2010 17th Asia Pacific Software Engineering Conference

(APSEC 2010)

Sydney, Australia
30 November – 3 December 2010
2010 Asia Pacific Software Engineering Conference
APSEC 2010

Table of Contents

Message from the General Chairss...........................................................................................................xi
Message from the Research Program Chairs..........................................................................................xii
Message from the Industry Program Chairs..........................................................................................xiii
Organizing Committee..................................................................................................................................xiv
Steering Committee...................................................................................................................................xv
Research Program Committee..................................................................................................................xvi
Industry Program Committee....................................................................................................................xviii
Additional Reviewers....................................................................................................................................xix

Keynotes

Changes in the Software Development Profession to Meet the Need for Innovation
from Businesses and Government ................................................................................................................1
   Martin Nally

The Data Deluge – How Software Engineering Can Help ...........................................................................2
   Judith Bishop

Requirements Engineering

Enhancing Domain Knowledge for Requirements Elicitation with Web Mining .........................................3
   Haruhiko Kaiya, Yuutarou Shimizu, Hirotaka Yasui, Kenji Kaijiri, and Motoshi Saeki

A Method for Exception Scenarios Generation Using Templates of Exceptions .......................................13
   Hiroki Shudo and Atsushi Ohnishi

A Formalism for Extending the NFR Framework to Support the Composition of the Goal Trees ......................23
   Bo Wei, Zhi Jin, and Lin Liu
SQ^2E: An Approach to Requirements Validation with Scenario Question ........................................33
   Daniel Aceituna, Hyunsook Do, and Seok-Won Lee

Quantitative Analysis of Requirements Evolution across Multiple Versions of an Industrial Software Product .................................................................43
   Hailong Wang, Juan Li, Qing Wang, and Ye Yang

A Model and Architecture of REBOK (Requirements Engineering Body of Knowledge) and Its Evaluation ........................................................................50
   Mikio Aoyama, Takako Nakatani, Shinobu Saito, Mikio Suzuki, Kazuaki Fujita,
   Hiroaki Nakazaki, and Ritsuo Suzuki

Software Architectures, Components and Objects

Evaluating Cloud Platform Architecture with the CARE Framework ................................................60
   Liang Zhao, Anna Liu, and Jacky Keung

Genetic Approach to Software Architecture Synthesis with Work Allocation Scheme .....................70
   Hadaytullah, Outi Räihä, and Kai Koskimies

Rule-Based Composition Behaviors in Dynamic Plug-In Systems .....................................................80
   Markus Jahn, Markus Löberbauer, Reinhard Wolfinger, and Hanspeter Mössenböck

ESAD: An Intensive Retreat Program for Embedded System Architect Developing ..........................90
   Yoshiaki Matsuzawa, Yasuhiro Noguchi, Takao Mori, Satoshi Shima, and Akichika Shiomi

Model Driven Software Engineering

Integrating Non-functional Requirement Modeling into Model Driven Development Method ................98
   Yi Liu, Zhiyi Ma, and Weizhong Shao

Detailed Real-Time Software Platform Modeling .............................................................................108
   W. El Hajj Chehade, A. Radermacher, S. Gérard, and F. Terrier

The Analysis of Sequence Diagram with Time Properties in Qualitative and Quantitative Aspects by Model Transformation ..................................................118
   Meixia Zhu, Hanpin Wang, Yongzhi Cao, Zizhen Wang, and Wei Jin
Software Patterns and Product Lines
Supporting Flexible Reification of Design Patterns ................................................................. 127
  Wuwei Shen, Dae-Kyoo Kim, Jian Liu, and Chen Zhao

Quality Attributes Assessment for Feature-Based Product Configuration in Software
Product Line ............................................................................................................................... 137
  Guoheng Zhang, Huilin Ye, and Yuqing Lin

Approaching Non-functional Properties of Software Product Lines: Learning
from Products .................................. 147
  Julio Sincero, Wolfgang Schröder-Preikschat, and Olaf Spinczyk

Service Oriented Software Systems
Supporting Change Propagation in the Maintenance and Evolution of Service-Oriented
Architectures ............................................................................................................................... 156
  Hoa Khanh Dam and Aditya Ghose

Model-Based Methods for Linking Web Service Choreography and Orchestration .................. 166
  Jun Sun, Yang Liu, Jin Song Dong, Geguang Pu, and Tian Huat Tan

Aspect Oriented Approach to Building Secure Service Composition ......................................... 176
  Guisheng Fan, Huiqun Yu, Liqiong Chen, and Dongmei Liu

Software Security, Safety and Reliability
Assessing the Impact of Refactoring on Security-Critical Object-Oriented Designs ..................... 186
  Bandar Alshammari, Colin Fidge, and Diane Corney

Bridging the Gap between Fault Trees and UML State Machine Diagrams for Safety
Analysis ................................................................................................................................. 196
  HyeonJeong Kim, W. Eric Wong, Vidroha Debroy, and DooHwan Bae

Evaluating the Reliability of Web Services Based on BPEL Code Structure Analysis
and Run-Time Information Capture ......................................................................................... 206
  Bixin Li, Xiaocong Fan, Ying Zhou, and Ziyong Su
Formal Methods

Formal Transformation from Sequence Diagrams to Coloured Petri Nets ................................................................. 216
  Juliana Bowles and Dulani Meedeniya

A Formal Framework to Optimise Component Dependency Resolution .................................................................... 226
  Graham D. Jenson, Jens Dietrich, and Hans W. Guesgen

A Formal Model for Supporting Frameworks of Dynamic Service Update Based on OSGi ......................................................... 234
  Junqing Chen, Linpeng Huang, Siqi Du, and Wenjia Zhou

System Interactions

Lazy Runtime Verification for Constraints on Interacting Objects ........................................................................... 242
  Jin Shao, Fang Deng, Haiwen Liu, Qianxiang Wang, and Hong Mei

An Interaction-Pattern-Based Approach to Prevent Performance Degradation of Fault Detection in Service Robot Software ........................................................................................................... 252
  Seung-Yeol Seo, Hyung-Min Koo, and In-Young Ko

Testing Inter-layer and Inter-task Interactions in RTES Applications ........................................................................ 260
  Ahyoung Sung, Witawas Srisa-an, Gregg Rothermel, and Tingting Yu

Software Testing

An Automatic Testing Approach for Compiler Based on Metamorphic Testing Technique .................................................................. 270
  Qiuming Tao, Wei Wu, Chen Zhao, and Wuwei Shen

Combinatorial Testing with Shielding Parameters .................................................................................................................. 280
  Baiqiang Chen, Jun Yan, and Jian Zhang

A Hierarchical Model for Regression Test Selection and Cost Analysis of Java Programs ........................................ 290
  Chuanqi Tao, Bixin Li, Xiaobing Sun, and Ying Zhou

Evaluating Mutation Testing Alternatives: A Collateral Experiment ........................................................................... 300
  Marinos Kintis, Mike Papadakis, and Nicos Malevris
