Computational Molecular Science and Engineering Forum

Presentations at the 2010 AIChE Annual Meeting

Salt Lake City, Utah, USA
7-12 November 2010

ISBN: 978-1-61782-165-3
Some format issues inherent in the e-media version may also appear in this print version.
TABLE OF CONTENTS

Surface Enrichment and Step Structure On Yttria-Stabilized Zirconia: A Combined Monte Carlo and DFT Study ................................................................. 1
Adam D. Mayernick, Michael Janik, Adri C.T. van Duijn, Matthias Batzill

First-Principles Theoretical Analysis of Doping in ZnO Nanocrystals ................................................................. 2
Tejinder Singh, T. J. Mountziaris, Dimitrios Maroudas

Computational Study of Proton Behavior in Yttrium-Doped Barium Cerate ................................................................. 3
Tania A. Tauer

Density Functional Theory Study of Carbon Dioxide Reduction On Ceria (110) ................................................................. 4
Brent J. Sherman, Cynthia S. Lo

Noble Gas Adsorption On Carbon Nanotubes and Metal Surfaces (Pd, Pt, Cu): A Van Der Waals Density Functional Study ................................................................. 5
De-Li Chen, Wissam A. Al-Saidi, J. Karl Johnson

Ammonia Dissociation Over Graphite Oxide, Carbon Nanotube and Fullerene ................................................................. 7
Liangliang Huang, Keith Gubbins, Teresa Bandosz

Numerical and Analytical Coarse-Graining Strategies Based On Relative Entropy Minimization ................................................................. 8
M. Scott Shell, Todd Smith

A Systematic Coarse-Graining Method to Predict the Structure and Properties of Polymer-Nanoparticle Mixtures. ................................................................. 9
Yousuf Chaudhary, Landry Khonoulavong, Venkat Ganesan, Victor Pryamitsyn

Systematic Multiscale Modeling of Polymer/Fullerene Bulk Heterojunctions for Photovoltaic Applications ................................................................. 10
David M. Huang, Adam J. Mould, Roland Faller

A Coarse-Grained Model for Explicit Solvation of DNA by Water and Ions ................................................................. 11
Robert C. DeMille, Thomas E. Cheatham, III, Valeria Molinero

Twist Propagation in Two-Nucleosome Arrays: Monte Carlo Simulations and Theory ................................................................. 12
Martin Kenward, Irina V. Dobrovolskaia, Gaurav Arya

Raft Registration Across Bilayers by Coarse-Grained Molecular Dynamics ................................................................. 13
Diego A. Pantano, Michael L. Klein, Preston B. Moore, Dennis E. Discher

Multiscale Molecular Modeling to Investigate the Aggregation of Polyamidoamine Dendrimers in Solution ................................................................. 14
Seung Ha Kim, Monica H. Lamm

Augmented Property Prediction of Ionic Liquids by Means of a Gradient-Based Optimization Workflow ................................................................. 15
Thorsten Köddermann, Marco Hülsmann, Dirk Reith

Simulations and Experimental Studies of CO2 and H2 Separation Using Ionic Liquids ................................................................. 16
Wei Shi, Dan C. Sorescu, Shan Wickramanayake, Murphy Keller, Christina Myers, David Luebke

Prediction of Transport Properties of Hydrogen Bonding Liquids by Molecular Simulation ................................................................. 17
Gabriela F. Guevara Carrion, Hans Hasse, Jadran Vrabec

Comparison of Equilibrium and Non-Equilibrium Methods and Force Fields for Calculating the Thermal Conductivity of Industrial Fluids ................................................................. 18
Benno Lefebvre, Paul W. Saxe, David Rigby

Experiments and Simulations of the Behavior of Captured CO2 On Functionalized Mesoporous Silica ................................................................. 19
Santiago Builes, Pedro Lopez-Aranguren, Roberta Pacciani, Concepción Domingo, Lourdes F. Vega

Determine the Permeability of An Amorphous Mixture of Polydimethylsiloxane and Dealuminated Zeolite ZSM-5 to Various Ethanol-Water Solutions Using Molecular Simulations ................................................................. 21
Paul F. Harten, J. R. Fried, Leland Vane

Molecular Dynamics Simulations of Proton Transport ................................................................. 22
Abhishek Asthana, Dean R. Wheeler

Molecular Modeling of Nanoporous Carbons: Atomistic Models and Simulated Adsorption ................................................................. 23
Jeremy C. Palmer, John K. Brennan, Keith E. Gubbins

Characterization of Carbonaceous Materials by Simulations of CO2 Adsorption ................................................................. 24
Santiago Builes, Thomas Roussel, Camelia Ghimbeu, Julien Parmentier, Roger Gaddou, Cathie Vis-Gaterl, Lourdes F. Vega

Simulated Adsorption and Characterization of Novel Nanoporous Polymers ................................................................. 26
Gregory S. Larzen, Ping Lin, Coray M. Colina

Quasi-High Pressure Effects in Nanopores ................................................................. 28
Yun Long, Jeremy C. Palmer, Benoit Coasne, Malgorzata Sliwinska-Barkowski, Keith E. Gubbins
Expansion and Contraction of Mesoporous Adsorbents: Macroscopic Approach and Density
Functional Theory ................................................................. 29
Gennady Gor, Alexander V. Neimark

Oligomer Adsorption in Cylindrical Pores: a Comparison of Density Functional Theory and
Discontinuous Molecular Dynamics Simulation .................................................. 30
L. Anderson Strickland, Stepan Hlushak, Peter Cummings, Clare McCabe

Studies of Polymer Adsorption Using the Incremental Gauge Cell Monte Carlo Method ................. 31
Christopher J. Rasmussen, Alexey Vishnyakov, Alexander V. Neimark

Quantum Effect-Mediated Molecular Sieving of Hydrogen Isotopes ........................................ 32
Suresh K. Bhattachar, Thanh Nguyen, H. Jobic

Reduction of Stochastic On-Lattice Chemical Kinetics Models to Well-Mixed Descriptions Via
Singular Perturbation .................................................................................. 33
Michal Stamatakis, Dionisios G. Vlachos

A Coarse-Grained Approach to Agent-Based Computations: Coarse Bifurcation Analysis, Rare Event
Analysis, and a Patch Dynamics Scheme ....................................................... 34
Ping Liu, William Gear, Giovanni Samaey, Ioannis G. Kevrekidis

A Continuum-Atomic Hybrid Simulation of Droplet Spreading On a Flat Solid Surface .................. 37
Hongfei Wu, Kristen A. Fichthorn, Ali Borhan

Multiphysics Simulation of Interfacial Phenomena by Fluctuating Hydrodynamics ....................... 38
Barry Shang, Jihih-Wei Chu

Evaluation of Metamodeling Techniques for Discrete-Time Approximations ............................... 39
Andrea F. Hernandez Moreno, Martha A. Grover

A Novel Computational Architecture for Construction and Execution of Modular, Multiscale, Multi-
Algorithmic Dynamical Models ................................................................. 41
Leonard A. Harris, Justin S. Hogg, Mohammad Fallahi-Sichani, Jennifer J. Linderman, Denise E. Kirschner, James R. Faeder

Managing Multi-Scale Modeling Issues in Chemical Engineering — a Computer-Aided Framework ..................................................... 42
Martina Heitzig, Gürcan Sin, Peter Glarborg, Rajiqul Gani

Use of the Ornstein-Zernike Percus-Yevick Equation to Extract Interaction Potentials From Pair Correlation Functions .................................................. 44
Qifei Wang, David Keffer, Donald M. Nicholson, Brock Thomas

Field Biased Molecular Simulation Technique for Complex Fluids ................................................. 45
Amir Vahid, Richard Elliott

Spatial Updating Monte Carlo in the Great Grand Canonical Ensemble ........................................... 46
G. Orkoulas

Systematic Identification of Coarse Variables in Biomolecular Systems through Dimensionality-
Reduction Tools: Reconstruction and Navigation of Free-Energy Landscapes ................................. 48
Miguel A. Anait, Lilia Y. Brevarwolf, Andrew L. Ferguson, Gerhard Hummer, Ioannis G. Kevrekidis

Dimerization of Protagrin-1 Peptides in Different Environments ....................................................... 50
Victor Vivecharuk, Yiannis N. Kaznessis

A Multi-Scale Approach to Modeling Aqueous Electrolyte Mixtures at High Pressure ...................... 51
Angelo Lucia, Brian Bonk, David Freeman, Jae W. Lee, Richard Waterman

Multi-Scale Modeling of Polymer Electrolyte Membrane Fuel Cells .......................................... 52
Robert L. Smith, Pll Seung Chung, Jan Steckel, Lorenz T. Biegler, Myung S. Jhon

Industrial Multiscale Modeling: Methods and Applications ......................................................... 54
Simon C. McGrother, Shyamal Nath, Johannes G. E. M. Fraaije

Rational Prediction of Flash Points Based On COSMO-RS ......................................................... 56
Andreas Klamt

A Quantum Structure Property Relationship Based Approach for Computing Critical Properties,
Heat of Vaporization and Gas-Phase Transport Parameters of Pure Components ........................... 57
Istvan Lengyel

Estimation of the H-Abstraction Reaction by a Cl Radical From Theory and Experiment: A Critical Reaction Step in Thermal Chlorination of Hydrocarbon .................................................. 58
Debashis Chakraborty, Max Tirtowidjojo

Effect of Solvent On Polymer Chain Length and Chain-Transfer Reactions in Self-Initiated High-
Temperature Polymerization of Methyl Acrylate ............................................................................. 60
Sriraj Srinivasan, Nazanin Moghaddam, Massoud Sorosh, Michael C. Grady, Andrew M. Rappe

The Role of Multifunctional Kinetics During Early-Stage Silicon Hydride Pyrolysis: Reactivity of SiH2 Isomers with SiH4 and Si2H6 ................................................................. 61
Andrew J. Adamczyk, Linda Broadbelt

Building Models of Liquid Phase Kinetics and Separation: Hydrocarbon Autooxidation .................. 62
Richard H. West, Amrit Jalan, William H. Green
