2010 IEEE 12th International Symposium on High-Assurance Systems Engineering

(HASE 2010)

San Jose, California, USA
3-4 November 2010
Fault Tolerance

Low-Cost Secret-Sharing in Sensor Networks ................................................................. 1
  Marin Bertier, Achour Mostefaoui, and Gilles Trédan

EBAWA: Efficient Byzantine Agreement for Wide-Area Networks ........................... 10
  Giuliana Santos Veronese, Miguel Correia, Alysson Neves Bessani, and Lau Cheuk Lung

Scalable Fault Detection for FPGAs ............................................................................... 20
  Frantz Iwu

Reliability/Availability Modeling

Predicting Faults in High Assurance Software ................................................................. 26
  Naeem Seliya, Taghi M. Khoshgoftaar, and Jason Van Hulse

A UML-Based Domain Specific Modeling Language for the Availability Management Framework.................................................................................................................. 35
  Pejman Salehi, Abdelwahab Hamoud-Lhadi, Pietro Colombo, Ferhat Khendek,
  and Maria Toeroe

Symbolic Representation Techniques in Dynamic Reliability Evaluation ..................... 45
  Salvatore Distefano, Francesco Longo, and Marco Scarpa
Testing

A Stateful Approach to Testing Monitors in Multithreaded Programs
Richard H. Carver and Jeff Lei

A Dataflow Testing Approach for Aspect-Oriented Programs
Fadi Wedyan and Sudipto Ghosh

Paths to Property Violation: A Structural Approach for Analyzing Counter-Examples
Thomas Bochot, Pierre Virelizier, Helene Waeselynck, and Virginie Wiels

Case Studies

Hybrid Petri Nets with General One-Shot Transitions for Dependability Evaluation of Fluid Critical Infrastructures
Marco Gribaudo and Anne Remke

Formal Analysis of the Kaminsky DNS Cache-Poisoning Attack Using Probabilistic Model Checking
Nikolaos Alexiou, Stylianos Basagiannis, Panagiotis Katsaros, Tushar Dashpande, and Scott A. Smolka

Experience with Model-Based User-Centered Risk Assessment for Service Robots
Jérémie Guiochet, Damien Martin-Guillerez, and David Powell

Formal Methods

Proved Metamodels as Backbone for Software Adaptation
Franck Barbier and Cyril Ballagny

Reverse Engineering Abstract Components for Model-Based Development and Verification of Embedded Software
Yunja Choi and Hoon Jang

A Framework for Qualitative and Quantitative Formal Model-Based Safety Analysis
Matthias Güdemann and Frank Ortmeier

Information and System Assurance

Domain-Specific Feature Modeling for High Integrity Vehicle Control System Functional Design
Shige Wang

Evaluation and Comparisons of Dependable Distributed Storage Designs for Clouds
Liangliang Xiao, Yunqi Ye, I-Ling Yen, and Farokh Bastani
Fast Abstracts

Enhancing Performance of Random Testing through Markov Chain Monte Carlo Methods................................................................. 162
  Bo Zhou, Hiroyuki Okamura, and Tadashi Dohi

Architecture-Based Reliability Modeling of Web Services Using Petri Nets ................................................................. 164
  Cobra Rahmani, Azad Azadmanesh, and Harvey Siy

Automatic Fault Behavior Detection and Modeling by a State-Based Specification Method................................................................. 166
  Luca Pazzi, Matteo Interlandi, and Marco Pradelli

Automated Testing of LTL Formula Generation by Prospec........................................................................................................ 168
  Cuauhtemoc Munoz and Steve Roach

A Dependability Case Editor with Pattern Library.................................................................................................................. 170
  Yutaka Matsuno, Hiroki Takamura, and Yutaka Ishikawa

Author Index........................................................................................................................................................................... 172
