# TABLE OF CONTENTS

## Volume 1

### KEYNOTE

**Meeting Air Quality Challenges with Sound Science and Measurements**  
*Barry R. Wallerstein*  
1

### SUPER SESSION A

**Air Toxics Data Treatment, Characterization and Interpretation**  
*D. Mikel*  
34

**Topic 1: Why Air Toxics Are Important (a Brief History of Ambient Air Toxic Monitoring and How Date Needs and How Data Needs and Uses Are Inter-related Across Different Air Toxics Programs)**  
*Regi Oommen*  
36

**The Importance of Data Quality and Method Quality Objectives to Data Use**  
*D. Dayton, ERG*  
N/A

**Data Quality and Method Quality Objectives for EPA National Monitoring Programs**  
*D. Mikel, U.S. EPA*  
N/A

**Topic 2: How Do I Use My Air Toxics Measurements Data to Assess Trends?**  
*Jaime Hauser*  
68

**National Trends in Ambient Air Toxics Concentrations**  
*Michael McCarthy, Jessica Charrier, Hilary Hafner*  
97

**Topic 3 - How Do I Use My Air Toxics Data to Evaluate Health Risk**  
*Regi Oommen*  
118

**Examples of Community Level Risk Weighted Air Toxics Concentrations**  
*Hilary Hafner, Michael McCarthy*  
157

**Topic 4: How Do I Use My Air Toxics Data to Validate Modeling Results?**  
*Regi Oommen*  
179

**Topic 5: How Do I Use My Air Toxics Measurements Data to “Validate my Emissions Inventory”**  
*R. Oommen, J. Hauser, and D. Dayton, ERG*  
N/A

### SUPER SESSION B

**Greenhouse Gases**  
*R. Bramston-Cook*  
200

**Quantifying Methane Fluxes Simply and Accurately: the Tracer Dilution Method**  
*Chris Rella*  
205

**Full Characterization of Long-Lived Greenhouse Gases in Ambient Air at an Industrial Park in Huntington Beach, California**  
*R. Bramston-Cook, Lotus Consulting*  
N/A

**Gas Analyzer Technologies for Measuring Carbon Dioxide, Water Vapor, and Methane in the Open Air**  
*D. McDermitt, LI-COR, Inc.*  
N/A

**Monitoring Options and Costs for CO2 Sequestration Projects**  
*S. Benson, Stanford University*  
N/A

**Mobile Mapping of Methane, Ammonia, and Hydrogen Sulfide for Source Identification**  
*Matt Sweeney*  
224

**TDL and OTM 10 Emission Measurements of Fugitive Emissions**  
*R. Hashmonay, ENVIRON*  
N/A

**Active and Passive FTIR Monitoring of Flare Combustion Efficiency**  
*N/A*  
241

**Measuring Greenhouse Gases Emissions from Animal Operations in Environmental Rooms**  
*Zifei Liu, Wendy Powers*  
305

**Analysis of Nitrous Oxide and Helium in Air: Greenhouse Gas Inventory**  
*Joseph T. Khoury, Alfred W. Sattler, Bryan S. Linsley, Keith D. Magers, Jean Lee*  
311
Development and Deployment of Mobile Laboratory for Continuous Long-term Unattended Measurements of Greenhouse Gases and Pollutants ................................................................. 318
  Douglas Baer

Optimum Parameters for Detection of Long-Lived Green House Gases in Ambient Air ................................................................. 369
  Randall Bramston-Cook, Edward Bramston-Cook

Mid-IR Based Platform for Measuring Greenhouse Gases ................................................................................................................................. 377
  H.J. Jost, James J. Scherer, Joshua B. Paul

SUPER SESSION C

Beta Gauge Monitoring Technology ................................................................................................................................. N/A
  Chair: D. Gobeli, MetOne

Practical Considerations for Obtaining and Validating BAM- 1020 Particulate Data ......................................................................................................................... 381
  Dennis Hart

Accuracy Requirements for Continuous Particle Measurement Methods in US and Europe and How They Are Being Met ................................................................................................................................. 386
  Herbert Schloesser

#59 Comparison Between Filter-based FRM And Continuous FEM PM2.5 Measurements In Southern California ................................................................. N/A
  B. Vlasich, S. Dutz, A. Polidori, P. Fine, S. Teffera, South Coast Air Quality Management District

Real World Performance of Beta Attenuation Monitors in an Extreme Environment: 2010 Symposium on Air Quality Measurement Methods and Technology ................................................................................................................................. 387
  Gary E Bertolin, Joel C. Torcolini, M. Scott Weaver

Development of an Aerosol Wind Tunnel for Evaluating Performance of PM10 Inlet ......................................................................................................................... 394
  Sangil Lee, Miae Ryu, Hyun Ho Kim, Jae Yong Lee, Sang Bong Han, Ki Jun Jeon, Jung, Sub Roh

CARBLOGGER: A Freely Available, Open Source, Digital Diagnostic Data system ................................................................................................................................. 398
  Matthew J. Vona, Matthew P. Quok

TCP/IP MODBUS Digital Data Collection ................................................................................................................................. 402
  Bryan C. Bibeau

SUPER SESSION D (1)

Stationary Source Dilution Methods for Fine Particulate Matter ................................................................................................................................. 409
  Glenn England

Continuous Multi-Metals Measurement – Part 1 ................................................................................................................................. 432
  K. Pettersson, Cooper Environmental Services

Continuous Multi-Metals Measurement – Part 2 ................................................................................................................................. N/A
  K. Pettersson, Cooper Environmental Services

Mobile Area Source Emissions Measurement ................................................................................................................................. N/A
  R. Green, Waste Management, Inc.

Passive Flare Measurements – Part 1 ................................................................................................................................. N/A
  R. Spellicy, IMACC

Passive Flare Measurements – Part 2 ................................................................................................................................. N/A
  R. Spellicy, IMACC

SUPER SESSION D (2)

Stationary Source – Advances in Manual Methods ................................................................................................................................. N/A
  Chair: R. Merrill, Eastern Research Group; Co-Chair: O. Chang, CARB

Introduction ................................................................................................................................. N/A
  R. Merrill, Eastern Research Group

Dilution Methods for Fine Particulate ................................................................................................................................. N/A
  G. England, ENVIRON

Dilution Sampling Applications ................................................................................................................................. 471
  O. Chang, CARB

Black Carbon Particulate Measurement ................................................................................................................................. N/A
  R. Shores, U.S. EPA
### SESSION 1

**Combustion Source Emissions**

Chair: G. England, ENVIRON

<table>

</tbody>
</table>
PM2.5 Challenge: A Comparison of Federal Equivalent Method PM2.5 Monitors to the Federal Reference Method

Kevin Goohs, Jeffrey Amb

SESSION 4

VOC/SVOC Method Development ........................................................................................................ 569

Chair: S. Parmar, AAC; Co-Chair: J. Swift, Eastern Research Group

Determination of Levels of Volatile Methyl Silicones in Air Samples from Across Canada .......................... 577

Mehran Alaee, Helena Steer, Jim Daley, L. Wade Bontempo

Identification of Hydrocarbons in Ambient Air ......................................................................................... 579

Randall Bramston-Cook, Edward Bramston-Cook

The Sampling and Analysis of Acrolein From Ambient Air Using O-Benzylhydroxylamine Coated Cartridges ......................................................................................................................... 585

Krista Parker, Eric Grosjean, Marcus Hueppe, Sucha Parmar

Improving Measurement Accuracy of Acrolein, Naphthalene and other more challenging compounds using EPA Method TO-15 ........................................................................................................................................ 593

Dan Cardin

The Measurement of Acrylonitrile ni Ambient Air Using Solid Sorbent Tubes and Thermal Desorption ........................................................................................................................................ 598

John R Bricarello

Critical Factors when Using Diffusive Samplers for 1 to 30 Day Sampling of VOCs ........................................ 603

Linda S. Coyne, Cindy Kuhlman, Joseph Chuda

Validating Instrument Performance for Measurement of Hydrocarbons in Ambient Air with a Gas Chromatograph and Dual Flame Ionization Detectors .................................................................................. 608

Randall Bramston-Cook, Edward Bramston-Cook

Identification of Organic Compounds in Air by Thermodesorption and Gas Chromatography / Mass Spectrometry ........................................................................................................................................ 614

Geraldine Leroy, Gaël Muckensturm, Valérie Ingrand

An Air Toxics Study in El Paso: Measurement Quality and Potential Health Risks ........................................... 619

Richard J. Tropp, Lung-Wen Chen, Dongzi Zhu, Judith C. Chow, John G. Watson, Barbara Zielinska, Wen-Whai Li

A Simple, More Reliable Time Integrated Whole Air Sampling Approach to EPA Method TO-15 using Helium Diffusion Sampling ........................................................................................................ 632

Daniel B. Cardin, Thomas X. Robinson, Chris J. Castel

High Performance Cryogen-free Automated Analysis of Canister Air Samples Using TD-GC/TOF MS and Automated Compound Identification Software ........................................................................... 637

Kurt Thaxton, Nicola M. Watson

Novel Approach to Co-Measurement of Volatile Organic Compounds and Sulphur Compounds in the Athabasca Oil Sands Region ........................................................................................................... 643

Bob O’Brien

Accurate Monitoring of Sulfur Compounds in Fused Silica Lined Canisters Utilizing a New Approach for Water Removal during Field Sampling ........................................................................................................ 648

Thomas X. Robinson, Daniel B. Cardin

Ambient Air Monitoring Results of Polychlorinated Dibenzo-p-dioxins, Polychlorinated Dibenzofurans, Polychlorinated Biphenyls, and Polybrominated Diphenylethers at Urban Areas in California from 2002 to 2006 ........................................................................................................ 652

Donald Hammond

Assessing Air Emissions of VOCs, Ammonia, Fixed Gases, and Siloxanes from Biofilters At Compost Facilities Using the SCAQMD Modified USEPA Surface Flux Chamber Technology ................................................................ 657

Tom Card, CE Schmidt, Lorrie Loder, Ron Mueshauer, Robert Rankin, Steve Hoyt

Evaluation Of The Urban Air Quality In Brazilian Midwest Region ........................................................................ 663

Edmilson De Souza, Josmar Davilson Pagliuso

Real Refractive Indices of a- and b-pinene and Toluene Secondary Organic Aerosols Generated from Ozonolysis and Photo-oxidation ........................................................................................................ 668

Hwa Jin Kim, Brian Barkey, Suzanne E. Paulson

Continuous Measurement Of Air Toxics In The Field ...................................................................................... N/A

R. Evans, American Ecotech
SESSION 5

Near Road Exposure Studies ................................................................. N/A
Chair:  P. Roberts, STI

Effect of Proximity to a Freeway with Heavy-duty Diesel Traffic on the Ambient Concentrations of
Criteria and Air Toxic Pollutants ............................................................... 673
Andrea Pollidori, Philip M. Fine

Near-Roadway Air Quality: Synthesizing the Findings from Real-World Data ........................................... N/A
A. Karner, D. Niemeier, University of California, Davis; D. Eisinger, Sonoma Technology, Inc.

Characterization of Aerosol at Several Near Road Schools in Las Vegas, Nevada ......................... 678
Steven G. Brown, Jennifer L. DeWinter, Paul T. Roberts

Near-Road Factors Explaining Spatial Variability in NOx Concentrations within Southern California
Communities ............................................................................................... 683
Fred Lurmann

Analysis of Factors Affecting Concentrations of Ultrafine Particles and Associated Pollutants on
Freeways ........................................................................................................ 688
Yifang Zhu

SESSION 6

Mobile Monitoring Platforms ................................................................. N/A
Chair:  S. Fruin, USC School of Medicine; Co-Chair: D. Westerdahl, California Air Resources Board

An Instrumentation Package for Measuring Commuter Exposure to Vehicle Exhaust Pollutants in
New Delhi, India ............................................................................................... 692
Joshua S. Apte, Thomas W. Kirchstetter, Julian D. Marshall, William W. Nazaroff

Spatial Resolution of Selected Combustion Sources in Tacoma, WA Using Mobile Monitoring .................. 698
Timothy V. Larson, Ji-Hyun Park, Cole T. Fitzpatrick, Christopher D. Simpson,

Long Term Monitoring of Greenhouse Gas Emissions from Fugitive and Area Sources .......................... 702
Ram Hashmonay

EPA’s Mobile Measurement of Source Emissions and Near-source Impact ........................................... 721
Richard Shores, Gayle Hagler, Eben Thoma, Richard Baldauf, Vlad Isakov

Community Scale Air Toxics Ambient Monitoring Mobile Station ............................................................ 745
Steve Boddeker, Andrea Pollidori, Philip M. Fine

Mobile Air Monitoring: Sometimes Simple is Best .................................................................................. 749
Dane Westerdahl, Khe Max Zhang, Scott Fruin

Standardization of Open Source Test Methods: Mobile Monitoring as a Case Study .............................. 780
Chatten Cowherd

Approaches and Methodologies for Measurement of Diesel Exhaust Self-Pollution in School Buses ........ 785
Eric Winegar, Scott Fruin, Jay Turner

SESSION 7

Panel – Monitoring Data: The Beginning or the End? .................................................................................. N/A
Chair:  E. Winegar, Applied Measurement Science; Co-Chair: H. Hafner, Sonoma Technology Inc.; Panelists: R.
Henry, University Southern California; P. Fine, South Coast Air Quality Management District; D. Westerdahl,
California Air Resources Board; R. Evans, American Ecotech; R. Tropp, Desert Research Institute

SESSION 8

Ozone Measurements and Studies .............................................................................................................. N/A
Chair:  K. Durkee, South Coast Air Quality Management District; Co-Chair: D. Fitz, University of California

A Comparison of Ambient Ozone Levels in Wyoming’s Upper Green River Basin with Utah’s Uintah
Basin during Winter 2010 ................................................................................ 792
William J. Hauze, Brian Olsen, Dan Risch, George Wilkerson

Measurement and Analysis of Boundary Air Quality and Meteorological Data for Ozone Attainment
Modeling of California’s South Coast Air Basin ......................................................................................... 797
Robert A. Baxter, Kevin R. Durkee, Sang-Mi Lee

Development of a Sensitive Analyzer for Fast and Direct Measurements of NO2 in Ambient Air ............. 802
Sabine Crunaire, Jean-Luc Mineau, Frédéric Antoine, Thierry Gonthiez, Guillaume Méjean, Daniele Romanini
Measurement of NOy, NO2, PAN, and k1 in Support of Ozone Characterization Studies ............................................. 807
Dennis Fitz, Kurt Bumiller

Speciation of VOCs from Complex Sources: Validation of Reactivity-Weighted Emissions ........................................ 810
Peter G. Green, Anuj Kumar, Isabel Faria, Michael J. Kleeman

Assessing Ozone Reactivity Emissions from a Biofilter at a Compost Facility Using the SCAQMD Modified USEPA Flux Chamber Technology and the UC Davis Mobile Ozone Chamber Assay Technology ................................................................. 815
Peter Green, Isabel Faria, Mike Kleenman, Zackary Kay, Randy French, Tom Card, CE Schmidt

SESSION 9

Vapor Intrusion ................................................................................................................................................................ N/A
Chair: C. Schmidt, Environmental Consultant

Optimizing Analytical Parameters for Soil Vapor Samples Using Automated Thermal Desorption/Gas Chromatography/Mass Spectrometry (ATD/GC/MS) ................................................................. 820
Lee Marotta, Miles Snow, Stephen Varisco, Tom Kwoka

Measurement of Toxic Chemicals in Vapor Intrusion Samples Over a Very Wide Concentration Range with Flame Ionization Prescreen and Automatic Selection of an Appropriate Analysis Method ........................................ 825
Edward H. Bramston-Cook, Stefan J. D’Angona, Mark Scesny, Randall Bramston-Cook

Comparison of Measured Flux Versus Modeled Flux of VOCs from a Groundwater Source - Case Study with Sideby-Side Flux and Soil Gas Measurements ................................................................. 830
Ranajit Sahu, Mark Jones, Ken Kiefer, CE Schmidt

A Turn-Key Solution for Indoor and Sub-Slab Vapor Intrusion Monitoring using Canisters that Provides Faster Sample Collection, Higher Molecular Weight Recovery, and More Advanced Leak Avoidance ................................................................. 840
Dan Cardin

SESSION 10

Quality Assurance and Data Interpretation ............................................................................................................. N/A
Chair: R. Tropp, Desert Research Institute

Artifact Adjustments to Organic Carbon Particulate Matter Concentrations in the IMPROVE Network .................................................................................................................................. 845
Ann M. Dillner, Charles E. McDade, Warren H. White

New Data Analysis Methods For Air Quality Measurements With Averaging Times Of Minutes ................................................................. 850
Ronald Henry

Wood Smoke Markers to Characterize Winter Season Contribution of Residential Wood Combustion to PM2.5 .................................................................................................................................. 855
Keith Jones

Chemical Mass Closure and Spatial and Seasonal Characteristics of Coarse Particulate Matter in the Los Angeles Area .................................................................................................................................. 861
Z. Ning, K. Cheung, W. Kam, N. Daheer, C. Sioutas

Statistical Comparison of Low Concentration Measurement Accuracy of Compliance and Trace Level Nitrogen Oxide Monitors .................................................................................................................................. 866
Miloslav Nosal, Allan H. Legge, Martin Hansen

PM2.5 Emissions: Do The New Test Methods Improve The Results? .................................................................................................................................. 874
Kevin Crosby

David H. Bush, David L. Yoho, Robert A. Baxter

Advanced Ambient Air Network Operations ............................................................................................................. 890
Will Breckenridge

Quality Assurance Protocol: Optical Remote Sensing ............................................................................................................. 897
Dennis K. Mikel

SESSION 11

Fine and Ultrafine Particles .................................................................................................................................. N/A
Chair: T. Hansen, Magee Scientific Corp.
Ozone Formation in Salt Lake and Utah Valley: Summer 2009 ................................................................. 902
Delbert J. Eaton, Jaron C. Hansen, R. Neal Olson

The “Micro” Aethalometer® – an Enabling Technology for New Applications in the Measurement of Aerosol Black Carbon .................................................................................................................. 908
Anthony D. A. Hansen, Grisha Mocnik

Measuring Trace Metal Concentrations in Diesel and Biodiesel Particulate Exhaust ........................................ 913
Jing Guo, Edward F. Peltier, Gwen L. Macpherson

PAX: a New Instrument to Measure Black Carbon Mass and Optical Properties of Aerosols ................................ 918
G. Kok, J. Walker, P. Arnott, I. Arnold, P. Keady, C. Hare

Design and Performance of New Instrument to Measure Fine and Ultra-fine Particles (UFP) in Ambient Air ................................................................................................................................. 937
Kathleen A. Erickson, Fredrick R. Quant, Sean Morell, Robert Caldow, Brian L. Osmondson

A Baseline Assessment and Comparison of Particulate Matter and Black Carbon Emissions from Gasoline Direct Injection Vehicles .................................................................................................................. 942
Michael A. Kamboures, Shishan Hu, Yong Yu, Sherry Zhang, Richard Ling, Julia Sandalow, Inna Zhema, Davey Ho, Paul Rieger

Residential Indoor Ultrafine Particle Measurements During Cooking Activities Using Gas and Electric Appliances ................................................................................................................................. 947
A. L. Wilson, Olexandr Karpukhin, Lance DeLaura

Inter-Community Variability In Total Particle Number Concentrations In Receptor Areas Of Los Angeles Air Basin ................................................................................................................................. 966

Techniques for Determining Partial Size Distribution of Particulate Matter in Egg Production Environment: Laser Diffraction versus Electrical Sensing Zone ................................................................. 972
Lingjuan Wang, Zihan Cao

The Influence of Local-Scale Meteorology on PM2.5 Concentrations in a Coastal Environment ................................ 980
Joel C. Torcolini, Gary E. Bertolin, M. Scott Weaver, Lisa Wunder, Christopher Patton

ADDITIONAL PRESENTATIONS

Air Exchange Rates of a Large, Representative Sample of California Vehicles and Predictive Models Useful for Epidemiological Studies ......................................................................................................... 989
Scott Fruin, Neelakshi Hudda, Costas Sioutas, Ralph Delfino

Application of a Tracer Dilution Method Using Cavity Ring Down Spectroscopy to Quantify Landfill Methane Emission ................................................................................................................................. 1014
Roger Green, Gary Hater, Nathan Swan, Eben Thoma, Jason DeWees, Chris Rella, Doug Goldsmith

Author Index
