2011 12th Canadian Workshop on Information Theory

(CWIT 2011)

Kelowna, BC, Canada
17-20 May 2011
### Table of Contents

#### Coding and Information Theory I

**Information Rates of Cyclostationary Faster-than-Nyquist Signaling** ......................................................... 1  
Yong Jin Daniel Kim, *McGill University*  
Jan Bajcsy, *McGill University*

**Design of Multi-Edge-Type LDPC Codes for High-Order Coded Modulation** ........................................... 5  
Lei Zhang, *University of Toronto*  
Frank R. Kschischang, *University of Toronto*

**A New Approach for FEC Decoding based on the BP Algorithm in LTE and WiMAX Systems** .......... 9  
Ahmed Refaey Hussein, *Laval University*  
Sebastien Roy, *Laval University*  
Paul Fortier, *Laval University*

**The Delay Selector Channel: Definition and Capacity Bounds** ................................................................. 15  
Lu Cui, *York University*  
Andrew Eckford, *York University*

**On the Transmission of a Gaussian Source over an AWGN Channel with Correlated Interference** ....... 19  
Morteza Varasteh, *Sharif University of Technology*  
Hamid Behroozi, *Sharif University of Technology*

#### Interference and Cognitive Radio

**Optimum Cognitive Radio Transmission Scheme for Reducing Average Interference Power** ............... 24  
Sang Joon Kim, *Samsung*  
Saeed S. Ghassemzadeh, *AT&T Labs - Research*  
Robert Miller, *AT&T Labs - Research*  
Vahid Tarokh, *Harvard University*

**Interference Alignment and Neutralization in a Cognitive 3-User MAC-Interference Channel: Degrees of Freedom** ................................................................. 26  
Anas Chaaban, *Ulm University*  
Aydin Sezgin, *Ulm University*

**On the Capacity of the Cognitive Z-Interference Channel** ................................................................. 30  
Mojtaba Vaezi, *McGill University*  
Mai Vu, *McGill University*

**Capacity Bounds for the Three-User Cognitive Z-Interference Channel** ............................................ 34  
Mahtab Mirmohseni, *Sharif University of Technology*  
Bahareh Akhbari, *Sharif University of Technology*  
Mohammad Reza Aref, *Sharif University of Technology*
Sequences and Reed-Solomon Codes

Peak Power Analysis of MC-CDMA Employing Golay Complementary Sequences .................................................. 38
   Lin Dong, Lakehead University
   Nam Yul Yu, Lakehead University

Group Randomness Properties of Pseudo-Noise and Gold Sequences ................................................................. 42
   Behtash Babadi, Harvard University
   Saeed S. Ghassemzadeh, AT&T Labs - Research
   Vahid Tarokh, Harvard University

Adaptive Single-Trial Error/Erasure Decoding of Reed-Solomon Codes ................................................................. 47
   Christian Senger, Ulm University
   Vladimir Sidorenko, Ulm University
   Steffen Schober, Ulm University
   Martin Bossert, Ulm University
   Victor V. Zyablov, Russian Academy of Sciences

Multivariate Interpolation Decoding of Heterogeneous Interleaved Reed-Solomon Codes ..................................... 52
   Farnaz Shayegh, Concordia University
   M. Reza Soleymani, Concordia University

Source Coding

On Optimum Fixed-Rate Causal Scalar Quantization Design for Causal Video Coding ......................................... 58
   Lin Zheng, University of Waterloo
   En-hui Yang, University of Waterloo

Hard-Decision Quantization with Adaptive Reconstruction Levels for High Efficiency Video Coding .......... 62
   Jing Wang, Research In Motion
   Xiang Yu, Research In Motion
   Da-ke He, Research In Motion

Exploiting Memory and Soft-Decision Information in Channel Optimized Quantization for Correlated Fading Channels .......................................................................................................................... 66
   Shervin Shahidi, Queen's University
   Fady Alajaji, Queen's University
   Tamas Linder, Queen's University

Hybrid Digital-Analog Source-Channel Coding with One-to-Three Bandwidth Expansion ......................... 70
   Ahmad Abou Saleh, Queen's University
   Fady Alajaji, Queen's University
   Wai-Yip Geoffrey Chan, Queen's University

Credit-Based Variable-to-Variable Length Coding: Key Concepts and Preliminary Redundancy Analysis ......................................................... 74
   Jin Meng, University of Waterloo
   En-hui Yang, University of Waterloo
# Network Coding and Cooperative Diversity

<table>
<thead>
<tr>
<th>Title</th>

</tbody>
</table>
Distributed Optimization of the Bhattacharyya Parameter in Wireless Relay Networks ................................. 120
Josephine Chu, MaxLinear Inc.
Andrew Eckford, York University
Raviraj Adve, University of Toronto

Complexity-Efficient Detection for MIMO Relay Networks .................................................................................. 126
Shuangshuang Han, University of Alberta
Chintha Tellambura, University of Alberta

Packet Level Analysis for AMC in a Wireless Cooperative Communication System over Nakagami-m Fading Channels .......................................................................................................................... 130
Ning Wang, University of Victoria
T. Aaron Gulliver, University of Victoria

Coding Theory and Information Theory II

Combinatorial Properties as Predictors for the Performance of the Sum-Product Algorithm .................. 134
Sotiria Lampoudi, University of California, Santa Barbara
John Brevik, California State, Long Beach
Michael O'Sullivan, San Diego State University

On the Equivalence of the Berlekamp-Massey and the Euclidean Algorithms for Algebraic Decoding .......................................................................................................................... 139
Todd Mateer, Howard Community College

Using Variable-Length Codes to Correct Insertion, Deletion and Substitution Errors ......................... 143
Victor Buttigieg, University of Malta

Streaming Codes for a Double-Link Burst Erasure Channel .............................................................................. 147
Devin Lui, University of Toronto
Ahmed Badr, University of Toronto
Ashish Khisti, University of Toronto

A New Secret Key Agreement Scheme in a Four-Terminal Network ................................................................. 151
Parisa Babaheidarian, Sharif University of Technology
Somayeh Salimi, Sharif University of Technology
Mohammad Reza Aref, Sharif University of Technology

MIMO and Multi-Antenna Systems

Contribution of Multiplexing and Diversity to Ergodic Capacity of Spatial Multiplexing MIMO Channels at Finite SNR .................................................................................................................. 155
Maher Arar, University of Ottawa
Abbas Yongacoglu, University of Ottawa

Sparse Space Codes for Multi-Antenna Systems ................................................................................................. 159
Sagar Dhakal, Research In Motion
Alireza Bayesteh, Research In Motion

On Joint Detection and Channel Estimation over Rank-Deficient MIMO Links with Sphere Decoding ................................................................................................................................. 165
José Lagunas Morales, Laval University
Sébastien Roy, Laval University
Low Complexity Piecewise Linear LLR Calculation for MIMO-BICM Systems .............................................. 170
  Chao Zheng, *University of Alberta*
  Raman Yazdani, *University of Alberta*
  Masoud Ardakani, *University of Alberta*

RF Beamforming with Closely Spaced Antennas .................................................................................................. 174
  William Chou, *University of Toronto*
  Raviraj Adve, *University of Toronto*

Interference Channels and Communication Systems

Strong Interference Conditions for Multiple Access-Cognitive Interference Channel ........................................ 178
  Mahtab Mirmohseni, *Sharif University of Technology*
  Bahareh Akhbari, *Sharif University of Technology*
  Mohammad Reza Aref, *Sharif University of Technology*

Downlink Multi-User Interference Alignment in Two-Cell Scenario ................................................................. 182
  Alireza Bayesteh, *Research In Motion*
  Amin Mobasher, *Research In Motion*
  Yongkang Jia, *Research in Motion*

Downlink Multi-User Interference Alignment in Compound MIMO-X Channels .............................................. 186
  Amin Mobasher, *Research In Motion*
  Alireza Bayesteh, *Research In Motion*
  Yongkang Jia, *Research in Motion*

Channel Estimation with Amplitude Constraint: Superimposed Training or Conventional Training? ......... 190
  Gongpu Wang, *University of Alberta*
  Feifei Gao, *Jacobs University, Bremen*
  Chintha Tellambura, *University of Alberta*

Spectrum Trading for Risky Environments in IEEE802.22 Cognitive Networks ........................................... 194
  Mohsen Nader Tehrani, *University of waterloo*
  Murat Uysal, *University of Waterloo*

Resource Allocation

Resource Allocation to Achieve Cross-Layer Metrics in Cooperative Networks ........................................... 198
  Ehsan Karamad, *University of Toronto*
  Raviraj Adve, *University of Toronto*

Resource Allocation for Secure OFDMA Decode-and-Forward Relay Networks ............................................ 202
  Derrick Wing Kwan Ng, *University of British Columbia*
  Robert Schober, *University of British Columbia*

Green Resource Allocation with QoS Provisioning for Cooperative Cellular Network .............................. 206
  Umesh Phuyal, *University of British Columbia*
  Satish Chandra Jha, *University of British Columbia*
  Vijay Bhargava, *University of British Columbia*
Cross-Layer Resource Allocation Approach for Multi-Hop Distributed Cognitive Radio Network ......................................................... 211
Satish Chandra Jha, University of British Columbia
Umesh Phuyal, University of British Columbia
Vijay Bhargava, University of British Columbia

Energy-Aware User Selection and Power Allocation for Cooperative Communication System with Guaranteed Quality-of-Service ........................................................................................................... 216
Rajiv Devarajan, University of British Columbia
Satish Chandra Jha, University of British Columbia
Umesh Phuyal, University of British Columbia
Vijay Bhargava, University of British Columbia
