2010 IEEE 31st Real-Time Systems Symposium

(RTSS 2010)

San Diego, California, USA
30 November – 3 December 2010
Session 1: Multiprocessors I
Supporting Soft Real-Time DAG-Based Systems on Multiprocessors with No Utilization Loss ................................................................. 3
   Cong Liu and James H. Anderson
An Empirical Comparison of Global, Partitioned, and Clustered Multiprocessor EDF Schedulers ................................................................. 14
   Andrea Bastoni, Björn B. Brandenburg, and James H. Anderson
LLF Schedulability Analysis on Multiprocessor Platforms ................................................................. 25
   Jinkyu Lee, Arvind Easwaran, and Insik Shin
Minimizing Task Preemptions and Migrations in Multiprocessor Optimal Real-Time Schedules ................................................................. 37
   Thomas Megel, Renaud Sirdey, and Vincent David

Session 2: Blocking, Locking, and Versioning
Optimality Results for Multiprocessor Real-Time Locking ................................................................. 49
   Björn B. Brandenburg and James H. Anderson
Bounding the Number of Self-Blocking Occurrences of SIRAP ................................................................. 61
   Moris Behnam, Thomas Nolte, and Reinder J. Bril
Reasoning About the Reliability of Multi-version, Diverse Real-Time Systems ................................................................. 73
   A. Burns and B. Littlewood
Session 3A: Cyber-Physical Systems

Feedback Control of Cyber-physical Systems with Multi Resource Dependencies and Model Uncertainties .................................................................85
   Mikael Lindberg and Karl-Erik Årzén
Dynamic Scheduling and Control-Quality Optimization of Self-Triggered Control Applications ..............................................................................................................95
   Soheil Samii, Petru Eles, Zebo Peng, Paulo Tabuada, and Anton Cervin
A Design Flow for Building Automation and Control Systems ........................................105
   Yang Yang, Alessandro Pinto, Alberto Sangiovanni-Vincentelli, and Qi Zhu
Fidelity-Aware Utilization Control for Cyber-Physical Surveillance Systems .................117
   Jinzhu Chen, Rui Tan, Guoliang Xing, Xiaorui Wang, and Xing Fu

Session 3B: WSN Algorithms and Improvements

Prolonging Sensor Network Lifetime Through Wireless Charging ................................129
   Yang Peng, Zi Li, Wensheng Zhang, and Daji Qiao
Optimal Schedules for Sensor Network Queries .............................................................140
   Sathish Gopalakrishnan
Real-Time Scheduling for WirelessHART Networks .....................................................150
   Abusayeed Saifullah, You Xu, Chenyang Lu, and Yixin Chen
Quality Tradeoffs in Object Tracking with Duty-Cycled Sensor Networks ..................160
   Sadaf Zahedi, Mani B. Srivastava, Chatschik Bisdikian, and Lance M. Kaplan

Session 4A: Uniprocessor Scheduling

The Non-cyclic Recurring Real-Time Task Model .........................................................173
   Sanjoy Baruah
An Algorithm for Scheduling Certifiable Mixed-Criticality Sporadic Task Systems ........183
   Haohan Li and Sanjoy Baruah
Optimizing Expected Time Utility in Cyber-Physical Systems Schedulers ....................193
   Terry Tidwell, Robert Glaubius, Christopher D. Gill, and William D. Smart

Session 4B: WSN Systems Issues and Techniques

LISTEN: Non-interactive Localization in Wireless Camera Sensor Networks .................205
   Yuan He, Xingfa Shen, Yuhao Liu, Lufeng Mo, and Guojun Dai
System-Level Calibration for Fusion-Based Wireless Sensor Networks ......................215
   Rui Tan, Guoliang Xing, Zhaohui Yuan, Xue Liu, and Jianguo Yao
Overloading an IEEE 802.15.4 Point-to-Point Connection with Real-Time Messages ......225
   Marc Aoun and Peter van der Stok
Session 5A: Multiprocessors II
Assigning Real-Time Tasks on Heterogeneous Multiprocessors with Two Unrelated Types of Processors ................................................................. 239
  Björn Andersson, Gurulingesh Raravi, and Konstantinos Bletsas
A Framework for Hierarchical Scheduling on Multiprocessors: From Application Requirements to Run-Time Allocation ................................................. 249
  Giuseppe Lipari and Enrico Bini
Scheduling Parallel Real-Time Tasks on Multi-core Processors ................................................................. 259
  Karthik Lakshmanan, Shinpei Kato, and Ragunathan (Raj) Rajkumar

Session 5B: WSN Applications
Quality-Driven Volcanic Earthquake Detection Using Wireless Sensor Networks ............................................ 271
  Rui Tan, Guoliang Xing, Jinzhu Chen, Wen-Zhan Song, and Renjie Huang
Lightweight Extraction of Frequent Spatio-Temporal Activities from GPS Traces ........................................... 281
  Athanasios Bamis and Andreas Savvides
Adaptive Voice Stream Multicast Over Low-Power Wireless Networks ................................................................. 292
  Liqun Li, Guoliang Xing, Qi Han, and Limin Sun

Session 6: Data Flows, Networks, and Distributed Systems
End-to-End Delay Bound for Prioritized Data Flows in Disruption-Tolerant Networks ........................................... 305
  Md. Yusuf Sarwar Uddin, Fatemeh Saremi, and Tarek Abdelzaher
On Structural Robustness of Distributed Real-Time Systems Towards Uncertainties in Service Times ................................................................. 317
  Praveen Jayachandran and Tarek Abdelzaher
A Decentralized Approach for Monitoring Timing Constraints of Event Flows .................................................... 327
  Hyoseung Kim, Shinyoung Yi, Wonwoo Jung, and Hojung Cha

Session 7: Design and Verification I
Combining Abstract Interpretation with Model Checking for Timing Analysis of Multicore Software ................................................................. 339
  Mingsong Lv, Wang Yi, Nan Guan, and Ge Yu
Memory-Aware Optimal Scheduling with Communication Overhead Minimization for Streaming Applications on Chip Multiprocessors ........................................... 350
  Yi Wang, Duo Liu, Zhiwei Qin, and Zili Shao
Fully Symbolic Timed Model Checking Using Constraint Matrix Diagrams .................................................... 360
  Rüdiger Ehlers, Daniel Fass, Michael Gerke, and Hans-Jörg Peter
Session 8: Design and Verification II

An Evaluation of SMT-Based Schedule Synthesis for Time-Triggered Multi-hop Networks
Wilfried Steiner .................................................................375

Scheduling for Fault-Tolerant Communication on the Static Segment of FlexRay
Bogdan Tanasa, Unmesh D. Bordoloi, Petru Eles, and Zebo Peng 385

A More Precise Abstract Domain for Multi-level Caches for Tighter WCET Analysis
Tyler Sondag and Hridesh Rajan 395

Author Index .................................................................................................405
