2010 Emobility – Electrical Power Train

Leipzig, Germany
8 – 9 November 2010
TABLE OF CONTENTS

Properties and Advantages of the Quasi-Z-Source Inverter for DC-AC Conversion for Electric Vehicle Applications ................................................................. 1
Katharina Beer, Bernhard Piepenbreier

Stability Analysis of Input-Series Output-Parallel Connected Buck Rectifiers .......................................................... 7
Poonam Chaudhary, Ashish Agarwal, Parthasarathi Sensarma

A Highly Integrated, Mass Produced Battery Module as Basis for Various EV and HEV Systems ................................. 12
B. Eberle, F. Von Borck, S. Raiser

Study and Comparison of Several Permanent-Magnet Excited Rotor Types Regarding their Applicability in Electric Vehicles ............................................................. 18
Thomas Finken, Marco Hombitzer, Kay Hameyer

Cost-Effective Electric Traction Drive with High Efficiency at Low-Load Operation ........................................... 25
Dieter Gerling

Requirements on Electrical Power Infrastructure by Electric Vehicles .......................................................... 31
Matthias Hable, Christine Schweiger, Liang Tao, Andreas Ettinger, Robert Koehler, Ernst-Peter Meyer

Contribution to the Development of Positioning Tolerant Inductive Charging Systems ........................................... 37
Jorg Heinrich, Nejla Farspour

Measurement of Transient Pulses on High-Voltage Automotive Power Networks ............................................................. 42
Jens Holloch, S. Tenbohlen, W. Kohler, Martin Aidam, Thomas Kraub

IPMSM Control Regime for a Hybrid-Electric Vehicle Application .............................................................. 47
Markus S. Kunter, Timo Schoenen, Werner Hoffmann

Modular Converter Systems for Vehicle Applications ................................................................................. 52
Lukas Lambertz, Rainer Marquardt, Anna Mayer

Control Challenges of an Externally Excited Synchronous Machine in an Automotive Traction Drive Application .......................................................................... 58
Moritz Margner, Wilhelm Hackmann

Characterization of Automotive High Voltage Networks for EMI Measurements .................................................. 64
Stefan Tenbohlen, Wolfgang Kohler

Simplify your HV-harness – Uniform High Current Connectors for Batteries, Inverters and Motors in Heavy-duty Vehicles and Passenger Cars ............................................................. 69
Thomas Schilla, Martin Schuster

Hybrid Supply Using Supercapacitors For Start & Stop Vehicles ................................................................... 75
N. Rizoug, G. Feld, B. Barbedette

Secure Metering for Electrical Vehicles ................................................................................................. 81
Matthias Schneider, Sergiu Tcacuci, Christoph Roland

Robust PI Controller for Multi-purpose Voltage Controlled VSI ............................................................. 87
Shahil Shah, Partha Sarathi Sensarma

Conceptional Considerations for Electrification of Public City Buses – Energy Storage System and Charging Stations .................................................................................. 94
Philipp Sinhuber, Werner Rohlfis, Dirk Uwe Sauer

Stator-flux-oriented Control with High Torque Dynamics in the Whole Speed Range for Electric Vehicles ............................................................................................. 99
M. Spichartz, A. Steimel, V. Staadt

Intelligent Steering System for Electrical Power Trains .................................................................................. 105
Ralf Stetter, Andreas Paczynski

A Comparison of Z-Source Three-Level NPC Inverter Versus Z-Source Two-Level Inverter ........................................... 111
Stephan Tenner, Wilfried Hoffmann

Power Electronic Architectures for Electric Vehicles .............................................................................. 118
Hauke Van Hoek, Matthias Boesing, Daniel Van Treek, Timo Schoenen, Rik W. De Doncker

Lifetime as a Control Variable in Power Electronic Systems ........................................................................... 124
Marco Weckert, Jorg Rohr-Stielow

Benefit of a Simulation Model of a Decentralized Energy Management System for Electric Vehicle Charging ........................................................................................................ 130
Manuel Wickert, Andre Baier, Patrick Lichtner, Johannes Prior

Energy Management for a Fuel Cell/Battery Hybrid System ........................................................................ 137
Jorg Wilhelm, Holgar Janben, Jurgen Mergel, Detlef Stollen
