2011 Fourth IEEE International Conference on Software Testing, Verification and Validation

(ICST 2011)

Berlin, Germany
21-25 March 2011
2011 Fourth IEEE International Conference on Software Testing, Verification and Validation

ICST 2011

Table of Contents

Message from the General Chairs .............................................................................................................................. ix
Message from the Program Chairs ............................................................................................................................. x
Steering Committee ................................................................................................................................................... xii
Conference Committees ............................................................................................................................................... xiii
Technical Program Committee ................................................................................................................................ xiv
Additional Reviewers ........................................................................................................................................... xvi
Supporters and Sponsors ........................................................................................................................................ xvii
Keynote Speakers ....................................................................................................................................................... xx

Research Track Papers

Using Semi-supervised Clustering to Improve Regression Test Selection Techniques .............................................. 1
Songyu Chen, Zhenyu Chen, Zhihong Zhao, Baowen Xu, and Yang Feng

Applying Aggressive Propagation-Based Strategies for Testing Changes ............................................................... 11
Raul Santelices and Mary Jean Harrold

Regression Testing in the Presence of Non-code Changes ...................................................................................... 21
Agastya Nanda, Senthil Mani, Saurabh Sinha, Mary Jean Harrold, and Alessandro Orso

Towards a Language and Framework for Penurious Testing ................................................................................... 31
Colin Atkinson, Florian Barth, Oliver Hummel, and Marcus Schumacher

Test Coverage of Data-Centric Dynamic Compositions in Service-Based Systems .............................................. 40
Waldemar Hummer, Orna Raz, Onn Shehory, Philipp Leitner, and Schahram Dustdar

Systematic Testing of Database Engines Using a Relational Constraint Solver ...................................................... 50
Shadi Abdul Khalek and Sarfraz Khurshid

Seed: An Easy-to-Use Random Generator of Recursive Data Structures for Testing ........................................... 60
P.C. Héam and C. Nicaud

Analysis of Mistakes as a Method to Improve Test Case Design .......................................................................... 70
Sigrid Eldh, Hans Hansson, and Sasikumar Punnekkat

Exploiting Common Object Usage in Test Case Generation ............................................................................... 80
Gordon Fraser and Andreas Zeller
Assessing Oracle Quality with Checked Coverage .................................................................90
   David Schuler and Andreas Zeller

Using Property-Based Oracles when Testing Embedded System Applications .........................100
   Tingting Yu, Ahyoung Sung, Witiwas Srisa-an, and Gregg Rothermel

An Empirical Evaluation of Assertions as Oracles ......................................................................110
   Kavir Shrestha and Matthew J. Rutherford

Efficient Mutation Killers in Action ...........................................................................................120
   Bernhard K. Aichernig, Harald Brandl, Elisabeth Jöbstl, and Willibald Krenn

Test Generation for X-machines with Non-terminal States and Priorities of Operations ..................130
   K. Bogdanov

Optimal Test Input Sequence Generation for Finite State Models and Pushdown Systems ..................140
   Ajay Chander, Dinakar Dhurjati, Koushik Sen, and Dachuan Yu

It is Not the Length That Matters, It is How You Control It .......................................................150
   Gordon Fraser and Andrea Arcuri

An Approach for Search Based Testing of Null Pointer Exceptions .............................................160
   Daniele Romano, Massimiliano Di Penta, and Giuliano Antoniol

An Evolutionary Algorithm for the Generation of Timed Test Traces for Embedded Real-Time Systems .................................................................................................................170
   Joachim Hänsel, Daniela Rose, Paula Herber, and Sabine Glesner

Runtime Verification of Linux Kernel Modules Based on Call Interception ..................................180
   Vladimir V. Rubanov and Eugene A. Shatokhin

Constraint-Based Program Debugging Using Data Structure Repair ...........................................190
   Muhammad Zubair Malik, Junaid Haroon Siddiqi, and Sarfraz Khurshid

Execution Hijacking: Improving Dynamic Analysis by Flying off Course .....................................200
   Petar Tsankov, Wei Jin, Alessandro Orso, and Saurabh Sinha

Tailored Shielding and Bypass Testing of Web Applications .......................................................210
   Tejeddine Mouelhi, Yves Le Traon, Erwan Abgrall, Benoît Baudry, and Sylvain Gombault

Using SQL Hotspots in a Prioritization Heuristic for Detecting All Types of Web Application Vulnerabilities ...................................................................................................................220
   Ben Smith and Laurie Williams

A Study of Usage-Based Navigation Models and Generated Abstract Test Cases for Web Applications ...............................................................................................................................230
   Sara Sprenkle, Lori Pollock, and Lucy Simko

Mutation-Based Test Generation from Security Protocols in HLPSL ........................................240
   Frédéric Dadeau, Pierre-Cyrille Héam, and Rafik Kheddam

Mutation Testing of “Go-Back” Functions Based on Pushdown Automata ...................................249
   Fevzi Belli, Mutlu Beyazit, Tomohiko Takagi, and Zengo Furukawa
Inferential Checking for Mutants Modifying Database States .................................................................259

Chixiang Zhou and Phyllis Frankl

Implementing and Evaluating a Runtime Conformance Checker for Mobile Agent Systems .................................................................269

Ahmad A. Saifan, Juergen Dingel, Jeremy S. Bradbury, and Ernesto Posse

Conformance Testing from Message Sequence Charts ........................................................................279

Haitao Dan and Robert M. Hierons

Security Model Evolution of PHP Web Applications ...........................................................................289

Dominic Letarte, François Gauthier, and Ettore Merlo

EFindBugs: Effective Error Ranking for FindBugs ..............................................................................299

Haihao Shen, Jianhong Fang, and Jianjun Zhao

Multicore SDK: A Practical and Efficient Deadlock Detector for Real-World Applications .................................................................309

Zhi Da Luo, Raja Das, and Yao Qi

A Framework for the Automatic Correction of Constraint Programs ......................................................319

Nadjib Lazaar, Arnaud Gotlieb, and Yahia Lebbah

Empirical Investigation of the Effects of Test Suite Properties on Similarity-Based Test Case Selection ........................................................................327

Hadi Hemmati, Andrea Arcuri, and Lionel Briand

Factors Limiting Industrial Adoption of Test Driven Development: A Systematic Review .................................................................337

Adnan Causevic, Daniel Sundmark, and Sasikumar Punnekkat

Industry Track Papers

An Empirical Study on the Relation between Dependency Neighborhoods and Failures .................................347

Thomas Zimmerman, Nachiappan Nagappan, Kim Herzig, Rahul Premraj, and Laurie Williams

CRANE: Failure Prediction, Change Analysis and Test Prioritization in Practice—Experiences from Windows ........................................................................357

Jacek Czerwonka, Rajiv Das, Nachiappan Nagappan, Alex Tarvo, and Alex Teterev

Improving Regression Testing Transparency and Efficiency with History-Based Prioritization—An Industrial Case Study ........................................................................367

Emelie Engström, Per Runeson, and Andreas Ljung

Experiences of System-Level Model-Based GUI Testing of an Android Application .................................................................377

Tommi Takala, Mika Katara, and Julian Harty

Model Checking a TTCAN Implementation .......................................................................................387

Daniel Keating, Allan McInnes, and Michael Hayes

A Systematic Test Case Generation Approach for Testing Message Length Variability .................................................................397

Kyungmin Go, Sungwon Kang, Myungchul Kim, and Jihyun Lee
Why are Bug Reports Invalid? ................................................................. 407

Jian Sun

PhD Symposium Track Papers

Risk–Based Security Testing in Cloud Computing Environments ............................................ 411

Philipp Zech

Towards Software Quality and User Satisfaction through User Interfaces ........................... 415

Pedro Luis Mateo Navarro, Gregorio Martinez Pérez, and Diego Sevilla Ruiz

Testing Resource Usage in Home Automation Systems ...................................................... 419

Yves Grasland

On the Improvement of the Mutation Score Using Distinguishing Test Cases ..................... 423

Simona Nica

Finding Software Vulnerabilities by Smart Fuzzing .......................................................... 427

Sofia Bekrar, Chaouki Bekrar, Roland Groz, and Laurent Mounier

Providing a Software Quality Framework for Testing of Mobile Applications .................. 431

Dominik Franke and Carsten Weise

SoftwareHardware Hybrid Systems Verification ............................................................. 435

Neelesh Bhattacharya

Cost Optimizations in Runtime Testing and Diagnosis of Systems of Systems ................... 439

Alberto Gonzalez-Sanchez

A Framework to Test Advanced Web Services Transactions ............................................. 443

Rubén Casado, Javier Tuya, and Muhammad Younas

Author Index .................................................................................................................. 447
