2010 IEEE/IFIP 8th International Conference on Embedded and Ubiquitous Computing

(EUC 2010)

Hong Kong, China
11 – 13 December 2010
# Table of Contents

Message from the EUC 2010 General Chairs ................................................................. xvii
Message from the EUC 2010 Program Chairs ............................................................... xviii
Message from the EUC 2010 Steering Committee Chairs .............................................. xix
Message from the EUC 2010 Workshop/Symposium Chairs ......................................... xx
EUC 2010 Organizing and Program Committees ........................................................... xxi
EUC 2010 Additional Reviewers .................................................................................... xxviii
Message from the TrustCom 2010 Symposium Chairs .................................................. xxix
Message from the UUWSN 2010 Workshop Chairs ..................................................... xxx
Message from the CSIOT 2010 Workshop Chairs ......................................................... xxxi
Message from the SeNAmI 2010 Workshop Chairs ...................................................... xxxii
Message from the ICNA 2010 Workshop Chairs .......................................................... xxxiv
TrustCom 2010 Organizing and Program Committees ................................................... xxxv
UUWSN 2010 Organizing and Program Committees ..................................................... xxxvi
SeNAmI 2010 Organizing and Program Committees ...................................................... xxxvii
WiNA 2010 Organizing and Program Committees ....................................................... xxxviii
ICNA 2010 Organizing and Program Committees ........................................................ xl
Keynotes ..................................................................................................................... xli

---

### The 8th IEEE/IFIP International Conference on Embedded and Ubiquitous Computing (EUC 2010)

#### Embedded Systems Software and Optimization

Schedule Swapping: A Technique for Temperature Management of Distributed Embedded Systems ................................................................. 1

*Farzad Samie Ghahfarokhi and Alireza Ejlali*

User-Level Network Protocol Stacks for Automotive Infotainment Systems ................................. 7

*Mu-Youl Lee and Hyun-Wook Jin*
## Replay Debugging for Multi-threaded Embedded Software

*Yann-Hang Lee, Young Wn Song, Rohit Girme, Sagar Zaveri, and Yan Chen*

---

## Real-time Enhancement for Xen Hypervisor

*Peijie Yu, Mingyuan Xia, Qian Lin, Min Zhu, Shang Gao, Zhengwei Qi, Kai Chen, and Haibing Guan*

---

### Embedded Systems and Hardware/Software Co-Design

#### Optimized Schedule Synthesis under Real-Time Constraints for the Dynamic Segment of FlexRay

*Reinhard Schneider, Unmesh Bordoloi, Dip Goswami, and Samarjit Chakraborty*

---

#### Optimizing Runtime Reconfiguration Decisions

*Thilo Pionteck, Steffen Sammann, and Carsten Albrecht*

---

#### Architectural Support for Reducing Parallel Processing Overhead in an Embedded Multiprocessor

*Jian Wang, Joar Sohl, and Dake Liu*

---

#### Trading Conditional Execution for More Registers on ARM Processors

*Huang-Jia Cheng, Yuan-Shin Hwang, Rong-Guey Chang, and Cheng-Wei Chen*

---

#### An Environment for Design Software and Hardware Aspects of Clock Synchronization and Communication in DRTES

*Brahim Hamid and Adel Ziani*

---

#### Implementation of a Floating Point Adder and Subtractor in NoGAP, A Comparative Case Study

*Per Karlström, Wenbiao Zhou, and Dake Liu*

---

#### Co-Simulation of Self-Adaptive Automotive Embedded Systems

*Marc Zeller, Gereon Weiss, Dirk Eilers, and Rudi Knorr*

---

### Middleware for Ubiquitous and Autonomous Computing

#### Empirical Evaluation of Content-based Pub/Sub Systems over Cloud Infrastructure

*Biao Zhang, Bei Hong Jin, Haibiao Chen, and Ziyuan Qin*

---

#### A Reflective Service Gateway for Integrating Evolvable Sensor-Actuator Networks with Pervasive Infrastructure

*Seong Hoon Kim, Daeyoung Kim, Jeong Seok Kang, and Hong Seong Park*

---

#### Handling Mobility on a QoS-Aware Service-based Framework for Mobile Systems

*Joel Goncalves, Luis Lino Ferreira, Luis Miguel Pinho, and Guilherme Silva*
Trust Measurement Methods in Organic Computing Systems by Direct Observation .......................................................... 105
  Rolf Kiefhaber, Benjamin Satzger, Julia Schmitt, Michael Roth, and Theo Ungerer

Mobile and Context-aware Computing
GEDS: GPU Execution of Continuous Queries on Spatio-Temporal Data Streams ........................................................................................................ 112
  Jonathan Cazalas and Ratan Guha

Rule-based Approach for Context Inconsistency Management Scheme in Ubiquitous Computing ................................................................. 120
  Yong-jae Lee, Jaehyoung Lim, Soon J. Hyun, and Dongman Lee

Transferring Ontologies between Mobile Devices and Knowledge-Based Systems .................................................................................................. 127
  Xiang Su and Jukka Riekki

Middleware Support for Context-awareness in Asynchronous Pervasive Computing Environments ........................................................................ 136
  Jianping Yu, Yu Huang, Jiannong Cao, and Xianping Tao

Cyber-Physical Systems and the Internet of Things
An Application Framework for Loosely Coupled Networked Cyber-Physical Systems ............................................................................................... 144
  Minyoung Kim, Mark-Oliver Stehr, Jinwoo Kim, and Soonhoi Ha

LocaToR: Locating Passive RFID Tags with the Relative Neighborhood Graph .................................................................................................. 154
  Yiyang Zhao, S.C. Cheung, and Lionel M. Ni

An OSGi Based RFID Complex Event Processing System ....................................................................................................................... 162
  Hou Weifeng, Hou Di, and Chen Juan

Power-Aware Computing
Real-Time Constrained Task Scheduling in 3D Chip Multiprocessor to Reduce Peak Temperature ................................................................. 170
  Jiayin Li, Meikang Qiu, Jianwei Niu, Tianzhou Chen, and Yongxin Zhu

Improving the Accuracy of Object Tracking in Three Dimensional WSNs Using Bayesian Estimation Methods ................................................ 177
  Junzhao Du, Lei Mao, Hui Liu, Bo Wu, and Deke Guo

Power Management in Real Time Embedded Systems through Online and Adaptive Interplay of DPM and DVFS Policies ................................ 184
  Khurram Bhatti, Cécile Belleudy, and Michel Auguin
A Connection-assured Many-to-one Communication of Wireless Sensors with Two Transmission Ranges .................................................................................................................. 192

Wan Yeon Lee, Hyung Goo Paek, Jeong-Mo Yeo, and Kyong Hoon Kim

**Sensor Networks**

Partitioning Detection and Connectivity Restoration Algorithm for Wireless Sensor and Actor Networks .................................................................................................................. 200

Muhammad Imran, Mohamed Younis, Abas Md. Said, and Halabi Hasbullah

Towards Precise Synchronisation in Wireless Sensor Networks .................................................................................................................. 208

Lawrence Cheng, Stephen Hailes, and Alan Wilson

On Efficient Clock Drift Prediction Means and their Applicability to IEEE 802.15.4 .................................................................................................................. 216

Marcin Brzozowski, Hendrik Salomon, and Peter Langendoerfer

RISN: An Efficient, Dynamically Tasked and Interoperable Sensor Network Overlay .................................................................................................................. 224

Evens Jean, Robert T. Collins, Ali R. Hurson, Sahra Sedigh, and Yu Jiao

Efficient Data Delivery in Wireless Sensor Networks with Ubiquitous Mobile Data Collectors .................................................................................................................. 232

Weiwei Jiao, Long Cheng, Min Chen, Canfeng Chen, and Jian Ma

Virtual Brokers for Large-Scale Publish/Subscribe in Wireless Sensor Networks .................................................................................................................. 240

Yang Liu, Boon-Chong Seet, and Adnan Al-Anbuky

**Multimedia and Data Management**

Multi-resolution Next Location Prediction for Distributed Virtual Environments .................................................................................................................. 247

Jaroslav Pribyl and Pavel Zemcik

Trick Play Function for VOD with SVC source .................................................................................................................. 255

Peng Zhu, Hideya Yoshiuchi, and Satoshi Yoshizawa

OCO: A Multi-channel MAC Protocol with Opportunistic Cooperation for Wireless Sensor Networks .................................................................................................................. 260

Jinbao Li, Desheng Zhang, and Longjiang Guo

Video Streaming over Wireless Mesh Networks with Multi-Gateway Support .................................................................................................................. 268

Huali Cui, Depei Qian, Xingjun Zhang, and Yi Liu
Real-Time Systems and Wireless Mesh Networks

Hierarchical Real-Time Scheduling Framework for Imprecise Computations ..................................................273
Guy Martin Tchamgoue, Kyong Hoon Kim, Yong-Kee Jun, and Wan Yeon Lee

Preemption Control Using Frequency Scaling in Fixed Priority Scheduling ......................................................281
Abhilash Thekkilakattil, Anju S. Pillai, Radu Dobrin, and Sasikumar Punnekkat

Hierarchical Cooperative Data Caching for Wireless Mesh Networks ..........................................................289
Weigang Wu and Yifei Huang

The 8th IEEE/IFIP International Conference on Embedded and Ubiquitous Computing
(Workshops / Symposiums 2010)

UUWSN - 1: Architecture Design

Adaptive GTS Allocation Scheme based on IEEE 802.15.4 for Underwater Acoustic Sensor Networks ..........................297
Jung-Il Namgung, Soo-Young Shin, Nam-Yeol Yun, and Soo-Hyun Park

Design and Implementation of the Test-bed for Underwater Acoustic Sensor Network Based on ARM9 Processor ..........................................................302
Yung-Pyo Kim, Jung-Il Namgung, Nam-Yeol Yun, Hui-Jin Cho, Imtiaz Ahmed Khan, and Soo-Hyun Park

The Architecture of Surface Gateway for Underwater Acoustic Sensor Networks ..................................................307
Youngjun Jo, Jungyoung J Bae, Hyunjae Shin, Heungwoo Nam, Saeyoung Ahn, and Sunshin An

UUWSN - 2: Tracking and Localization

Bearings-only Tracking Systems with Distributed Floating Beacons in Underwater Sensor Networks ........................................311
Eunchan Kim, Sangho Lee, Chungsan Kim, and Kiseon Kim

Localization with a Mobile Beacon in Underwater Sensor Networks ...................................................................316
Sangho Lee and Kiseon Kim

Communication in a Behavior-based Approach to Target Detection and Tracking with Autonomous Underwater Vehicles ........................................320
Laura Sorbi, Laura Toni, Graziano Pio De Capua, and Lorenzo Rossi
UUWSN - 3: Communication and Implementation

Experimental Results of Single Carrier Digital Modulation for Underwater Sensor Networks .................................................. 326

Se-young Kim, Jeong-woo Han, Ki-man Kim, Sang-hoon Baek, Hyung-chul Kim, and Chang-hwa Kim

Robot Control Using an Underwater Acoustic Modem ................................................................. 331

Jun-Ho Jeon, Chang-Gi Hong, Sung-Joon Park, Chang-hwa Kim, and Sangkyung Kim

A Study on the Underwater Acoustic Communication with Direct Sequence Spread Spectrum .................................................. 337

Se-young Kim, Ki-man Kim, Won-seok Choi, Min-jae Kim, Seung-yong Chun, and Kwon Son

The International Workshop on Constructing Software for Internet of Things (CSIOT 2010)

CSIOT - 1: Software Design for Internet of Things

Semantic Device Bus for Internet of Things .................................................................................. 341

Kun Yang, Shijian Li, Li Zhang, and Gang Pan

IOT Gateway: Bridging Wireless Sensor Networks into Internet of Things .................................... 347

Qian Zhu, Ruicong Wang, Qi Chen, Yan Liu, and Weijun Qin

Spatio-Temporal Events in the Internet of Things ......................................................................... 353

Beihong Jin and Haibiao Chen

Implementation of Cloud Computing Environment for Discrete Event System Simulation using Service Oriented Architecture ................................................................. 359

Chungman Seo, Youngshin Han, Haeyoung Lee, Jason J. Jung, and Chilgee Lee

UbiCloud: A Cloud Computing System for Ubiquitous Terminals Based on End User Virtualization ................................................................. 363

Yuanfei Chen, Zhenmin Zhu, Yi Zeng, and Zhe He

The 3rd International Workshop on Sensor Networks and Ambient Intelligence (SeNAmI 2010)

SeNAmI - 1: Communication and Energy Consumption

Repair Policies of Coverage Holes Based Dynamic Node Activation in Wireless Sensor Networks .................................................. 368

Xiao-Heng Deng, Chu-Gui Xu, Fu-Yao Zhao, and Yi Liu
A Method for Dimensioning Micro-Scale Solar Energy Harvesting Systems
Based on Energy Level Simulations ................................................................. 372

Sebastian Bader, Torsten Schölzel, and Bengt Oelmann

Online Personal Connection Presentation System for Communication
Assistance ........................................................................................................... 380

Ryota Ayaki, Hideki Shimada, and Kenya Sato

SeNAmI - 2: Context-aware Design
A Light Reasoning Infrastructure to Enable Context-aware Mobile
Applications .......................................................................................................... 386

Josué Iglesias, Ana M. Bernardos, Alejandro Álvarez, and Marcos Sacristán

Context Awareness Aims at Novel Fruition Models: Augmented Reality May
be the Killer Application for Context Awareness ................................................ 392

Claudio Vemezia and Marco Marengo

When Ambient Intelligence Meets Internet Protocol Stack: User Layer Design ........................................ 397

Yu Lu, Mehul Motani, and Wai-Choong Wong

SeNAmI - 3: Cluster and Ambient Intelligence
An Efficient Clustering Algorithm Using Evolutionary HMM in Wireless
Sensor Networks ............................................................................................... 403

Rouhollah Goudarzi, Behrouz Jedari, and Masoud Sabaei

Two-Tier Cluster Based Routing Protocol for Wireless Sensor Networks ........................................ 410

Asif U. Khattak, Ghalib A. Shah, and M. Ahsan

Ambient Intelligence, Smart Objects and Sensor Networks: Practical
Experiences .......................................................................................................... 416

Elisabetta Farella

The 3rd International Workshop on Wireless Network Algorithm and Theory (WiNA 2010)

WiNA - 1: Secured and Efficient Sensor Networks
A Deterministic Key Management Scheme for Securing Cluster-Based
Sensors Networks ............................................................................................... 422

Mandicou Ba, Ibrahima Niang, Bamba Gueye, and Thomas Noel

A Fast Heuristic for Solving the D1EC Coloring Problem ........................................ 428

Fabio Campoccia and Vincenzo Mancuso

Energy Balanced Routing Strategy in Wireless Sensor Networks ........................................ 436

Xiaoguang Zhang and Zheng Da Wu
WiNA - 2: Interference, Coverage and Power Control

Interference Minimization in Wireless Networks ........................................................................................................... 444
Hakob Aslanyan and Jose Rolim

Avoidance of Blind Period for Node Coverage Grouping on Wireless Sensor Networks ................................................................. 450
Chow-Sing Lin and Chih-Chung Chen

Predictive Power Control for Mobile Wireless Networks with Time-Varying Delay ................................................................................................................. 456
Cunwu Han, Dehui Sun, Zhijun Li, and Mingyue Zhao

The International Workshop on Challenged Network Architecture (ICNA 2010)

ICNA10-1: Mobility and Routing

RWPAD: A Mobility Model for DTN Routing Performance Evaluation .......................................................................................... 460
Yong Wang, Wei Peng, Xilong Mao, and Zhenghu Gong

Uncertainty Reasoning on Fuzziness and Randomness in Challenged Networks .................................................................................. 466
Yang Li, Jing Wang, Yaowen Yuan, Xiumei Fan, and Qian He

Spray and Routing for Message Delivery in Challenged Networks ............................................................................................................................. 472
Wanrong Yu, Chunqing Wu, and Xiaofeng Hu

International Symposium on Trusted Computing and Communications (TRUSTCOM 2010)

Trust Management and Evaluation

M-Trust: A Trust Management Scheme for Mobile P2P Networks ............................................................................................. 476
Basit Qureshi, Geyong Min, and Demetres Kouvatsos

A Dynamic Trust Establishment and Management Framework for Wireless Sensor Networks ................................................................. 484
Junqi Zhang, Rajan Shankaran, Mehmet A. Orgun, Vijay Varadharajan, and Abdul Sattar

Trusted Risk Evaluation and Attribute Analysis in Ad-Hoc Networks Security Mechanism based on Projection Pursuit Principal Component Analysis ........................................................................................................ 492
Jihang Ye, Mengyao Liu, and Cai Fu

Trust Management in Wireless Mobile Networks with Cooperative Communications .................................................................................. 498
Reyhaneh Changiz, Hassan Halabian, F. Richard Yu, Ioannis Lambadaris, and Helen Tang

Sara Guimarães, Arlei Silva, Wagner Meira Jr., and Adriano Pereira
Node Trust Assessment in Mobile Ad Hoc Networks Based on Multi-dimensional Fuzzy Decision Making .................................................. 511
  Zhang Feng, Jia Zhi-ping, Li Xin, and Xia Hui

The Deficit and Dynamics of Trust .................................................................................................................. 517
  Abhaya C. Nayak

**Attack Detection**

On the Security of Non-Linear HB (NLHB) Protocol against Passive Attack .......................................................... 523
  Mohammad Reza Sohizadeh Abyaneh

Detecting Security Attacks in Trusted Virtual Domains ................................................................................... 529
  Udaya Kiran Tupakula and Vijay Varadharajan

PDVDS: A Pattern-Driven Software Vulnerability Detection System .................................................................. 536
  Shaoyin Cheng, Jinding Wang, Jiajie Wang, Jun Yang, and Fan Jiang

Detection and Prevention of Routing Intrusions in Mobile Ad Hoc Networks .............................................. 542
  Pradeep Moradiya and Srinivas Sampalli

Monitoring Library Function-based Intrusion Prevention System with Continuing Execution Mechanism .................................................. 548
  Yudai Kato, Yuji Makimoto, Hironori Shirai, Hiromi Shimizu, Yusuke Furuya, Shoichi Saito, and Hiroshi Matsuo

On the Sender Cover Traffic Countermeasure against an Improved Statistical Disclosure Attack .......................................................... 555
  Rajiv Bagai, Huabo Lu, and Bin Tang

Passive Worm and Malware Detection in Peer-to-Peer Networks .................................................................... 561
  Sahar Fahimian, Amirvala Movahed, and Mehdi Kharrazi

**Authentication and Digital Signature**

Combined Authentication and Quality of Service in Cooperative Communication Networks .......................................................... 566
  Ramya Ramamoorthy, F. Richard Yu, Helen Tang, and Peter Mason

Hierarchical Certificateless Signatures ........................................................................................................... 572
  Lei Zhang, Qianhong Wu, Josep Domingo-Ferrer, and Bo Qin

A Novel Secure Bilinear Pairing Based Remote User Authentication Scheme with Smart Card .......................................................... 578
  Majid Bayat, Mohammad Sabzinejad, and Amirvala Movahed

Efficient RFID Authentication Scheme for Supply Chain Applications .......................................................... 583
  Fei Bi and Yi Mu
Trust-Based Authentication for Secure Communication in Cognitive Radio Networks ................................................................. 589
Sazia Parvin, Song Han, Biming Tian, and Farookh Kadeer Hussain

Cryptography and Security Protocols
A Scalable Encryption Scheme for Multi-Privileged Group Communications ................................................................. 597
Qiushuang Du, Guojun Wang, and Qin Liu
Side-Channel Resistance Evaluation of a Neural Network Based Lightweight Cryptography Scheme ................................................................. 603
Marc Stöttinger, Sorin A. Huss, Sascha Mühlbach, and Andreas Koch
Security of the TCG Privacy-CA Solution ................................................................. 609
Liqun Chen and Bogdan Warinschi
A Key Management Protocol for Multiphase Hierarchical Wireless Sensor Networks ................................................................. 617
Biming Tian, Song Han, Sazia Parvin, and Tharam S. Dillon
Designing Security Protocols Adapted to the Constraints of Mobile Environments ................................................................. 624
M. Kamel, K. Boudaoud, S. Lequeux, and M. Riveill
Extending a Key-Chain Based Certified Email Protocol with Transparent TTP ................................................................. 630
Zhiyuan Liu, Jun Pang, and Chenyi Zhang
Modelling Smart Card Security Protocols in SystemC TLM ................................................................. 637
Aisha Bushager and Mark Zwolinski

Trusted Services and Applications
Secret Key Generation Rate vs. Reconciliation Cost Using Wireless Channel Characteristics in Body Area Networks ................................................................. 644
Syed Taha Ali, Vijay Sivaraman, and Diethelm Ostry
A Secure Self-Destructing Scheme for Electronic Data ................................................................. 651
Fengshun Yue, Guojun Wang, and Qin Liu
Modeling and Robust Control for Trusted Web Server ................................................................. 659
Bing Du and Chun Ruan
Trusted Routing for Resource-Constrained Wireless Sensor Networks ................................................................. 666
Khaled Daabaj, Mike Dixon, Terry Koziniec, and Kevin Lee
Secure Mobile Business Information Processing ................................................................. 672
Nicolai Kuntze, Roland Rieke, Günther Diederich, Richard Sethmann, Karsten Sohr, Tanveer Mustafa, and Kai-Oliver Detken
Simulator Problem in User Centric Smart Card Ownership Model ................................................................. 679
Raja Naeem Akram, Konstantinos Markantonakis, and Keith Mayes
Phase Characterization and Classification for Micro-architecture Soft Error .................................................. 687
Yu Cheng, Anguo Ma, Yuxing Tang, and Minxuan Zhang

**Trusted Network Computing**

An Access Control Architecture for Distributing Trust in Pervasive Computing Environments ................................................................. 695
Raquel Hill, Jalal Al-Muhtadi, and William E. Byrd

Formal Trust Specification in Service Workflows .................................................................................................................. 703
Wattana Viriyasitavat and Andrew Martin

Capability-Role-Based Delegation in Workflow Systems ........................................................................................................... 711
Koji Hasebe and Mitsuhiro Mabuchi

SimTrust: A New Method of Trust Network Generation ........................................................................................................... 718
Touhid Bhuiyan, Yue Xu, and Audun Jøsang

Above the Trust and Security in Cloud Computing: A Notion Towards Innovation .................................................................................. 723
Mahbub Ahmed, Yang Xiang, and Shawkat Ali

Probabilistic Analysis on Mesh Network Fault Tolerance: Deterministic vs. Stochastic .................................................................................. 731
Gaocai Wang, Taoshen Li, and Jianer Chen

**Trust in Mobile and Wireless Networks**

S-Kcore: A Social-aware Kcore Decomposition Algorithm in Pocket Switched Networks ........................................................................... 737
Ming Li, Longxiang Gao, and Wanlei Zhou

Key Sharing in Hierarchical Wireless Sensor Networks .............................................................................................................. 743
Ya-nan Liu, Jian Wang, He Du, and Liang Zhang

The Cost of Altruistic Punishment in Indirect Reciprocity-based Cooperation in Mobile Ad Hoc Networks ............................................... 749
Marcin Seredyński and Pascal Bouvry

TARo: Trusted Anonymous Routing for MANETs ......................................................................................................................... 756
Jiefeng (Terence) Chen, Roksana Boreli, and Vijay Sivaraman

A Routing Algorithm Based on Trustworthy Core Tree for WSN ................................................................................................. 763
Jiang-tao Wang, Li-miao Li, and Zhi-gang Chen
Security Protection and Reliability

Defending Malicious Collision Attacks in Wireless Sensor Networks ............................................................771
   Phillip Reindl, Kendall Nygard, and Xiaojiang Du

Automated Software Protection through Program Externalization on Memory-Limited Secure Devices ...............................................................................................................................777
   Serge Chaumette, Olivier Ly, and Renaud Tabary

Guess and Determine Attack on Trivium Family ...............................................................................................785
   Neda Rohani, Zainab Noferesti, Javad Mohajeri, and Mohmmad Reza Aref

Isolating System Faults on Vehicular Network Gateways Using Virtualization .............................................791
   Sung-Moon Chung and Hyun-Wook Jin

A Fault-tolerant Architecture with Error Correcting Code for the Instruction-level Temporal Redundancy ...................................................................................................................................797
   Chao Yan, Hongjun Dai, Tianzhou Chen, and Meikang Qiu

Trust Model, Platform and Framework

A Cloud Architecture of Virtual Trusted Platform Modules ..............................................................................804
   Dongxi Liu, Jack Lee, Julian Jang, Surya Nepal, and John Zic

Trusted Computing Platform in Your Pocket .......................................................................................................812
   Surya Nepal, John Zic, Dongxi Liu, and Julian Jang

A Distributed Trust Model for Securing Mobile Ad Hoc Networks ..................................................................818
   Pushpita Chatterjee, Indranil Sengupta, and S.K. Ghosh

OST: A Transaction Based Online Social Trust Model for Social Network and File Sharing Security ...............826
   Ming Li, Bonti Alessio, and Wanlei Zhou

Analysis of Property Based Attestation in Trusted Platforms ..........................................................................833
   Aarthi Nagarajan, Vijay Varadharajan, and Michael Hitchens

PBTrust: A Priority-Based Trust Model for Service Selection in General Service-Oriented Environments ........841
   Xing Su, Minjie Zhang, Yi Mu, and Kwang Mong Sim

Author Index ..........................................................................................................................................................849
