
(MASCOTS 2010)

Miami Beach, Florida, USA
17 – 19 August 2010
Message from the General Chair.....................................................................................................................x
Message from the Program Chairs....................................................................................................................xi
Conference Committees.......................................................................................................................................xii
Reviewers............................................................................................................................................................xiv
Keynote 1..............................................................................................................................................................xv
Keynote 2..............................................................................................................................................................xvi

Session 1 - Best Paper Award Candidates I

EntomoModel: Understanding and Avoiding Performance Anomaly Manifestations ..................................................3
Christopher Stewart, Kai Shen, Arun Iyengar, and Jian Yin
Exploiting Concurrency to Improve Latency and throughput in a Hybrid Storage System .................................................14
Xiaojian Wu and A.L. Narasimha Reddy
PAC: Pattern-driven Application Consolidation for Efficient Cloud Computing ..........................................................24
Zhenhuan Gong and Xiaohui Gu

Session 2 - Best Paper Award Candidates II

Predicting the Performance of Virtual Machine Migration ..........................................................................................37
Sherif Akoush, Ripduman Sohan, Andrew Rice, Andrew W. Moore, and Andy Hopper
Distributed Routing for Vehicular Ad Hoc Networks: Throughput-Delay Tradeoff ..................................................47
Ali Abedi, Majid Ghaderi, and Carey Williamson
DiffECC: Improving SSD Read Performance Using Differentiated Error Correction
Coding Schemes .................................................................57
Guanying Wu, Xubin He, Ningde Xie, and Tong Zhang

**Session 3 - Storage I**

PUD-LRU: An Erase-Efficient Write Buffer Management Algorithm for Flash
Memory SSD .................................................................69
Jian Hu, Hong Jiang, Lei Tian, and Lei Xu
Effect of Replica Placement on the Reliability of Large-Scale Data Storage Systems ........................................79
Vinodh Venkatesan, Ilias Iliadis, Xiao-Yu Hu, Robert Haas, and Christina Fragouli
Sequential Prefetch Cache Sizing for Maximal Hit Rate .................................................................89
Swapnil Bhatia, Elizabeth Varki, and Arif Merchant

**Session 4 - Networks I**

RRDtrace: Long-term Raw Network Traffic Recording using Fixed-size Storage ................................101
Antonis Papadogiannakis, Michalis Polychronakis, and Evangelos P. Markatos
Profit Allocation in Coalition VoD Service .................................................................111
Noriaki Kamiyama, Ryoichi Kawahara, and Haruhisa Hasegawa
Fair Allocation of Substrate Resources among Multiple Overlay Networks ................................121
Mehmet Demirci and Mostafa Ammar

**Session 5 - Distributed Systems I**

On Predictability of System Anomalies in Real World .................................................................133
Yongmin Tan and Xiaohui Gu
On the Relevance of Social Information to Opportunistic Forwarding ........................................141
Abderrahmen Mtibaa, Martin May, and Mostafa Ammar
Autonomic Provisioning with Self-Adaptive Neural Fuzzy Control for End-to-end Delay Guarantee .................................................................151
Palden Lama and Xiaobo Zhou

**Session 6 - Wireless Networks**

Cluster-Based Correlated Data Gathering in Wireless Sensor Networks ........................................163
Ali Dabirmoghaddam, Majid Ghaderi, and Carey Williamson
Expanding the Event Horizon in Parallelized Network Simulations ........................................172
Georg Kunz, Olaf Landsiedel, Stefan Götz, Klaus Wehrle, James Gross, and Farshad Naghibi
Analytical Modelling and Message Delay Performance Evaluation of the IEEE 802.16 MAC Protocol .................................................................182
Luís F.M. de Moraes and Danielle Lopes F.G. Vieira

**Session 7 - Parallel and Multicore Systems I**

Efficient Discovery of Loop Nests in Execution Traces .................................................................193
Qiang Xu, Jaspal Subhlok, and Nathaniel Hammen
Timing Accurate Functional-Level Hardware Simulation with Pull Model Data Flow ................................203
George F. Riley and Elizabeth Lynch
A Simulation Framework for the Analysis of the TLB Behavior in Virtualized Environments .................................................................211

Girish Venkatasubramanian, Renato J. Figueiredo, Ramesh Illikkal, and Donald Newell

Session 8 - Networks II

A Case for Robust Semi-Experiments .................................................................225

Himanshu Gupta, Vinay J. Ribeiro, and Anirban Mahanti

Performance of Quantized Congestion Notification in TCP Incast Scenarios of Data Centers .................................................................235

Prajwal Devkota and A.L. Narasimha Reddy

Measurement-Based Analysis of Head-of-Line Blocking for SIP over TCP .................................................................244

Marco Happenhofer and Peter Reichl

Session 9 - Cloud Computing

Decision Model for Cloud Computing under SLA Constraints .................................................................257

Artur Andrzejak, Derrick Kondo, and Sangho Yi

Clasas: A Key-Store for the Cloud .................................................................267

S.J. Thomas Schwarz and Darrell D.E. Long

Profit-Aware Server Allocation for Green Internet Services .................................................................277

Michele Mazzucco, Dmytro Dyachuk, and Marios Dikaiakos

Session 10 - Storage II

Frequency Based Chunking for Data De-Duplication .................................................................287

Guanlin Lu, Yu Jin, and David H.C. Du

Examining Energy Use in Heterogeneous Archival Storage Systems .................................................................297

Ian F. Adams, Ethan L. Miller, and Mark W. Storer

Modeling the Run-time Behavior of Transactional Memory .................................................................307

Zhengyu He and Bo Hong

Session 11 - Distributed Systems II

Autonomic Log/Restore for Advanced Optimistic Simulation Systems .................................................................319

Roberto Vitali, Alessandro Pellegrini, and Francesco Quaglia

OnTimeDetect: Dynamic Network Anomaly Notification in perfSONAR Deployments .................................................................328

Prasad Calyam, Jialu Pu, Weiping Mandrava, and Ashok Krishnamurthy

Content Delivery Using Replicated Digital Fountains .................................................................338

Niklas Carlsson and Derek L. Eager

Session 12 - Parallel and Multicore Systems II

Barra: A Parallel Functional Simulator for GPGPU .................................................................351

Sylvain Collange, Marc Daumas, David Defour, and David Parello

Automatic Derivation of Performance Prediction Models for Load-balancing Properties Based on Goal-oriented Measurements .................................................................361

Michael Hauck, Jens Happe, and Ralf H. Reussner

CantorSim: Simplifying Acceleration of Micro-architecture Simulations .................................................................370

Zhibin Yu, Hai Jin, Jian Chen, and Lizy K. John
Posters

An Adaptive and Energy-efficient Routing Protocol Based on Machine Learning for Underwater Delay Tolerant Networks .................................................. 381

Tiansi Hu and Yunsi Fei

An Analytical Model with Improved Accuracy of IEEE 802.11 Protocol Under Unsaturated Conditions ................................................................. 385

Kumaran Vijayasankar, Azar Taufique, Lakshmi Narasimhan Kannan, Marco Tacca, and Andrea Fumagalli

aSHIIP: Autonomous Generator of Random Internet-like Topologies with Inter-domain Hierarchy ................................................................. 388

Joanna Tomasik and Marc-Antoine Weisser

Black-Box Performance Modeling for Solid-State Drives ........................................ 391

Shan Li and H. Howie Huang

Composite Pseudo-Associative Cache for Mobile Processors .................................. 394

Lakshmi Deepika Bobbala, Javier Salvatierra, and Byeong Kil Lee

Content Retrieval Delay Driven by Caching Policy and Source Selection .................... 397

Mathias Björkqvist and Lydia Y. Chen

Design of New Aggregation Techniques for Wireless Sensor Networks ......................... 400

David Fotue, Foued Melakessou, Thomas Engel, and Houda Labiod

Dynamic Load Balancing Multipathing in Data Center Ethernet .................................. 403

Yang Yu, Khin Mi Mi Aung, Edmund Kheng Kiat Tong, and Chuan Heng Foh

Efficient Storage Management for Object-based Flash Memory .................................. 407

Yangwook Kang, Jingpei Yang, and Ethan L. Miller

Efficient Web Requests Scheduling Considering Resources Sharing ............................. 410

Simon Duquennoy and Gilles Grimaud

Element Based Semantics in Multi Formalism Performance Models ............................ 413

Mauro Iacono and Marco Gribaudo

Fountains vs Torrents: The P2P ToroVerde Protocol ................................................. 417

A. Magnetto, S. Spoto, R. Gaeta, M. Grangetto, and M. Sereno

Impact of Deployment Point Arrangement on Intrusion Detection in Wireless Sensor Networks ......................................................................................... 421

Yun Wang and Zhengdong Lun

Integrated Monitoring and Control for Performance Management of Distributed Enterprise Systems ................................................................. 424

Rajat Mehrotra, Abhishek Dubey, Sherif Abdelwahed, and Asser Tantawi

A Model-Driven Tool for Telecom Service Development Process ................................. 427

Ankit Ahuja, Jacques Simonin, and Rémi Nedelec

Modeling and Evaluation of Control Flow Vulnerability in the Embedded System ............. 430

Mohammad Abdur Rouf and Soontae Kim

Multi-level Crypto Disk: Secondary Storage with Flexible Performance Versus Security Trade-offs ................................................................................. 434

Shiva Chaitanya, Bhuvan Urgaonkar, and Anand Sivasubramaniam
New Algorithms for File System Cooperative Caching ................................................................. 437
   Eric Anderson, Christopher Hoover, and Xiaozhou Li
Impediments to Analytical Modeling of Multi-Tiered Web Applications ........................................ 441
   Nilabja Roy, Aniruddha Gokhale, and Larry Dowdy
On the Universal Generation of Mobility Models ........................................................................... 444
   Alberto Medina, Gonca Gursun, Prithwish Basu, and Ibrahim Matta
Performance Analysis of Selected Error Control Protocols in Wireless Multimedia
Sensor Networks ......................................................................................................................... 447
   M. Yousof Naderi, Hamid R. Rabiee, and Mohammad Khansari
Effective Quality of Service Differentiation for Real-world Storage Systems ..................................... 451
   Rui Zhang, David Chambliss, Prashant Pandey, William Shearman, Juan Ruiz, Yan Xu,
   and Joseph Hyde
Reinventing Lock Modeling for Multi-Core Systems ........................................................................ 455
   Yan Cui, Weiyi Wu, Yingxin Wang, Xufeng Guo, Yu Chen, and Yuanchun Shi
A Symbolic Reachability Graph and Associated Markov Process for a Class of Dynamic Petri Nets ................................................................................................................................. 458
   Lorenzo Capra
Towards Collaborative Research and Education in Computer Architecture with
the Archer System ......................................................................................................................... 462
   Girish Venkatasubramanian, David Isaac Wolinsky, and Renato J. Figueiredo
Trust Mechanisms for Efficiency Improvement in Collaborative Working
Environments ............................................................................................................................... 465
   Xingyu Zheng, Patrick Maillé, Cam Tu Phan Le, and Stéphane Morucci Swid
Author Index ................................................................................................................................. 468
