CONTENTS

Plenary speakers .................................................................................................................................................. 1

Intelligent monitoring and control for critical infrastructure systems and application to integrated wastewater treatment systems .................................................................................................................. 2

*Brdys M. A.*

From Large-Scale Systems to SYSTEM OF SYSTEMS – Control Challenges for the 21st Century…………… 13

*Jamshidi M.*

Micro-Nano Robotics and Automation System .......................................................................................... 20

*Fukuda T., Nakajima M., Kojima M.*

Stability Study of Two Level Hierarchical Nonlinear Systems .................................................................. 30

*Benrejeb M.*

**Advanced DSS in complex industrial and management systems** ......................................................... 42

An Experimental Web-Based Decision Support System ............................................................................. 43

*Bobosatu F., Dutu L., Filip F.G.*

Web-Based Knowledge-Driven Decision Support Systems .................................................................... 47

*Stănescu I.A., Ștefan A.*

Workflow-Based Decision Support for Failure Mode and Effects Analysis ............................................. 53

*Cândea C., Georgescu, A., Kifor C.V., Cândea G.*

Decision Support Systems for Partnership Activities Facilitation ........................................................ 59

*Suduc A-M., Bizoi M., FilipF.G.*

Integrating DSS in Public Transportation Monitoring Systems .............................................................. 63

*Duta L., Zamfirescu C-B., Cioca M., Addouche S.*

**Combinatorial optimization for the large scale complex systems** ....................................................... 68

Fully Polynomial Time Approximation Scheme for the Two-Parallel Capacitated Machines Scheduling Problem Under Unavailability Constraint ................................................................. 69

*Kacem I.*

Heuristics Algorithms Based on a Linear Programming for the Three-Dimensional Bin-Packing Problem ........................................................................................................................................... 72

*Hifi M., Kacem I., Negre S., Wu L.*

Heuristic for finding reliable and robust paths in dynamic networks ...................................................... 77

*Goessen C., Habbas Z., Khadraoui D.*

A Model-Driven Architecture for Implementing Business Reasoning Maintenance Systems ............. 82

*Tamisier T., Didry Y., Parisot O., Wax J., Feltz F.*

Lot Sizing Problem with Consideration of Delivery and Earliness Penalties in Mono-product Supply Chain Environment .............................................................................................................. 87

*Grunder O., Wang D., ElMoudni A.*
Decentralized control ................................................................. 93

Regulation of Decentralized Active System Development and Intelligent Control Mechanisms …… 94
Tsyganov V.

Decentralized control synthesis using orthogonal functions .................................................... 99
Attia M.S., Ayadi B., Benhadj Braiek N.

A contribution to the contractibility problem for overlapping controllers ............................ 104
Rossell J.M., Palacios-Quinonero F., Luo N.

Decentralized control and estimation I .................................................................................. 110

Decentralized Stabilization of Discrete-Time Networked Strongly Coupled Complex Systems …… 111
Bakule L., Bakulova D., Papik M.

Decentralized Digital PID Controller Design for Performance ............................................. 117
Kozáková A., Veselý V., Osuský J.

Decentralized Robust Control of Linear Uncertain Systems with Reduced Conservatism .......... 123
Rosinová D., Veselý V.

Decentralized control and estimation II ................................................................................ 129

Stabilization of Networked Systems under Information Structure Constraints ........................ 130
Bakule L., de la Sen M.

Reliable Decentralized Control of Interconnected Discrete Delay Systems ............................ 136
Mahmoud M.S.

Robust tracking and disturbance rejection for decentralized time-delay systems .................. 142
Iftar A.

An improved distributed version of Han’s method for distributed MPC of canal systems .......... 148
Doan M.D., Keviczky T., De Schutter B.

On Adaptation of Loss Functions in Decentralized Adaptive Control .................................... 154
Smidl V.

Discrete events systems and Petri nets .................................................................................... 160

Rejection of Temporal Disturbances in Milk Manufacturing Unit with Time Constraints .......... 161
Mhalla A., Collart Dutilleul S., Jerbi N., Craye E.

Control Synthesis for Partially Controlled Marked Graph Subject to Marking
Exclusion Constraints .............................................................................................................. 167
Atli M., Sava A., Achour Z., Rezg N.

Deadlock free Control Synthesis for Partially Controllable Marked Graphs ............................ 173
Sioud H., Sava A., Achour Z., Rezg N.

Modular fault diagnosis using temporized analysis for a class of discrete event systems .......... 180
Cerrada M., Ferrarini L., Dedè A.

Functioning mode Management and formal assessment of safety .......................................... 186
Bon P., Collart Dutilleul S., Defossez F.

Using Interval Constrained Petri Nets for Regulation of Quality ........................................... 192
Dhouibi H., Collart Dutilleul S., Nabli L., Craye E.
Industrial applications of advanced control ................................. 199

Reliability review of the LHC Collimators Low Level Control System ........................................... 200
Masi A., Donze M., Losito R.

Low emission, self-tunable DSP based Stepping Motor Drive for use with arbitrarily long cables ..... 206
Martino M., Masi A., Losito R., Picatoste Ruilope R.

Large scale and complex problems ................................................. 212

Design Principles of Web-based Services in Large-Scale e-Logistics Processes .................. 213
Idoughi D., Kolski C., Seffah A.

Ensuring Performances of Large Scale Wireless Sensor Networks with Multiple Sinks and Multiple Channels ................................................................. 219
Kone C.T., Lepage F., David M.

Distributed embedded health assessment of networked instruments ............................... 225
Dievart M., Charbonnaud P., Desforges X.

Large scale logistics in manufacturing and services ........................................ 231

Control of a two-stage production/inventory system with products returns ....................... 232
Vercraene S., Gayon J.-P., Jemai Z.

Trackview – Fleet Tracking Solution Using Global Positioning System ............................... 238
Jalba L., Chiciudean A., Drumea A., Vuici M.

Solution Methods for a Multi-Product Lot-Sizing and Sequencing Problem in a Flow-shop .... 244
Shchamialiova K., Dolgui A., Grimaud F.

Modelling, control and optimization in large scale systems applications .................. 250

Modelling and control of wind turbines ............................................................................... 251
Pintea A., Popescu D., Borne P.

Hierarchical Control Structure for Thermoenergetical Processes ...................................... 257
Dimon C., Airimitoaie T.B., FilipF.G.

Multiple Model Control for Processes with Large Load Variation ......................................... 263
Lupu C., Ticlea A., Petrescu C., Cirstoiu S.

Real time traffic monitoring based on travel time minimization ............................................. 267
Petrescu S., Bucur L.

Monitoring and Control of Critical Infrastructure Systems ........................................... 273

Model Predictive Controller for Networked Control Systems ........................................... 274
Ewald G., Brdys M.A.

Optimized management and control of household energy demand supplied from solar and traditional electrical and gas energy sources ........................................ 280
Pawlowski M., Brdys M.A.

Optimised allocation of hard quality sensors for robust monitoring of quality in drinking water distribution systems ...................................................... 286
Łangowski R., Brdys M.A.
Centralized dissolved oxygen tracking at wastewater treatment plant: nowy dwor gdanski case study ................................................................. 292
Piotrowski R., Brdys M.A., Miotke D.

Decentralized oxygen control in multi-zone aerobic bioreactor at wastewater treatment plant .......... 298
Zubowicz T., Brdys M.A.

Robustly Feasible Optimizing Control of Network Systems under Uncertainty and Application to Drinking Water Distribution Systems ................................................................. 304
Nam Tran V., Brdys M.A.

Adaptive multiobjective model predictive control with application to DWDS ......................... 310
Kurek W., Brdys M.A.

Multiresolution, signal analysis, speech, biomedical signal and control ................................. 316

A multiresolution time-frequency based algorithms for ECG signals compression ..................... 317
Ktata S., Ouni K., Ellouze N.

EGG Signal Multi-scale Product for Characterizing Voice Quality ........................................... 324
Belhaj A., Bouzid A., Nait-Ali A.

Improved Multiscale Product Method for Glottal Opening Instant Detection from Speech Signal ..... 328
Saidi W., Bouzid A.

Voicing Classification Based on Speech Spectrum Multi-Scale Product ................................. 332
Ben Messaoud M.A., Bouzid A., Ellouze N.

Landmines Ground-Penetrating Radar Signal Enhancement By Stationary Wavelet Transform ...... 337
Ben Saïd S., Bouyahia Marzouk S., Duflos E., Vanheeghe P., Ellouze N.

A Sensor Network Configuration Considering Priori Estimation Error and Communication Energy ... 341
Takeda T., Namerikawa T.

Automatic Formant Tracking Method by Fourier and Multiresolution Analysis ......................... 347
Jemaa I., Ouni K., Laprie Y.

Planning optimization and decision making ............................................................ 353

The Large Scale System of Multiple Criteria Decision Making; Pre-processing .................. 354
Mosavi A.

Non-Conventional Optimization Methods Hybridation For Solving Flow-Shop Multiobjective Pharmaceutical Industries Problem ......................................................... 360
Boukef H., Lefranc G., Borne P.

ORTiC: A novel Approach towards Optimized Real Time CarPooling with an advanced Network Representation Model on siblings ......................................................... 367
Sghaier M., Zgaya H., Hammadi S., Tahon C.

Predictive control ................................................................. 376

Hybrid Optimal Control of Large-Scale Systems .......................................................... 377
Kozák Š.

Model Predictive Control Design for a Nonlinear Four-Tank System .................................. 382
Ansar panahi S., Noor S.B.M.

Distributed predictive control for complex hybrid system. The Refrigeration System example .... 388
Bourdais R., Gueguen H.
Optimized robust model predictive control - application to drinking water distribution systems hydraulics ................................................................. 395
Ciminski, A., Duzinkiewicz, K.

Process control and applications I ................................................................. 401

Robust adaptive fuzzy control and strategy of avoidance of obstacles for a manipulator arm to serve the people Disabilities ................................................................. 402
Chatti N., Chatti A.

Neuronal Control of a manipulator arm serving people with disabilities: controlled inverse model…… 410
Nhouchi M., Chatti A.

Multilevel Adaptive Control of Interconnected Nonlinear Systems: Application to Double Coupled Inverted Pendulums ................................................................. 418
Motallebzadeh F., Ozgoli S., Momeni H.R.

Control of Transient Coupled Radiative-conductive Heat Transfer Equation ........................................... 424
Ali S.F., Delattre C., Rafaralahy H., Didier G., Jeandel G., Boutayeb M.

Process Control Simulator for Components of a Complex Power System .................................................. 430
Dumitru I., Fagarasan I., Iliescu S.St.

Process control and applications II ................................................................. 435

Generation Units Models for Load Dispatch Simulator ................................................................. 436
Arghira N., Fagarasan I., Soare C., Iliescu S.St.

Flatness-based Switching Control ................................................................. 442
Gharsallaoui H., Ayadi M., Benrejeb M., Borne P.

ACO-Based Optimization of Switching Instants for Autonomous Switched Systems With State Jumps ................................................................. 449
Majdoub N., Sakly A., Sakly M.

Robust filtering for descriptor large scale systems via LMI ................................................................. 455
Mansouri M., Boutat-Baddas L., Darouach M., Messaoud H.

Real time indoor intelligent navigation system inside hypermarkets ................................................................. 461
Hadj Khalifa I., El Kamel A., Barfety B.

Process modelling and applications ................................................................. 467

Model Reduction for Natural Gas Pipeline Systems ................................................................. 468
Aalto H.

Multimodeling vs PieceWise Affine modeling for the identification of open channel systems ....... 474
Boukharaoua K., Duviella E., Bako L., Lecoeuche S.

A New Multimodel Approach for Complex Processes Modeling Based on Classification Algorithms: Experimental Validation ................................................................. 480
Elfelly N., Dieulot J.Y., Benrejeb M., Borne P.

Model-based Reinforcement Learning in Multiagent Systems in Extensive Forms with Perfect Information ................................................................. 487
Akramizadeh A., Afshar A., Menhaj M.B., Jafari S.

Forecasting of Renewable Energy Balance on Medium Term ................................................................. 495
Dragomir O.E., Dragomir F., Gouriveau R., Minca E.
Use of Probabilistic Relational Model (PRM) for Dependability Analysis of Complex Systems ................................................................. 501
Medina Oliva G., Weber P., Levrat E., Iung B.

BOCR Framework for Decision Analysis ................................................................. 507
Tchangani A.P., Pérès F.

Lateral Control of Autonomous Vehicles Using Multi-Model and Fuzzy Approaches ................. 514
Zhao J., Lefranc G., El Kamel A.

**Stability study of complex systems I** ................................................................. 521

Robust Exponential Stability of Uncertain Perturbed Systems with Time Varying Delays ........ 522
Amri I., Soudani D.

Stability Analysis of Large-Scale Systems based on Energy Absorption Capacity ................. 528
Jamshidifar A.A., Afshar A.

Static Output Feedback Stabilization of Multiple Models Subject to Actuators Saturation ........ 534
Saïfia D., Chadli M., Labiod S.

The stability analysis of distributed model predictive control with limited communication ........ 540
Li D., Xi Y.

**Stability study of complex systems II** ................................................................. 546

New Stabilizing Controller Nonlinear System Design Using the Generalized Thin Arrow Form Matrix. Application to the Chaos Synchronization ......................... 547
Hammami S., Benrejeb M.

Robust stabilization of a class of uncertain systems with time delay ..................................... 553
Testouri S., Saadaoui K., Benrejeb M.

An approach to the stability study of non-linear systems in the neighbourhood of a given operating point ................................................................. 558
Chamekh Y., Ksouri M.

Stability Study of an Observer-Based Controlled Wind Turbine ........................................ 564
Khezami N., Benhadj Braiek N., Guillaud X.

**Supervision and control of large scale complex systems** ........................................ 571

Decentralized Model Predictive Control of Drinking Water Networks using an Automatic Subsystem Decomposition Approach ............................................. 572
Barcelli D., Ocampo-Martinez C., Puig V., Bemporad A.

Leakage Isolation using Pressure Sensitivity Analysis in Water Distribution Networks: Application to the Barcelona case study ............................................. 578
Pérez R., Puig V., Pascual J., Quevedo J., Landeroso E., Peralta A.

Multi-Objective Management of Multi-resource Hydrographical Systems ......................... 585
Ladeveze D., Charbonnaud P., Archimede B.

A Pattern Search Method for Improving the Operation of Sewer Systems ......................... 591
Leirens S., Giraldo J.M., Negenborn R.R., De Schutter B.

Distributed MPC for Large Scale Systems using Agent-based Reinforcement Learning .......... 597
Javalera V., Morcego B., Puig V.
Towards an Ontology-based Transportation System for User Travel Planning .......................... 604
Mnasser H., Oliveira K., Khemaja M., Abed M.

Energi-Based Control for an Over-Saturated Three-phase Intersection ................................. 612
Motawej F., Bouyekhf R., El Moudni A.

Modeling of interface dialog between train and balise localization by signaling system ERTMS in dysfunction cases ................................................................. 618
Hayat S., Dhahbi S., Abbas Turki A., El Moudni A.

Tool support for conceptual models of the PERCOMOM platform applied to transportation domain ................................................................. 627
Bacha F., Abed M.

The concept of the smart wagon for improving the safety of a railroad transportation system ...... 638
Clarhaut J., Hayat S., Conrard B., Coquempot V.

Disturbances modelling for improving the traffic operation for the public transport networks ...... 644
Hayat S.
