and Performance of Battery Energy Storage Systems Used in Renewable Power Generation Schemes ................................................................................................................................. 342
D.L. Yao, S.S. Choi
A New Method for Pricing of Wind Power in Short-Term Power Markets ................................................................................................................................. 349
Mohsen Parsa Moghaddam, Ebad Talebi Ghadikolayi, Mustafa Mohamadian
Cultured Differential Computation Algorithm for Optimal Contracted Capacity of Power Consumer with Self-Owned Generating Units
Hong-Tzer Yang, Pai-Chun Peng, Shih-Ching Guo

Multi-End Traveling Wave Fault Location Based on Current Traveling Waves
Abdesalam Elhaffar, Matti Lehkonen

A Novel Centralised Wind Farm Controller Utilising Voltage Control Capability of Wind Turbines
Jens Fortmann, Michael Wilck, Friedrich Koch, L. Erlech

Parallel Computation of Large Power System Network Solutions Using the Multi-Area Thévenin Equivalents (MATE) Algorithm
Marcelo A. Tomim, José R. Martí, Lei Wang

Hidden Failure Risk Assessment and On-Line Adaptive Relay Coordination Based on Risk Minimization
Boming Zhang, Ying Ly, Wenchuan Wu

Transient Stability Constrained Optimal Power Flow Using Evolutionary Programming
K. Tangpatpisan, A. Yokoyama

A Practical Time-Domain Fault Current Analysis Using EMTP
Ryna Tanabe, Yauyuki Tada

Strategies for the Efficient Integration of Wind Energy Into Electricity Markets
Daniel Winet, Woldemar Schutz, C. Rehtanz, E. Handschin

Hysteric Iron-Core Inductor for Transformer Inrush Current Modelling in EMTP
Nicola Chiesa, Hans K. Hoidalen

A New Approach for Modeling Complex Power System Components in Different Simulation Tools
Per-Erik Bjorklund, Jiaping Pan, Chengyan Yue, Kailash Srivastava

A Grid Operation Model: Resource Demand for an Adequate Quality of Supply
Michael Guarisco, Catharina Friedrich, Marco Laumanns, Markus Zdralle

Optimal Fault Analysis Formulation for Unbalanced Distribution Systems Considering Fault Resistance Estimation
André D. Filomena, Mariana Resener, Rodrigo H. Salim, Arturo S. Bretas

Model Quality in Large Interconnected Power Grids
Jay Britton, Kendall Demaree

Maximum Efficiency Point Tracking for Adjustable-Speed Small Hydro Power Plant
A. Borghetti, M. De Silvestro, G. Naldi, M. Paolone, M. Alberti

Analysis of the Use of PTDF in the UCTE Transmission Grid
Christof Duthaler, Marc Emery, Goran Andersson, Martin Kurzidem

Total Transfer Capability Computation and Improvement in Interconnected Electric Power Systems
F.M. Echavarren, E. Lobato, L. Rouco

Investigation of Voltage Disturbances in a Typical Pharmaceutical Customer Facility
Sarat Chandra Vegunta, J.V. Milanovic

Short-Term Wind Power and Speed Forecasting Using Simultaneous Perturbation Stochastic Approximation Algorithm
Ying-Yi Hong, Hui-Lin Chang, Ching-Sheng Chiu

A Dynamic Power Flow Controller for Power System Stability Improvement and Loss Reduction
Nicklas Johansson, Lennart Angquist, Hans-Peter Nee, Bertil Berggren

Identification of Coherent Generators Using PCA and Cluster Analysis
Abdulaziz M. Almutairi, Soon Kiat Yee, J.V. Milanovic

Turhan Demiray, Goran Andersson

Optimized Fault Location Formulation for Unbalanced Distribution Feeders Considering Load Variation
Mariana Resener, Rodrigo H. Salim, André D. Filomena, Arturo S. Bretas

Integrated Pool/Bilateral/Reserve Electricity Market Operation Under Pay-as-Bid Pricing
Fabio Stacke, Pablo Cuervo

Is There a Need for Benchmarking Power System Stability Simulation Tools?
K.K. Kaberere, A.I. Petroianu, K.A. Folly

Evaluation of Transmission Line Fault-Locating Techniques Using Variance-Based Sensitivity Measures
Rastko Zivanovic

A Backstepping Control to Enhance the Performance of Transformer-Less Dynamic Voltage Restorers
Guo-Jie Li, T.T. Lie, Jia-Wei Hu
Using Cooperative Game Theory in Energy Supply Planning Tasks .......................................................... 533  
V. Neimane, A. Sauhats, J. Inde, G. Vempers, G. Bockarjova

Impact of a SSSC-Based Power Flow Controller on SSR ........................................................................ 541  
R. Pillay Carpanen, B.S. Rigby

Self-Adaptive and Robust Method for Distribution Network Load and State Estimation .......................... 549  
Jianzhong Wu, N. Jenkine

On-line Stable State Determination in Decentralized Power Grid Management ................................................ 555  
E. Handschin, C. Rothdanz, H.F. Wedde, O. Krause, S. Lehnhoff

Identifying Sources of Damping Issues in the Icelandic Power System .................................................... 563  
Douglas Wilson, Karine Hay, Patrick McNab, B. Bialek, Zhigive Lubosny, Nils Gustavsson, Ragnar Gudmansson

Condition Assessment of Power System Equipment the Impact of Ageing and Deterioration ......................... 571  
Athanasis Kronitis, Gerd Balzer

Failure Distribution of Repairable Units Approximation Through Markov Chains ...................................... 576  
Athanasis Kronitis, Gerd Balzer

A Power Market Model for studying the Impact of Wind Power on Spot Prices ........................................... 582  
Thomas Trotscher, Magnus Korups

Dynamic Behaviour of Single-Phase Induction Generators During Disconnection and Reconnection to the Grid ..................................................................................................................... 590  
J. Ramachandran, G.A. Putrus

An Efficient Voltage and Reactive Power Control Simulation Using Long Term Dynamics Simulation .......... 597  
Masaki Nagata, Toshio Inoue

Opportunities for Managing Consumptions and the Interaction with Energy Networks ............................ 604  
Diana Moneta, Giuseppe Mauri, Paolo Gramatica

Modelling of Network-Component-Technology Changes in Reliability-Centered Maintenance Planning ................................................................................................................. 611  
Gerhard Theil

Simplified Calculation of Voltage and Loss Sensitivity Factors in Distribution Networks .......................... 618  
Qiong Zhou, J. Bialek

Analysis of Phase Angle Differences Application to Improve the SPS Complex Performance ..................... 624  
Ekaterina Kostertina, Natulia Bondareva, R. Cherkaoui, A. Germond, Andrey Grobovoy

A Method for Balancing Supply and Demand in an Isolated System Consisting of Voltage Control Type QCCS in Friends ........................................................................................................ 632  
Mitsushiro Ako, Ryoichi Hara, Hiroyuki Kita, Jun Hasegawa

Monitoring and Estimation of Interarea Power Oscillation Mode Based on Application of Campuswams ......................................................................................................................... 640  
Bart C. Ummels, Madeleine Gibescu, Wil Kling, Gerardus C. Paap

An Application of the Energy and Transmission Price Conjecture in an Oligopolistic Power Market ............. 647  
Changsong Li, Kenichiro Higuma, Masayuki Watanabe, Yasunori Mitani

Decomposed Electricity and Natural Gas Optimal Power Flow .................................................................. 654  
Michele Arnold, Goran Andersson

Identification of Circular Flows in Transmission Networks Using the Electricity Tracing Methodology ........ 661  
Stanslaw Ziemianek, J. Bialek

Technological Breakthroughs in System Integrity Protection Schemes ....................................................... 666  
Vahid Madani, Damir Novosel, Roger King

Development of a Simulation Model for Secondary Control Performance Assessment with Significant Wind Power in a Market Environment ........................................................................... 674  
Douglas Wilson, Karine Hay, Patrick McNab, B. Bialek, Zhigive Lubosny, Nils Gustavsson, Ragnar Gudmansson

Decentralized Unit Commitment and Dispatch for the Distribution Systems Using Intelligent Agents Approach ......................................................................................................................... 682  
Elvira Kaegi, R. Cherkaoui, A. Germond

Fault Section Estimation in Electric Power Systems Using an Artificial Immune System Algorithm .......... 690  
Fábio Berteghini Ieão, Rodrigo A.F. Pereira, José R.S. Mantovani

Fault Location Algorithm for Primary Distribution Feeders Based on Voltage SAGS ............................... 697  
Rodrigo A.F. Pereira, Mladen Kezunovic, José R.S. Mantovani

Quantitative Risk Assessment in Distribution System Maintenance Management Using Bow-Tie Modeling ................................................................................................................................. 704  
Dag Eirik Nordgård

Fundamental Analysis of the Synchronous Generator – TCSC System Using the ICAD Framework ................ 711  
Carlos Ugalde, Enrique Acha, Eduardo Licaèaga-Castro, Luigi Vantreppi

T. Mirbach, B. Blaesig, P. Baltes, H-J. Haubrich

A Comparative Study of Two Forward Dynamic Programming Techniques for Solving Local Thermal Unit Commitment Problems

Maria Gabriela Martinez, Claudia Sagastizabal

A Stochastic Approach for Modeling Residential Interruption Costs

Karin Alvehag, Lennart Soder

Identification of Cascaded Generator Over-Excitation Tripping Events

Juan Li, Koji Yamashita, Chen-Ching Liu, Pei Zhang, Michael Hofmann

State-Space Transmission Line Model with Frequency-Dependency and Long-Line Effects Based on a Singular Approximation and Balancing-Free Square-Root Approach

Norberto Garcia, Enrique Acha

Coordinated Transmission and Generation Planning to Increase the Electricity Market Efficiency

Power System Modeling for a Fully Transparent Distribution Management System

Monika Ruh, Goran Andersson, Andreas Borer

An Accurate and Efficient Current Injection Method for the Determination of the System State During Line Outages

Gabriela Hug-Glanzmann, Goran Andersson

A Contribution to the Formulation of Production Cost Models of Liberalised Electricity Markets

David Martinez, Sven Filter, Bernhard Graeber

VOLUME 2

Reliability of the Protection System and its Impact on the Reliability of Supply

Oddbjørn Gjerde, Gerd H. Kjølle, Jørn Heggset

Comparison of Practical Fault Ride-through Capability for MV-Connected DG-units

E. Coster, Anton Ishchenko, J. Myrzik, Wil Kling

Wide Area Voltage Regulation & Protection

Sandro Corsi

Including Thermal Unit Start-Up Costs in a Long-Term Hydro-Thermal Scheduling Model

Geir Warland, Arne Haugstad, Einar Ståle Huse

Integration of Distributed Generation in Distribution Networks: Regulatory Challenges

Pablo Frias, T. Gómez, Juan Rivier

Responsive Demand to Increase the Value of Wind Power

Vandad Hamidi, Furong Li

Impact of Voltage and Reactive Power Control Devices on the Reliability Assessment of Radial Distribution Networks

A. Coelho, A.B. Rodrigues, M.G. Da Silva, R.B. Prada

A Synchrophasor Measurement Algorithm Suitable for Dynamic Applications

Jacques Warichet, Tevfik Sezi, Jean-Claude Maun

Investigation of a Local Indicator of Voltage Emergency in the Hellenic Interconnected System

C. Vournas, N. Sakellaridis, G. Christoforidis, J. Kabouris, T. Van Cutsem

Assessment of the Need for Transmissions in the Future All-Island System in Ireland

D.P. Nedic, K.R. Bell

Optimal Bidding Strategy for Mixed-Portfolio Producers in a Dual Imbalance Pricing System

Madeleine Gibescu, Erik W. van Zwet, Wil Kling

Efficient Secure AC OPF for Distributed Generation Uptake Maximisation

C.J. Dent, L.F. Ochoa, G.P. Harrison, J. Bialek

Experimental Setup of a System for Damping Torsional Vibrations Caused by SSO

Thomas Zöller, T. Leibfried, Amir M. Miri

Harmonic Interactions and Resonance Problems in Large Scale LV Networks

M.C. Benhabib, P.R. Wilczek, J. Myrzik, J.L. Duarte

A Novel Phasor Estimation Algorithm Based on Taylor Expansion and Phasorlet

R. Mai, Z. He, B. Kirby, A. Edwards, Z. Bo, L. Fu

Propects of an Improved System Protection Scheme Against Voltage Instability in the RTE System

F. Capitanescu, B. Otonea, H. Lefebvre, V. Sermanson, T. Van Cutsem
Topological Properties of Radial Networks with Application to Computer Aided Distribution Reconfiguration

Alena Kosfalova, Pedro M.S. Carvalho

Automated Analysis of Digital Fault Recorder Data in Power Generating Plants

Miguel Moreto, Jacqueline G. Rolin

Application of Metamodeling Techniques to Power Transfer Capability Analysis of Manitoba-Ontario Electrical Interconnections

Wenjie Zhang, Myrna Carew, Songying Shan, G. Gary Wang

Optimal Placement of Phasor Measurements for Enhanced State Estimation: A Case Study

Roozbeh Emami, Ali Abar, Floyd Galvan

A New Out-of-Step Protection Scheme Via Gpsynchronized Data

A.P. Meliopoulos, Vangelis Farantatos, George Kokkinides, Salman Mohagheghi, George Stefopoulos

Multi Evaluation Method of Distribution Network with Distributed Generators

Yasuhiro Hayashi, Shoji Kawasaki, Junya Matsuki, Shigekazu Sakai, Yoshiaki Fuwa, Kenjiro Mori

Determinition of Optimal Control Parameters of Line Drop Compensator in Distribution Network with Distributed Generators

Yasuhiro Hayashi, Junya Matsuki, Kenjiro Mori, Yui Hanai, Yoshiaki Fuwa

Development and Evaluation of Microgrids Islanded Operation Method with Demand Side Control

Seiji Tagami, Yuta Sasaki, Tatsuya Tsukada, Tsutomu Tokumoto, Junichi Ichimura, Yuji Watanabe, Hiroshi Asano, Shigeru Bando

An Innovative Modular Multilevel Converter Topology and Modulation Control Scheme for the First VSC-HVDC Project in China

Guanjun Ding, Ming Ding, Guangyi Tang

A Case Study of Application Service in Grid-Based Future Control Centers

H.F. Zhou, F.F. Wu

Calculation of Residential Interruption Costs Caused by Adverse Weather Using Monte Carlo Methods

Elin Brostrom, Karin Alvehag, Lennart Soder

Mid Size Energy Storages in Distribution Networks – Optimal Sizing and Management

Dirk Westermann, Steffen Nicolai, Peter Bretschneider, Steffen Schlegel

Combined Heat and Power Economic Dispatch by Augmented Lagrange Hopfield Network

Vo Ngoc Dieu, Weerakorn Oongsakul

Possibilities to Improve Reliability of Distribution Network by Intended Island Operation

Jussi Antikainen, Sami Repo, Pekka Verho, Pertti Järventausta

Fundamental Frequency Estimation Using the Difference Between the Magnitude Gains of Cosine and Sine Filters

Soon-Ryul Nam, Joon-Ho Choi, Hue-Kon Nam, Sang-Hoe Kang, Min Hur

A New Approach for an Earth Fault Distance Localisation Algorithm in Compensated Networks

Georg Achleitner, Clemens Obkircher, Lothar Fickert, Manfred Sakulin

Switching Overvoltages in a 400-KV Cable System

Mustafa Kizilcay

State Estimation of Radial Distribution Networks: A Novel Procedure for Measurement Siting

Fabio Bignucolo, Roberto Caldon

A Multivariate Descriptor for Change Point Detection in Nonlinear Time Series

P.P. Balestrassi, A.P. Paiva, A.C. Soares, J.B. Turrioni

Assessment of Decentralized Model Predictive Control Techniques for Power Networks

Armand Damoiseaux, Andrej Jokic, Mircea Lazar, Alessandro Alessio, Paul van den Bosch, Ian Hiskens, Alberto Bemporad

State Space Estimation of Electric Arc Parameters Based on Maximum Likelihood and Kalman Filters

Otto W. Ganvini Asencios, Antonio C.S. Lima

Dynamic Model Validation of the Icelandic Power System Using Wams-Based Measurement of Oscillatory Stability

Patrick McNabb, Douglas Wilson, Karine Hay, J. Bialke

Real-Time Control of Power Systems Using Nodal Prices

Andrej Jokic, Mircea Lazar, Paul van den Bosch

Bilateral Contracts Management in Hydrothermal Generation with Available Energy Risk

Juan Carlos Matias, Pablo Cuervo, Denis Perez Janmazzi

Computation Dimensioning of a Sodium-sulphur Battery As a Backup of Large Wind Farm

Arefeh Danesh Shokib, Ervin Spahic, Gerd Balzer

Optimal Investments in Generation Capacity Under Uncertainty

Raquel Garcia-Bertrand, Daniel Kirschen, Antonio J. Conejo
Dynamical Simulation of a Vacuum Switch with PSCAD .................................................................................. 1080
T. Wenzel, T. Leibfried, D. Retzmann

Wavelets and Prony Method for Disturbance Detection in Wind Farms ............................................................ 1085
Tadeusz Lobos, Jacek Rezmer, Przemysław Janik, Hortensia Amarís, Carlos Álvarez, Diana Flórez

Probabilistic Evaluation of Reserve Requirements of Generating Systems with Renewable Power Sources: The Portuguese and Spanish Cases .............................................................................. 1092

Evaluating Investment Deferral by Incorporating Distributed Generation in Distribution Network Planning ............................................................................................................................................. 1099
D. T-C. Wang, L.F. Ochoa, G.P. Harrison, C.J. Dent, A.R. Wallace

Application of Evolutionary Multi Objective Optimization Algorithm to Optimal VAR Expansion and ATC Enhancement Problems ........................................................................................................ 1107
Mehdi Eghbali, Naoto Yorino, Yoshifumi Zoka, E. El-Araby

Restoring Solution for Unsolvable Power Flow: An Approach Using the Augmented Lagrangian Algorithm .................................................................................. 1114
Luciano V. Barbosa, Juliano B. Francisco, Márcio C. Zambalıdi

A Holistic System Modelling Approach for Marine Power Systems .................................................................. 1121
J.D. Schuddebeurs, P.J. Norman, S.J. Galloway, C.D. Booth, G.M. Burt, J.R. McDonald, J. Apsley

A Scheme for Incentivizing Investments and Cost Sharing in Transmission Enhancements ............................ 1129
Javier Contreras, George Gross, Isabel Ruíz–Gómez, José M. Arrayo

An Equilibrium Model for Medium-Term Power Planning Considering Risk Averse Generation Companies ................................................................................................................................. 1139
Matteo Tesser, Narcis Nabona

Modelling and Analysis of the Enhanced TAPP Scheme for Distribution Networks ........................................ 1147
Maciej Filá, Jonathan Hiscock, Gareth A. Taylor, Malcolm R. Irving, Peter Lang

Comparison of Measurement Placement Algorithms for State Estimation Based on Theoretic and Eigenvector Centrality Procedures .................................................................................. 1154
Michael Hurtgen, Pavel Praks, Petr Zajic, Jean-Claude Mann

Advantages of Power System State Estimation Using Phasor Measurement Units ............................................. 1161
Michael Hurtgen, Jean-Claude Mann

Long-Term Hydrothermal Scheduling Via Meta-Heuristics ................................................................................ 1168
Alexandre F. Amendola, Alexandre P. Alves da Silva

Effect of Ancillary Service Market Design on Control Performance of Power Systems ..................................... 1174
Jyotirmoy Roy, Anjan Bose, Jin Price

Operation and Control of NAS Batteries on a University Campus ................................................................. 1180
Kenji Iba, Kouji Tanaka, Kansaki Yabe

Optimal Operational Strategies for Multi-Generation Systems ......................................................................... 1188
Gianfranco Chicco, Pierluigi Mancarella

A Unified Approach for Bad Data and Topology Error Identification in Generalized State Estimation ............ 1195
Elzeeta Maria Lourenço, Leandro Batista de Souza, Antonio Simões Costa

Pricing Electricity Flexible-Forward Contracts Considering Duties and Tributes .............................................. 1202
Leticia Takahashi, Laura Keiko Gunn, Paulo B. Correia

Influence of the Emissions Trading Scheme on Market Clearing ........................................................................ 1208
Ivana Kockar, Antonio J. Conejo, J.R. McDonald

Structural Vulnerability of Energy Distribution Systems; Incorporating Infrastructural Dependencies ............ 1215
Arlí Helseth, Arne T. Hølen

Multi-Agent System for Short and Long-Term Power Market Simulations ......................................................... 1222
Jianhui Wang, Aulin Botterud, Guenter Conzelmann, Vladimir S. Koritarov

Solving the Hydrothermal Unit Commitment Problem Via Lagrangian Relaxation and Augmented Lagrangian .................................................................................................................................. 1229
Rafael Nilson Rodrigues, Edson Luiz da Silva, Erolin Cristian Finardi

Multi-Scale Simulation of Multi-Machine Power Systems ................................................................................. 1236
Feng Gao, Kai Strunz

Solving the Short Term Operating Planning Problem of Hydrothermal Systems by Using the Progressive Hedging Method ............................................................................................................. 1243
Marcelo L.L. dos Santos, Edson Luiz da Silva, Erolin Cristian Finardi, Raphael E. C. Goncalves

Identification of Interacting Power System Dynamic Phenomena Via Continuation of Invariant Subspaces ............................................................................................................................ 1250
Cheng Luo, Venkataramana Ajjarapu

Measuring Reliability (OR RISK) Coherently ..................................................................................................... 1257
Felix F. Wu, Hui Zhou, Yanhe Hou
Probability Distribution Functions of Generator Profit from Spot Market ................................................................. 1261
Yuhan Hou, Felix F. Wu

Linearisation of Non-Linear Loads by Phase Dependent Frequency Coupling Admittance Matrices ............................................. 1267
Lance P. Frater, Alan R. Wood, Neville R. Watson

An Agent Technology Based Method for Power System Topology Verification with Use of Radial Basis Function Networks ........................................................................................................................................ 1274
Robert Lukomski, Kazimierz Wilkosz

Assessing Load Forecast Uncertainty Using Extreme Value Theory ........................................................................ 1281
Chonglai Hor, Simon Watson, David Infield

Frequency Scanning Techniques for Analysis of the Effect of Device Dependent Subsynchronous Oscillations on Subsynchronous Damping ...................................................................................... 1288
Tuomas Rauhala, Perti Järventausa

Calculation of Grid Losses with the Aid of Stochastic Modeling of Wind Turbines and Loads ................................................. 1295
P. Zonneveld, G. Papathanasiou, E. Coster, L. van der Sluis

A Hybrid Approach for Modeling Electricity Price Series in the Medium Term ........................................................................ 1302
Javier Garcia-González, Julián Barquin, Pablo Dueñas

Evaluating the Capacity Value of Wind Generation in Systems with Hydro Generation .............................................................. 1308
Manuel J Castro, Anser A Shakoor, Danny Pudjianto, Goran Sirbac

Long Term Optimization for Risk Oriented Asset Management .............................................................................................. 1316
E. Handschin, Ingo Jürgens, Claus Neumann, C. Rehtanz

Effects of Rogowski Coil and Covered-Conductor Parameters on the Performance of PD Measurements in Overhead Distribution Networks .......................................................................................................................... 1323
G. Murtaza Hashmi, Matti Lehtonen

A GPS Synchronized Current Differential Protection of Transmission Lines ........................................................................ 1330
Sanjay Dambhare, S.A. Soman, M.C. Chandorkar

Islanding Detection and Smooth Shift to Independent Operation by Use of SMES ........................................................................ 1336
Yasuyuki Shirai, Tanzo Nitta, Katsuhiko Shibata

A Stochastic Programming Approach to Quantifying Effects of Contingencies on Locational Marginal Prices .................................................................................................................................................. 1342
Andrija T. Saric, Frederic H. Murphy, Allen L. Soyster, Aleksandar M. Stankovic

Long Term Nodal Pricing and Transmission Costing ........................................................................................................................................ 1349
Nicolas Omont, Arnaud Renaud, Patrick Sandrin

Maximizing Reliable Service by Coordinated Islanding and Load Management in Distribution Systems Under Stress ........................................................................................................................................ 1356
Marija Prica, Marija Ilie

Optimal Planning of Active Networks ........................................................................................................................................ 1362
G. Celli, F. Pilo, G. Pisano, G.G. Soma

Reduction of Wind Farm Models Using the Coherency Approach .............................................................................................. 1370
Krzysztof Rudion

High-Speed Distance Protection Using Wavelet-Based Filtering Algorithm ..................................................................................... 1377
Kleber M. Silva, Benemar A. Souza, Washington L.A. Neves

Reliability of Aged Distribution Networks: Can the Automation Be the Solution in the Long Term? .................................................. 1384
E. Ghiani, F. Pilo, S. Mocci

Improved Calculation of Geomagnetically Induced Currents in Power Networks in Low-Latitude Regions ........................................................................................................................................ 1391
E.H. Bernhardi, T.A. Tjimbandi, P.J. Cilliers, C.T. Gaunt

Main Advantages and Limitations of the Interline Power Flow Controller: A Steady-State Analysis .................................................. 1396
R.L. Vasquez-Arnez, F.A. Moreira

A Mixed-Integer Programming Model for Long Term Generation Expansion Planning of the Brazilian System ........................................................................................................................................ 1402

The Influence of Operational Marginal Cost Simulation Methods on Electricity Contract Portfolio Strategies in Brazil ........................................................................................................................................ 1409

Ten Years of Application of Stochastic Dual Dynamic Programming in Official and Agent Studies in Brazil – Description of the NEWAVE Program ........................................................................................................ 1416
M.E. Maceira, F.S. Duarte, D.D. Penna, L.A. Moraes, A.C. Melo

Reliability-Oriented Distribution System Expansion and DG Deployment Using a Dynamic Programming Based Method ........................................................................................................................................ 1423
Joydeep Mitra, Mallikarjuna R. Vallem
