IFAC Workshop on Automation in Mining, Mineral and Metal Industry 2009

Vina del Mar, Chile
14-16 October 2009

Editor:

Luis G. Bergh

CONTENTS

Keynote papers

Automatic Control in Mineral Processing Plants: An Overview ................................................................. 1
D. Hodouin

Ore Processing: Grinding

Modelling and Simulation of Cone Crushers ............................................................................................... 13
Andreas Johansson

RNMPC Applied to Nonlinear Model of a ROM Ore Milling Circuit ......................................................... 19
Loutjie Coetzee, Ian Craig and Eric Kerrigan

Experiences and Lessons with Advanced Control Systems for the SAG Mill Control in Minera Los Pelambres .... 25
Daniel Silva and Luis Tapia

A Two-phase Objective Function for a Constrained MPC and its Application to the Grinding Plant .......... 31
Alexey Zakharov, Alexandre Boriouchkine and Sirkka-Liisa Jäämsä-Jounela

Multivariable Model Predictive Control of a Simulated SAG Grinding Plant ............................................. 37
César Garrido and Daniel Sbarbaro

Simulation of Grain Exposure of Ground Ore Using Voronoi Tessellation ................................................. 43
Reza Khalesi, Claude Bazin, Daniel Hodouin and Steve Bellec

Robust Multivariable Predictive Control Strategy on Sag Mills, Codelco Chile -Division El Teniente ............ 49
José Gatica, José Olivares, Benjamin Ramos and Juan Villalobos

Implementation of Multivariable Controller for Grinding -Classification Process ....................................... 55
Luis Nieto, José Olivares, José Gatica, Benjamin Ramos and Hugo Olmos

Ore Processing: Flotation

Troubleshooting and Diagnostic of Industrial Flotation Cells ........................................................................ 61
Juan Yianatos, Luis Bergh and Francisco Díaz

A Framework for the Modelling and Simulation of the Behaviour of a Specific Ore in Flotation Circuits ...... 67
Casper Steenkamp and David Phillpotts

Control of Flotation and Acquisition of the Key Control Variables ............................................................ 73
Leopold Blahous and Thomas Marx

Integrating Separability Curves to Expert Control Systems of Flotation Plants ........................................ 79
Luis Bergh and Juan Yianatos

Application of Adaptive Control for a Pilot-Scale Flotation Column ................................................... 84
Maria Persechini

The Long Way towards Multivariate Predictive Control of Flotation Processes ........................................ 90
Luis Bergh and Juan Yianatos

Multivariable Expert Fuzzy Control for a Rougher Flotation Circuit, with Grade Estimation in Intermediate Cells ... 96
Daniel Rojas, Aldo Cipriano and Jorge Cáceres
**Global Characterization of Froth Speed Behavior in a Rougher Flotation Line**

Felipe Nuñez, Gabriel Tejeda, Aldo Cipriano and Daniel Silva

**On Reconfigurability for Actuator Faults under Reliability Constraints**

Ahmed Khelassi, Didier Theilliol and Philippe Weber

**Control of Copper-Molybdenum Ore Concentration on the Basis of Continuous X-ray-fluorescence Analysis**

Valeriy Morozov, Valeriy Stolyarov, Zorigt Ganbaatar and Lodoy Delgerbat

---

**Ore Processing: Instrumentation**

- Image-based Level Measurement in Flotation Cells Using Particle Filters
  Phanindra Jampana, Sanej Chitralekha and Sirish Shah

- Machine Vision of Flotation Froths with a Rapid-Prototyping Platform
  Jani Kaartinen, Timo Roine and Jari Hätönen

- A Virtual Sensor For Estimating Particle Size of Hydrocyclones Overflow
  Luis Nieto, Jose Olivares, Jose Gatica, Benjamin Ramos and Hugo Olmos

- Automated Online Measurement of Particle Size Distribution using 3D Range Data
  Matthew Thurley

- Reflectance Spectroscopy in the Analysis of Mineral Flotation Slurries
  Olli Haavisto and Heikki Hyötyniemi

- Design of Mass Flowrate Estimators for n-products Plants
  Daniel Hodouin, Eric Poulin and Luc Lachance

- On-Line Bubble Size Analyzer for Collection Zone in Industrial Flotation Machines
  Claudio Acuna, Jose Borjas and Rodrigo Duarte

- The Online Determination of Bubble Surface Area Flux Using the CiDRA GH-100 Sonar Gas Holdup Meter
  Peter Amelunxen and Paul Rothman

- Bubble Size Analysis and Boundary Conditions for Automatic Control of Industrial Flotation Cells
  Luis Vinnett, Felipe Contreras and Juan Yianatos

- Soft-Sensor Estimation of an Apatite Thickener Operation at the Siilinjärvi Concentrator
  Antti Remes, Heikki Koivo and Jarmo Aaltoinen

- Reflectance Spectrum Based Classification of Ore
  Janne Pietilä and Olli Haavisto

- A Vision Based Wheel Slip Estimation Technique for Mining Vehicles
  Xiaojing Song, Lakmal Seneviratne and Kaspar Althoefer

---

**Steel: Casting**

- Weight Control to Pouring Liquid by Automatic Pouring Robot
  Yoshiyuki Noda, Kazuhiko Terashima, Makio Suzuki and Hiroyasu Makino

- Cancellation of Bulging Effect on Mold Level in Continuous Casting: Experimental Validation
  Karim Jabri, Alain Mouchette, Bertrand Bèle, Emmanuel Godoy and Didier Dumur

- Pressing Velocity Control Considering Liquid Temperature Change in Press Casting Process
  Ryosuke Tasaki, Yoshiyuki Noda, Kazuhiko Terashima and Kunihiro Hashimoto
Particle Swarm Optimization for Mold Level Control in Continuous Casting .......................................................... 203
Karim Jabri, Alain Mouchette, Bertrand Bèle, Didier Dumur and Emmanuel Godoy

Defect Detection Algorithm in Steel Billets Using Morphological Top-Hat Filter ...................................................... 209
Dongwook Lee, Young-il Kang and Sangchul Won

**Steel: FDI and modeling**

Decentralized and Autonomous Design for FDI of Distributed Control Systems .......................................................... 213
Dominique Sauter, Taha Boukhobza, Frédéric Hamelin and Didier Theilliol

Fault Detection of a Blending Tank Process Using Mixed Integer Linear Programming ........................................... 219
Soheil Salehpour, Andreas Johansson and Thomas Gustafsson

Characterisation of Model Error for Charpy Impact Energy of Heat Treated Steel ...................................................... 225
Mahdi Mahfouf, Yong Yang and Quian Zhang

Prediction of Machining Induced Residual Stresses in Aluminium Alloys ................................................................. 231
Qian Zhang, Mahdi Mahfouf, Soufiene Boumaiza, John Yates, Christophe Pinna, Richard Greene and Luis de Leon

Modelling Charpy Impact Energy of Heat-Treated Steel using Efficient Neural-Networks ...................................... 237
Mahdi Mahfouf, Yong Yang and Qian Zhang

**Steel: Hot Rolling**

Real-time Implementation of New Speed Control for an Experimental Hot-Rolling Mill ........................................... 243
Sid-Ahmed Gaffour, Mahdi Mahfouf, Yong Yang, Miguel Gama and Qian Zhang,

Robust Decentralized Tension Control in Hot Rolling ................................................................................................. 249
Kazuya Asano and Takashi Motomura

Tensile Strength Prediction for Hot Rolled Steels by Bayesian Neural Network Model ............................................... 255
Yong Yang, Mahdi Mahfouf, Derek Linkens and Quian Zhang

Model Predicting Control for Line Pacing in Steel Processing Lines ......................................................................... 261
Eiji Konaka, Tatsuya Suzuki, Kazuya Asano and Yoshitsugu Iijima

Simple Improvement of Control of the Electromechanical Screwdown System ....................................................... 267
Pavel Ettler

Input Weighted Data Granulation Using Hybrid Correlation Measures With Application to Metal Properties ........ 272
George Panoutsos, Mahdi Mahfouf, Quian Zhang and Sid-Ahmed Gaffour

**Pyrometallurgic:**

Digital Vision to Support the Operation of a Teniente Copper Converter ................................................................. 278
Max Schaaf, Aldo Cipriano and Zacarias Gomez

Estimation of Phases Levels in a Teniente Converter Using Machine Vision ............................................................. 282
Max Schaaf, Aldo Cipriano and Zacarias Gomez

Robust Data Reconciliation to Determine Basic Oxygen Furnace Set-points ........................................................... 286
Julien Francken, Didier Maquin, José Ragot and Bertrand Bèle

Application of Model-Predictive Control to Multi-Hearth Nickel Reduction Roasters ............................................. 292
Rubinê Gouveia, Geoff Lewis, Alfredo Restrepo, Lucas Rodrigues and Rubens Gedraite

Multivariable Control Application at Codelco Norte’s Flash Furnace ....................................................................... 297
Mallén Gajardo
Other topics:

SOMI: Towards a Standard Representation of Mining Objects .................................................................303
Patricio Inostroza, Ana Pezo and Andrea Nieto

Wireless SISO Channel Propagation Model for Underground Models .............................................................308
Walter Grote

Collaboration at the Enterprise Using Real Time Data Analysis: From Data to Action ....................................314
Osvaldo Bascur and Curt Hertler

Intelligent Asset Performance Management of a Uranium Solvent Extraction Circuit ..................................320
Yvonne Power, Andrew Barnfield and Jacek Narozny

Application of Inductive Monitoring System for Equipment Condition Monitoring .................................324
Enayet Halim, Harigopal Raghavan and Sirish Shah

Outliers Detection in Environmental Monitoring Data ...................................................................................330
Hugo Garces and Daniel Sbarbaro

Collaboration with the Operator in Focus ........................................................................................................336
Per Lundmark

Dynamic and Steady Behavior of Harmonic Filter for Compensating Resonance in Mining Systems ..........342
Jorge Pontt, Jose Rodriguez, Juan San Martin, Ricardo Aguilera and Hernán Robles
