## Table of Contents

**Preface - Volume 1** .................................................................................................................. xii
**Conference Committee - Volume 1** ....................................................................................... xiv
**Reviewers - Volume 1** ........................................................................................................... xv
**Keynote Addresses - Volume 1** ............................................................................................. xviii

---

### Volume 1

**Distributed/Parallel Software Systems**

The Pricing Scheme of the Grid Resource Based on Cournot Equilibrium ........................................ 5  
*Hao Li and Bo Wang*

The Research of Grid Resource Scheduling Mechanism Based on Pareto Optimality ............................. 9  
*Ran Chen and Hao Li*

**Embedded and Real-Time Software**

A Distributed Online Test System Based on Bluetooth Technology ................................................ 15  
*Jian-jun Dong and Heng-cheng Xu*

A Software Implementation for a Hybrid Firewall Using Linux Netfilter .......................................... 18  
*Yang Yang and Wang Yonggang*

Data Organization and Management of Image Navigation ................................................................ 22  
*Run-sheng Li, Shu-long Zhu, Wei-can Meng, and Wen Cao*
Design and Realization of NC Graphic Programming System .................................................................26
Pin Wang and Lan-zhi Su

Design of Power Grid Environment Monitoring System Based on WLAN .............................................30
Jie Cao, Guang Tu, Lei Liang, and Mei Jiang

Land Mine Detecting Robot Capable of Path Planning ...........................................................................34
Muhammad Zubair and Mohammad Ahmad Choudhry

Research on Embedded Diagnostic System of Transformer ....................................................................38
Yanhong Zang and Yulan Zhou

Research on Modeling for Real Time Range Prediction of Airborne Submarine Search Sensors ..................41
Zhi-zhong Jiang and Ri-jie Yang

Tool of Scheduling Simulation Based on AADL Models ........................................................................45
Li Yun and Guo Fulei

Human/Computer Interaction

Structured User Interface Design as a Lateral Thinking Tool for User Interface Design ..............................................51
Leonel Vinicio Morales Diaz and Jorge Arturo Rivera Perezgil

Intelligent Computer Aided Design for Railway Yard Line Diagram Based on Blocks with Feeler Vector ..........................................................55
Tao Yang, Bin Wang, and Hehua Li

Virtual Intervventional Treatment Planning on Liver Tumor Using VTK and ITK .........................................................59
Xie Xiaohui, Zhang Lei, Yang Guang, Yu Xiaofang, and Du Ruxu

Internet and Information Systems Development

A Knowledge Sharing Convergence Platform Based on OWL-S and Semantic Relations ..............................................................65
Ze Li, Ye-Lu Zheng, Si-Nuo Li, and Wei-Wen Liang

A Malware Sample Capturing and Tracking System ..............................................................................69
Xiao Jiang, Zhiyu Hao, and Yanming Wang

Application and Development of the Ecological Environment Carrying Capacity Evaluation Information System on Coal Mining ..................................................................................73
Ying-chun Wei, Dai-yong Cao, Jian Wu, and Chao Yu

Application and Implementation of SMS Platform in Project Management Information System Approval Workflow ..................................................................................77
Yunna Wu, Jian Chen, and Xi Ba
Data Sharing and Resource Evaluation of Cobalt-Rich Crust Based on Web Service .................................................................................................................................................................................................81
Hongbo Mei and Huiqin Zeng

Design of Executive Power Management System Based on ORT .................................................................85
Cai-feng Cao and Zhi-xing Qiu

Evaluation ERP II Application Performance from Institutional Theory View ..................................................89
Wang Huifen and Dalen Chiang

Numerical Study on the Chemical Hazard Aiming at the Security during 2008 Beijing Olympic Games .................................................................94
Shunxiang Huang, Feng Liu, Huimin Li, and Yuan Zuo

Research on Capability-Based Self-Learning Evaluation Strategy ..................................................................98
Bingcheng Qiu, Dingzhu Lu, Zhongxin Li, and Fangfang Deng

Study on Irrigation Information Management System Based on the Combination of C/S and B/S Model ........101
Yang Guofan, Chen Shuang, and Pang Yi

The Design and Realization of EMU Vehicle Information Transmission and Application System ...............105
Zhangang Wang, Chun Zhang, Ning Zhang, Feng Liu, and Ting Zhang

The Exploitation of the Network Services Platform for Injection Mould Business ........................................109
Liu Ying, Meng Qingguo, Guo Xiaojun, Zhang Xin, and Liu Jie

The Study on the Recognition of DTMF Signal in HMP Application .............................................................113
Liao Xue-hua and Zhu Zhou-sen

Knowledge-Based Software Engineering

Fuzzy Evaluation on Car Comprehensive Performance ....................................................................................119
Zhang Xin and Yang Zhijun

Natural Language Ontology Based on Basic Semantic Character Meaning ......................................................122
Liu Zhong

Other Topics in Software Engineering

A Study on Management of Software Engineering Capability in Japan: Panel Analysis on Independent Vendors .................................................................129
Yasuo Kadono, Hiroe Tsubaki, and Seishiro Tsuruho

An Abstraction-Driven Approach for Complex Model-Based Software Development .......................................133
K.O. Chow
Application of GPS in the Power Inspection Instrument Software Design ..................................................137
    Na Li, Zailin Piao, and Nan Hao

Method Study of Software Project Configuration Management ..................................................................140
    Jun-guang Zhang

Method to Study the Causes of Child Occupant Injuries in Traffic Accident ............................................144
    Hongyan Wang and Qingqing Cao

Mine Fire Simulation and Virtual Reality Technology Study .........................................................................148
    Hongqing Zhu, Bingwen Zhao, Yongchao Wang, and Minbo Zhang

Modular Structural Health Monitoring System for Large Span Spacial Structures ......................................152
    Qilin Zhang and Dalin Li

Research on In-Process Quality Control of Image Digitization ......................................................................156
    Weichao Li

Technology Changes and Institutional Changes in Software Development ..................................................159
    Jing Zhang, Yingkui Zhang, and Ying Duan

Transonic Aeroelastic Software and Its Engineering Application ....................................................................163
    Tonglai Han and Rong Li

Program Comprehension and Visualization

3-D Geological Visual Model and Numerical Model Based on the Secondary Development Technology of CAD ..........................................................175
    Huanling Wang and Weiya Xu

Common Boundary Detection between Grid Sets and the Implementation with Matlab ..................................179
    Guan Pei-xiang, Luo Xiao-hua, and Zhang Chuan-lin

Solid Rocket Grain Configuration Variational Design Method Based on Geometric Constraint Sketch ............181
    Qiang Cai, Futing Bao, Yang Liu, Haifeng Hu, and Han Wei

Reverse Engineering and Maintenance

Fast Delaunay Triangulation and Voronoi Diagram Generation on the Sphere ..............................................187
    Yingdong Ma and Qian Chen
Software Applications

Research on Tennis Technique and Tactics Decision Support Based on Theory of Association Data Mining ............................................................... 193
  Liang Chengjun, Yu Lijuan, and Wang Jihong

A Method for User-Centered Interface Customization and Development of a Prototype System ................................................................. 197
  Lianqi Wu, Peng Yu, Jianping Wei, Yongping Xie, and Hajime Kishida

Application of BP Neural Network in Oil Field Production Prediction ............................................................... 201
  Lei Sun, Yange Bi, and Guorong Lu

Application of Visual FoxPro on Green Construction Assessment ............................................................... 204
  Ruijun Jin, Yun Liu, Xin Liu, Shuigen Wu, and Weiyu Jiang

Automation of Hob Design .................................................................................................................. 210
  Tadeusz Nieszporek and Andrzej Piotrowski

Browser/Server Based Individual Well Profit Evaluation System ............................................................................ 214
  Lei Sun, Suling Li, and Guorong Lu

Chinese Keyword Search over Relational Databases .......................................................................................... 217
  Liang Zhu, Yong Zhu, and Qin Ma

Color Analysis of Soybean Leaves Based on Computer Vision .................................................................................. 221
  Junlong Fang, Lili Ma, and Yuehua Chen

Design and Implementation of Electronic Medical Record Template Based on XML Schema ............................................................... 225
  Haijun Yang

Design of the Variable-Pitch Cone Worm Technology .......................................................................................... 229
  Tadeusz Nieszporek and Piotr Boral

Development of Simulation and Analysis Software of Temperature Control for Massive Concrete Construction ............................................................................ 233
  Zhi-qiang Xie, Sheng Qiang, Xiao Sun, Wei Shuai, and Rui Zheng

Integrated CAD Software for Steel Frame Detailing .......................................................................................... 237
  Yang Huizhu, Chang Zhiguo, Hu Jiangming, and Zhang Qilin

Purposeful Visualization System .................................................................................................................. 241
  Xiaoyan Bai, David White, and David Sundaram

Realization of HHT Method to Solar Irradiance Data in MATLAB ............................................................................ 245
  Yong Wang, Yuanyuan Ding, Yongjian He, and Qilong Miao

Research and Application of Risk Assessment in Urban Lifeline Systems Based on GIS and REST ............................................................................ 248
  Renfeng Tang, Yongqiang Bai, and Tong Wang
Research and Application on the Information System of Supply Chain Synergy Management in Construction Enterprises ................................................................. 252

Sumian Peng and Junfeng Guo

Research and Development of Operation Simulation System for Cryogenic Air Separation Unit ...................................................................................................................... 256

Lige Tong, Li Wang, Shufeng Sun, and Yanping Zhang

Research on 3D Geological Modeling by Using GOCAD Software ................................................................................................................................. 259

Li Yongcheng, Shen Naiqi, Li Biao, Yan Yan, and Dong Mei

Research on the Evaluation for the Enterprise Core Competence in Informationization .............................................................................................................. 264

Sumian Peng and Junfeng Guo

Study on Best Wavelet Packet Based Independent Threshold De-noising for MUAP ......................................................................................................................... 269

Tingting Yuan, Quan Liu, and Qingsong Ai

The Computer-Aided Design Software for Smart Home Device Based on Cloud Computing Service ................................................................................................. 273

Shang-Yuan Chen and Yi-Feng Chang

Utilization of DLT Theory in 2D Image Analysis System ..................................................................................................................................................... 279

Kaixiang Bai, Chengyin Liu, and Gaoming

Some Aspects of an Application Evaluation Based on Experience with Tool “Picture” .................................................................................................................... 283

Marian Niedzwiedzinski and Małgorzata Ziemecka

Software Architecture and Design I

The Architecture and Implementation of Biodiversity Digital Library in China ......................................................................................................................... 291

Zheping Xu, Jinzhong Cui, Zhaogai Wang, Fenghong Liu, and Guojun Liu

3S-Based Farmland Information Support System at County Level ................................................................................................................................. 295

Wu Xuequn, Zuo Xiaqing, and Fang Yuanmin

A Simple 3-D Surface Reconstruction Method ......................................................................................................................................................... 299

Wang Ning, Zhang Wenzheng, Zhang Chuanlin, and Li Huaipeng

A Systematic Literature Review to Identify the Issues in Bidirectional Model Transformation ........................................................................................................ 303

Lusiana Efrizoni, Wan M.N. Wan-Kadir, and Radziah Mohamad

An Aspect-Oriented Modeling Approach ......................................................................................................................................................... 307

Xinxiu Wen and Huiqun Yu

An Integrated Software for the Performance Study of PET Detector with Neural Network Position Estimators ......................................................................................... 311

Zhang Lijun, Wang Yonggang, Du Junwei, Chen Jun, and Yang Yang
Application of LBS in Mobile Industrial and Commercial Administration
Geographic Information System .................................................................................................................. 314
   Shuqiang Lu

Cow Breeding System Research Based on SOA and Web Services ................................................. 317
   Shi Liang, Bao Wenxing, Lei Bingbing, Liu Guangming, and Pu Hui

Author Index - Volume 1 .......................................................................................................................... 321
2010 Second WRI World Congress on Software Engineering

WCSE 2010

Table of Contents
Volume - 2

Preface - Volume 2 ............................................................................................................................................xii
Conference Committee - Volume 2 ........................................................................................................xiv
Reviewers - Volume 2 ......................................................................................................................................xv
Keynoter Speakers - Volume 2 ..................................................................................................................xviii

Volume 2

Software Architecture and Design II
Development of Risk Assessment System for Coal-Bed Methane Underbalanced Drilling ............................................................5
Xiujuan Yang, Qingyang Wen, Xiangzhen Yan, and Yan Xia

Development Platform for Vehicle’s Brake System Based on VC++ .................................................................9
Bin Wang and Xuexun Guo

Digital STB Game Portability Based on MVC Pattern ..................................................................................13
Jun Huang and Guangping Chen

Google Cloud Computing Platform Technology Architecture and the Impact of Its Cost .........................................................17
Xiaojing Jia

Map Matching Algorithm According to Pseudo-Zernike Moments ........................................................................21
Wen Cao, Jing Zhao, Wei-can Meng, and Run-sheng Li
Mining Important Topological Properties in Large-Scale Computer Software Systems Based on Complex Networks ................................................................. 25

Shiwen Sun, Chengyi Xia, Li Wang, and Lanying Wang

Program Design of Concrete Thermal Parameters Back Analysis Based on Improved Accelerating Genetic Algorithm .......................................................... 29

Li Han Wu, Ji Shunwen, Liu Qiuchang, and Ning Huaiming

Relationship on Path Coverage Criteria for Software Architecture Testing ................................................................. 33

Lijun Lun and Xin Chi

Research and Design of Distributed Sluice Group Joint Dispatch System Based on WCF and OPC Technology ................................................................. 37

Zhao Chengping, Ning Qian, and Liang Chuan

Research on Modeling and Model Converting Approaches Based on MDA ................................................................. 41

Wang Haitao and Chen Wei

Shared Interface Gateway Softway Model in Communication Management ................................................................. 45

Xin Xu, Jie Xu, Tongxin Xie, and Xi Shao

Space Flight Training Simulation Project Technology Research ................................................................. 53

Jian-gang Chao, Jun-yi Shen, and Ning He

Study on Urban Public Transportation Emergency Command System Platform ................................................................. 62

Li Jian, Xiao-kun Wang, Chen Wei-qiang, and Zhu Zhong

Software Components and Reuse

A Complex Meta-model for Extra-Functional Properties Concerning Common Data Types: Their Comparing and Binding ................................................................. 71

Kamil Ježek

Bichon: A New Component-Oriented Programming Language ................................................................. 75

Liping Xu and Yufei Ren

Software Rejuvenation Strategy Based on Components ................................................................. 80

Jun Guo, Weiyue Li, Xinya Song, Bin Zhang, and Yunsheng Wang

The Development and System Integration of Science and Technology Awards Based on WEB SERVICES ................................................................. 84

Daquan Deng and Yaozhou Liu

Software Dependability, Safety, Privacy, and Reliability

A Times-Based Model for Group-centric Secure Information Sharing ................................................................. 89

Peiwu Li

An Analyzer-Based Software Security Measurement Model for Enhancing Software System Security ................................................................. 93

Sen-Tarng Lai
An Application of Mobile Phone Encryption Based on Fibonacci Structure of Chaos .................................................................................................................................................................................. 97  
  Fenmei Wang, Jing Ding, Zongyou Dai, and Yihang Peng

Composite Agent Service Selection Algorithm for Non-functional Attributes Based on Simulated Annealing .................................................................................................................................................................................. 101  
  Zhang Kun, Zhang Hong, Jiang Liming, and Xu Jian

Computer System Safety Argument Schemes .................................................................................................................................................................................. 107  
  Tangming Yuan and Tianhua Xu

Insider Threat Identification System Model Based on Rough Set Dimensionality Reduction .................................................................................................................................................................................. 111  
  Tao Zhang and Peng Zhao

Measuring Reliability Growth of Open Source Software by Applying Stochastic Differential Equations .................................................................................................................................................................................. 115  
  V.B. Singh, P.K. Kapur, and Abhishek Tandon

Model Checking a Secure Hypervisor .................................................................................................................................................................................. 119  
  Sunlv Wang, Jian Liu, Qiuping Yi, and Xian Zhang

Network Virus Transmission Probability Model of Random .................................................................................................................................................................................. 123  
  Yang Yue Jiang

Ontology Driven Formal Description of Swift Trust and Its Computational Model .................................................................................................................................................................................. 126  
  Guangquan Xu, Xiaohong Li, Zhiyong Feng, and Yingyuan Xiao

Outlier Detection with Double-Sided Control Mechanism and Different Priority Weight Values for Network Security .................................................................................................................................................................................. 130  
  Yunus Doğan and Gökhan Dalkılıç

Reliability and Risk Assessment Software Development for Casing String in High-Pressure Gas Well .................................................................................................................................................................................. 134  
  Zhiquan Xu, Xiangchen Yan, and Gensheng Li

Research and Discussion on Software Safety and Reliability .................................................................................................................................................................................. 138  
  Jing Zhang, Xuejiao Gao, and Ying Duan

Research on XML Based Static Software Security Analysis .................................................................................................................................................................................. 141  
  Hongbo Zheng, Kuanjiu Zhou, Xiaochen Lai, Chunyan Liu, and Zongzheng Chi

Simulation Modeling of Network Intrusion Detection Based on Artificial Immune System .................................................................................................................................................................................. 145  
  Jing Yu and Feng Wang
Software Engineering for Mobile, Ubiquitous, and Pervasive Systems

An Efficient Group Key Agreement Scheme for MANETs Based on Merkle Identity Tree .................................................................151

Li-qing Chen and Rong-lin Hu

Software Metrics

Zhang Xinlan, Huang Zhifang, Wei Guangfu, and Zhang Xin

Simplifying Software Metric Models via Hierarchical LASSO with Incomplete Data Samples .................................................................161

Tianfa Xie, W. Eric Wong, and Wenxing Ding

Software Power: A New Approach to Software Complexity Metrics .................................................................165

Qingfeng Du and Fan Wang

Software Policy and Ethics

Justification of Free Software and its Enlightenment .................................................................171

Zhang Yingkui, Zhang Jing, and Wang Liye

Patent and Antitrust Problems on Wireless Networking .................................................................174

Huei-Chen Hsu and Wen-Liang Liu

Software Processes and Workflows

An Evolutionary Game of Partners in Peer Review .................................................................179

Li Meng, Zhou Xianzhong, and Zhu Yingying

Automatic Generation of Relay Logic for Interlocking System Based on Statecharts .................................................................183

Chen Xiangxian, Huang Hai, and He Yulin

Geographic Information Data Standard Applied in the Software Development Process .................................................................189

Huan Maosheng and Chi Tianhe

The Effective Combination of IPD and CMM: IPD-CMM Process .................................................................193

Yue Jia and Rui Han

The Information System Engineering Supervision Based on Software Engineering Theory .................................................................196

Xu Che and Xiaomin Zhu

Workflow Exception Handling Technology Based on Office Affairs .................................................................200

Jianmin Hou and Nangao Wang
## Software Requirements

Application of Agile Requirement Engineering in Modest-Sized Information Systems Development ............................................................... 207

*Liu Jun, Wang Qiuzhen, and Gao Lin*

Comparison of Requirement Items Based on the Requirements Change Management System of QONE ............................................................. 211

*Gang Lu and Feng Yuan*

Modeling Automotive Software Requirements with Aspectual Models ........................................................................................................ 216

*Xiaojian Liu, Xuqin Yan, Yang Li, Xiaobo Che, and ChengYong Mao*

## Software Testing and Analysis

A Code-Based Input Partitioning Method for Equivalence Class Testing ....................................................................................................... 223

*Lwin Khin Shar, Hee Beng Kuan Tan, and Hui Lui*

A Software Size Estimation Method Based on Improved FPA ....................................................................................................................... 228

*Ya-fang Fu, Xiao-dong Liu, Ren-nong Yang, Yi-lin Du, and Yan-jie Li*

Classification of Software Defect Detected by Black-Box Testing: An Empirical Study .................................................................................. 234

*Ning Li, Zhanhuai Li, and Xiling Sun*

Genetic Algorithm Based Path Testing: Challenges and Key Parameters .................................................................................................. 241

*Irman Hermadi, Chris Lokan, and Ruhul Sarker*

Regression Analysis Method for Software Reliability Growth Test Data ................................................................................................... 245

*Ao Liang and Wang Qihua*

Research and Practice of the IVF Software Testability Model .................................................................................................................... 249

*Ding Zhen-Guo*

Research of Software Reliability Combination Model Based on Neural Net ............................................................................................... 253

*Gaozu Wang and Weihuai Li*

Study on International Software Localization Testing .............................................................................................................................. 257

*Chunsheng Zhao, Zhiyong He, and Wei Zeng*

SXMTol—A Tool for Stream X-Machine Testing ............................................................................................................................. 261

*Chunyan Ma, JunSheng Wu, and Tao Zhang*

The Design of TMS320 DSP Simulation and Testing System .................................................................................................................... 266

*Wang Chongwen and Zhao Deshen*

The Lesson Learned of a System’s Performance Test  ............................................................................................................................. 270

*Chu Huey-Der and Jack Fei Yang*

The Research of Test-Driven Business Process Outsourcing ................................................................................................................ 277

*Yunsheng Wang, Bo Wang, Jun Guo, Bin Zhang, and Jina Wang*
Software Tools and Development Environments

A Data Backup Method Based on File System Filter Driver .........................................................283
Zhao Zhongmeng and Yao Hangtian

A New Eclipse-Based JML Compiler Built Using AST Merging .......................................................287
Amritam Sarcar and Yoonsik Cheon

API Evolution with RefactoringNG ..............................................................................................293
Zdeněk Troníček

Computerized Simulation Development for Blood Circulation and Bodily Movement during Obligatory Prayers (SolatSim) .................................................................298
Nor Azah Abdul Aziz and Syakirah Samsudin

Study about Salt Information of Salt Lake by Remote Sensing Technology .................................306
Li Li

The Depth Research for Salt Lake by Remote Sensing Technology ...........................................311
Li Li, Tong Liqiang, and Li Xiaohui

Theoretical Research on Adjacent Multi-station Point Cloud Data Precision Combination in 3D Laser Scanning .......................................................................................315
Tianzi Li and Youfeng Zou

Preschool Multimedia Interactive Courseware: Classifying Object (Mengelaskan Objek) PMICMO .........................................................................................................................318
Nor Azah Abdul Aziz, Roznim Mohamad Rasli, and Khairunnisa Ramli

Theory and Formal Methods

A Combined Finite-Element and Finite-Volume Method in Reservoir Simulation .................................................................325
Junzheng Yang, Xugang Wang, Honglan Zou, and Guoping Liang

Application of Fuzzy FMECA in Gas Network Safety Assessment ..................................................329
Qiuju You, Wei Zhu, Tao Xing, and Zhifen Chen

On the Trees Whose Merrifield-Simmons Indices Belong a Closed Interval ..................................334
Xiyun Sun, Qiongji, and Chengfu Ye

Research on Software Cost Evaluation Model Based on Case-based Reasoning ..........................338
Guoping Jiang, Yazhen Wang, and Haitao Liu

Study on Formal Methods Application in Airborne Electronic Hardware Design ...............................342
Peng Wang and Yi Tian

The Predicate Formulae for Object-Oriented Database Schema Evolution ....................................346
Jie Lin, Jiankun Yu, and Zhiyong Zeng
