# TABLE OF CONTENTS

Volume 1

## ACCESS TO AIRSPACE

The Challenge of Airspace Access for Unmanned Aircraft .......................................................... 1  
*Robert Dishman*

Remotely Piloted Aircraft Operations in the National Airspace System ................................. 23  
*Gerald R. Sayer*

Airspace Integration Capabilities Based Assessment ................................................................. 53  
*Steven C. Tanner*

## AIR GROUND COLLABORATION

Decentralized Collaboration Between Heterogeneous Agents in Combined Air and Ground Missions ............ 79  
*Charles Pippin, Ai-Ping Hu, Michael Matthews*

An Engineering Capstone Project to Develop an Unmanned Air/Ground Team for Search and Rescue .......... 104  
*Richard S. Stansbury, Massood Towhidnejad, Michael Dop, Savannah Kirby, Noah Potash*

## AIRSPACE INTEGRATION I

Delivering NextGen UAS / NAS Interoperability Challenges .................................................. 125  
*Ron Stroup*

## AIRSPACE INTEGRATION II

Metrics for Equitable UAS Operations in Mixed-Use Airspace .................................................. 143  
*Ella Atkins*

UAS Operations in the National Airspace System: Human-in-the-Loop Simulation and Experimentation ........................................ 158  
*John Helleberg, David Maroney*

International Regulation of Unmanned Aircraft Operations in Offshore and International Airspace ........ 177  
*Douglas M. Marshall*

## ARMY UAS ROADMAP

Army's Unmanned Aircraft Systems Center of Excellence ...................................................... 188  
*John M. Lynch*

## AUTONOMY

Validation of Learned Behaviors in Unmanned Ground Vehicles ............................................. 208  
*Francis X. Govers III*

The OpenJAUS Approach to Designing and Implementing the New SAE JAUS Standards .................... 222  
*Thomas Galluzzo, Danny Kent*

Cooperative Autonomous Soaring: Simulation Methods and Results .......................................... 234  
*Zachary Hazen*

## COMMERCIAL ROBOTICS

The Future of Commercial Robotics: Where Industrial and Mobile Robotics Meet .......................... 269  
*N/A*
### EDUCATIONAL PROGRAMS

**Bridging the Gap: Implementation of an Unmanned Aircraft Systems Operations Degree Program at the University of North Dakota**  
Ben Trapnell  ................................................................. 278

**Manufacturing and Robotic Technicians, Electronic Technology and Electro-Mechanical Systems Specialist Surveys, SME Panels and Curriculum Development Results and the Education Implications for AUVSI**  
Charles T. Muse  ............................................................................................................................... 316

### GENERAL SESSION

**USAFA UAS-RPA Education and Research**  
Dana Born  ................................................................................................................................. 329

**Combat Air Force UAS Way Ahead: 2020 and Beyond**  
H. D. “Jake” Polumbo  ............................................................................................................................... 350

### GROUND VEHICLE CONTROL

**Speech Control of Unmanned Ground Vehicles**  
Jonathan Brown, Chris Blanco, Brian Hoffman, Amit Juneja, Dongqing Liu, Lester Ngr, Tarun Pruthi  ............................................................................................................................... 363

**Convoys of Unmanned Vehicles As a Step Towards Driverless Road Transportation**  
Marcus Janik  ................................................................................................................................. 381

**Agile Robot Teams For Mobile Networks In Urban Environments**  
David Mayhew, Timothy Judkins, Peter Abeles, Vikram Manikonda  ................................................................................................................................................................................................. 405

### GROUND VEHICLE RESEARCH

**A Capstone Experiment to Assess Unmanned Ground Vehicle Tactical Behaviors Developed Under the Robotics Collaborative Technology Alliance**  
Barry Bodt, Marshal Childers, Rick Camden  ................................................................................................................................. 426

**Small Diameter Counter Tunnel Surveillance Robotics Project**  
N/A  ................................................................................................................................. 459

**Heterogeneous Drive Systems for Macro/Micro Exploration of De-Constructed Environments**  
Richard Voyles, Sam Povilus, Roy Godzdanker, Wendell Chun  ................................................................................................................................................................................................. 495

### HOT TOPICS

**Unmanned Vehicles Market Directions, Shares, and Forecasts**  
N/A  ................................................................................................................................................................................................. 537

**Getting There from Here - Ground Robotics Markets**  
Kent Massey  ................................................................................................................................................................................................. 561

**VORTEX2 Unmanned Aircraft System**  
Brian Argrow, Adam Houston, Eric Frew  ................................................................................................................................................................................................. 574

**CASA & UAS Developments in Australia**  
N/A  ................................................................................................................................................................................................. 641

**UM::Autonomy**  
N/A  ................................................................................................................................................................................................. 655

**Cooperative Convoy Protection**  
Rob Sova, Erik Peterson, Ron Lewis, Jennifer Jensen, Keith Arthur  ................................................................................................................................................................................................. 674

**MBARI in the Gulf Oil Spill Response**  
N/A  ................................................................................................................................................................................................. 680

**Insitu Pacific Overview**  
N/A  ................................................................................................................................................................................................. 704

**Unmanned Aircraft System (UAS) Sense and Avoid (SAA) Technology Development Roadmap**  
N/A  ................................................................................................................................................................................................. 709

**Overview of Australian Unmanned Systems Activities**  
Peter Smith  ................................................................................................................................................................................................. 728
USAF Airborne Sense and Avoid.............................................................................................................. 755
  N/A
UAS Market Trends .................................................................................................................................. 770
  N/A
Intelligence and Insight You Can Trust..................................................................................................... 785
  Derrick J. Maple

Volume 2

UAS Sense and Avoid S&T Roadmap........................................................................................................ 810
  John Preston
Airspace Integration with Ground Based Sense and Avoid (GBSAA)..................................................... 827
  Viva Austin

LATEST ON UNMANNED AIRSHIPS

Unmanned Airships................................................................................................................................. 834
  Ron Browning
Weeks to Years On-Station? Unmanned Airship Technology & Markets............................................. 843
  Ed Herlik
Listener's Choice..................................................................................................................................... 871
  Ed Herlik
The Latest on Unmanned Airships.......................................................................................................... 895
  Loginn Kapitan
Providing a Revolutionary ISR Capability - “21-Day Persistent Surveillance” - A Long Endurance
Multi-INT Vehicle (LEMV) .................................................................................................................... 908
  Michael Addison

MARITIME APPLICATIONS

Energy-Aware Flight Management and Control of the Flying Fish Solar-Power Seaplane................... 910
  Ryan Eubank, Ella Atkins
A Small UAS for Detection and Tracking of Semi-Submersibles.......................................................... 951
  Robert Milller, Evan Zaugg, Allen Gardner, Jim Wilson, Matthew Edwards

MARITIME INTEGRATION

Challenges of Unmanned System Integration ......................................................................................... 962
  Dave Hager, A. J. Benn
Leveraging BAMS UAS to Meet U.S. Navy Maritime ISR Demands.................................................... 975
  Mike Hewitt

NOVEL UAS APPLICATIONS

Conceptual Design of a Vertical Takeoff and Landing Unmanned Aerial Vehicle with 24-HR
Endurance ............................................................................................................................................... 995
  William J. Fredericks
Innovative Solutions for Counter-MAV Defense .................................................................................... 1012
  Chris Edlund, Brad Wheeler, Erin Scott, Karl Bohn, Corey Curtis, Daniel Jensen, Brad Camburn, Kris Wood
Development of Extremely Long Term ISR Capabilities for a Small UAS ........................................ 1022
  J. Hardin, A. Kimber, E. May, S. A. Pollock, B. Saunders, G. Fleming, A. Szmerkovsky

NOVEL UAS MISSIONS

Unmanned Systems For Medical Resupply and Personnel Evacuation Research and Development........ 1041
  Michael K. Beebe
Robotics and Unmanned Systems – ‘Game Changers’ for Medical Missions .......................................................... 1061
  Michael K. Beebe, Gary R. Gilbert

Use of Unmanned Air Vehicles in Oil, Gas and Mineral Exploration Activities ................................................. 1067
  Joseph Barnard

Rapid Airfield Damage Assessment System (RADAS) ............................................................................................. 1115
  Brian Skibba

Unmanned Aircraft Systems (Issues & Challenges) ................................................................................................. 1143
  Jim Coyne

OPERATING...IN ARCTIC

Doodlebugger ......................................................................................................................................................... 1162
  N/A

UAS Operations in the Cryosphere ......................................................................................................................... 1165
  W. R. Donovan

International Submarine Engineering Ltd. ................................................................................................................ 1169
  N/A

Unmanned Systems & The U.S. Navy’s Arctic Roadmap ........................................................................................ 1180
  Dave Titley

PANELS

Cyber and Unmanned Systems Operations ........................................................................................................ 1186
  John McEachen

Autonomous Systems Curriculum - A Proposal for an Interdisciplinary Education Program .............................. 1204
  Mike Ross, Isaac Kaminer, Dave Netzer, Xiaoping Yan, Tony Healey, Wei Kang

Information Operations Range Overview .......................................................................................................... 1247
  John D. Ballard

ARFORCYBER ....................................................................................................................................................... 1262
  Mark R. Quantock

Human- vs Self-Supervised Robots: “Autonomy” for Discussing Ethics ................................................................. 1266
  Patrick Hew

Autonomy and Lethality in Armed Combat Robots ............................................................................................. 1273
  Ronald C. Arkin

Attracting Investors to Unmanned Systems ......................................................................................................... 1312
  Joe Landon, Oliver Althoff, Tess Oxenstierna, Steve Nordlund, Les Makepeace

Insitu Joins the Boeing Family - Our Story and Lessons Learned ......................................................................... 1315
  Steve Nordlund

Attracting Investors to Unmanned Systems – Debt Capital Primer ........................................................................ 1332
  Oliver Althoff

Panel on “Attracting Investors to Unmanned Systems” ......................................................................................... 1342
  Tess Oxenstierna

Do We Need to Rewrite Military Ethics? Ethics and Robotic Systems in Military Operations ................................. 1355
  Werner Freistetter

Space Angels Network .............................................................................................................................................. 1362
  Joe Landon

POSTERS

Behaviors, Sensors, and Cooperative Autonomy for an Autonomous Maritime Platform ................................... 1370
  Les Elkins

Unmanned Aerial Vehicle Laser Targeting System ............................................................................................. 1390
  Gregory R. Kriehn, Jonathan Flerchinger, Alfred Lopez, Victor Urbiea, Eryn Combs, Tom Pittenger, Tim Courrejou, Jason Cook, Charles Yam

An Eastern North Dakota Airspace Characterization Through a Collaborative Mission Between the University of North Dakota and the North Dakota Army National Guard 188th Air Defense Artillery Battalion .................................................................................................................................. 1410
  Chris J. Theisen, Mark A. Askelson, Edward Townsend

Addressing Small Unmanned Air Systems (SUAS) Integration Issues ............................................................ 1425
  R. Wayne Devereaux, Huat Ng
Spectral LADAR for Autonomous Navigation

Michael A. Powers, Christopher C. Davis

Design and Development Considerations for Collegiate Degree Programs Specializing in Unmanned Systems Training

Harry Minniear, Richard Baker

A Dedicated UAS Training Solution

Paul Nelepovitz, Ross Miller

Expanding Distribution of Secure ISR Video Through Networked Control of UAVs

Tara K. Maurer

Autonomous Velocity Controlled Tracking for UAS Operations

Richie Spitsberg, Michael Mettler, William H. Semke, Richard R. Schultz

Model-Based Design for Large High-Integrity Systems: A Discussion on Verification and Validation

Mike Anthony, Matt Behr, Matt Jardin, Richard Ruff

Synthetic Instruments Provide Significant Benefits to Total Life Cycle UAV Platform Testing

Marvin J. Rozner Jr., David A. Poole

PUBLIC SAFETY APPLICATIONS

Potential Uses and Criteria for Unmanned Aerial Systems for Wildland Firefighting

Matthieu Branlat, Robin Murphy

The Applications of Small Unmanned Aerial Systems in Law Enforcement

Ben Miller

Air Force Research Laboratory - Airbase Technologies Division

Dave Trevvett

ROBOTS GO TO COLLEGE

The Research and Engineering Center for Unmanned Vehicles

Brian Argrow

Robots Go to College

John E. Jackson

Marine Robotics Education Evolution at URI

Robert Tyce

Volume 3

SENSE AND AVOID

Determining the Minimum Required Field of Regard for Sense and Avoid Surveillance Using Airspace Encounter Models

Matthew Edwards

FAA UAS Sense and Avoid Workshops

Stephen George

Ground-Based Sense and Avoid (GBSAA) Simulation for Near-Term UAS Airspace Integration

David Maroney

STANDARDS

JAUS Tool Set - An Open Source SAE-JAUS Software Development Kit

Alex Evans, Arfath Pasha, Danny Kent, Dave Martin, Drew Lucas, Eric Thorn, Jaehoon Lee, Jean Francois Kamath, Mark Bofill, Nicholas Johnson, Parag Batavia, Rich Ernst, Tom Galluzzo

Towards Sensor Driver Standardization—Lessons Learned from Test & Measurement

Brian H. Powell, Shelley Gretlein

Understanding JAUS and OpenJAUS

Tom Galluzzo, Danny Kent
