2nd IFAC International Conference on Intelligent Control Systems and Signal Processing 2009

Istanbul, Turkey
21-23 September 2009

Editor:

Erdal Kayacan

ISBN: 978-1-61782-876-8
**CONTENTS**

**Regular Papers**

A new algorithm for structure optimization in fuzzy neural networks .......................................................... 1  
*B. Pizzileo, K. Li, and G. W. Irwin*

Adaptive Regulation for the Protein PKC in Personalized Medicine ............................................................... 7  
*M.A. Christodoulou, P. Evaggelos, and S. Stavros*

Extended Matrix Approach for the Identification of Takagi-Sugeno Fuzzy Model ............................................. 13  
*Agustín Jiménez, Basíl M. Al Hadithi, and Fernando Matia*

On the Multivariable Iterative Learning Control base on the Gradient Method .................................................. 20  
*Wataru Kase and Yasuhiko Mutoh*

Harmonic Elimination Control of an Inverter Based on an Artificial Neural Network Strategy ............................... 25  
*Rachid Taleb, Abdelkader Meroufel, and Patrice Wira*

Adaline-based approaches for time-varying frequency estimation in power systems .......................................... 31  
*Damien Halbwachs, Patrice Wira, and Jean Mercle*

Experimental Modelling of Propulsion Transients of a Brushless DC Motor and Propeller Pair under Limited Power Conditions: A Neural Network Based Approach ............................................................... 37  
*Muhammed T. Köroğlu, Mert Önkol, and Mehmet Önder Efe*

Motion Detection and Tracking of Classified Objects with Intelligent Systems .................................................. 43  
*Aydın Eresen, Nevrez İmamoğlu, and Mehmet Önder Efe*

Real-time Global Optimization using Multiple Units .......................................................................................... 49  
*F. Esmaeilzadeh Azar, M. Perrier, and B. Srinivasan*

State Estimation Based Optimal Control and NARMA-L2 Controllers of a Scaled-Model Helicopter ..................... 55  
*Mohamad R. Khaldi and Hassan H. El Abiad*

Constrained suboptimal dual control algorithms for discrete-time stochastic systems .......................................... 61  
*Andrzej Krolkowski and Dariusz Horla*

The Continuous System Equivalent to the System with Sliding Mode Control .................................................. 67  
*Ryszard S. Gessing*

The Air-Jet Texturing and Twisting Machine’s and Model Predictive Control Based on State-Space ...................... 73  
*Mehmet Baykara, Ertan Öznergiz, Cän Özsoy, Ali Demir, and Salih Gülşen*

*Manolis Christodoulou, Yiannis Boutalis, and Dimitrios Theodoridis*

Simultaneous data reconciliation and parameter estimation. Application to a basic oxygen furnace ...................... 86  
*Julien Francken, Didier Maquin, Jose Ragot, and Bertrand Bele*

Application of Varying Parameters Modelling with Gaussian Processes .......................................................... 92  
*Jus Kocijan and Kristjan Azman*

Policy Gradient Fuzzy Reinforcement Learning Control of Humanoid Walking .................................................. 98  
*Dusko M. Katic and Aleksandar D. Rodic*

Visualization of decision borders on spherical SOM and its Application to Clustering ......................................... 104  
*Nobuo Matsuda, Heizo Tokutaka, and Matashige Oyabu*

Bidding Decision in Reverse Auction Solved by Fuzzy Mathematical Programming and Genetic Algorithm ............. 109  
*Chi-Bin Cheng*

Linear parameter varying, finite impulse response filter design with application to reducing rise-time for rapid signal changes .......................................................................................................................... 115  
*Przemysław Orłowski*

New Horizons on Predictive Maintenance ........................................................................................................ 120  
*Izzet Y. Önel, Engin Çağlar, and Ahmet Duyar*
Car Crash Prevention Expert System in Urban Traffic Based on Ultrasounds ............................................................... 126
L. Alonso, J.P. Oria, M. Fernández, and C. Rodríguez

Creation of a Robot that is Conscious of Its Experiences ............................................................................................... 131
S. Torigoe, R. Igarashi, T. Komatsu, and J. Takeno

Stabilization of linear systems over networks with bounded time-varying delays ......................................................... 137
Imane Dilaneh and Laurent Laval

Active Suspension System – Energy Control .................................................................................................................. 146
Katerina Hyniova, Antonin Stibrsky, Jaroslav Honcu, and Alex Kruczek

A small scale viscometer based on IPMCs ..................................................................................................................... 153
P. Brunetto, S. Graziani, S. Strazzeri, and M. G. Xibilia

A Matlab Tool for Analyzing and Improving Fault Tolerance of Artificial Neural Networks ....................................... 158
Rui Borralho, Pedro Fontes, Ana Antunes, and Fernando Morgado Dias

3-Cycle-Free Persistence for Cooperative Control of Formations with Acyclic Control Structure ........................ 164
Tolga Eren

Discrete PDC control design with observer for trajectory tracking of nonholonomic mobile robot .............................. 170
El-H. Guechi, J. Lauber, M. Dambrine, G. Klančar, and S. Blažič

Improving Distributed Model Predictive Control Performance Via Weight Optimization using PSO ...................... 176
Paul Mc Namara and Dr. Gordon Lightbody

Optimal Linear Data Fusion for Systems with Missing Measurements .......................................................................... 182
Shady M. K. Mohamed and Prof. Saeid Nahavandi

Incremental Updateable Control Systems on an FPGA .................................................................................................. 186
T. Parkkila and S. D. Glaser

On Fraction Order Modeling and Control of Dynamical Systems .............................................................................. 192
Islam S. M. Khalil, A. Teoman Naskali, and Asif Sabanovic

Identification of Non Linear Multivariable Processes Modelled on Reproducing Kernel Hilbert Space: Application to Tennessee Process ................................................................. 197
Okba Taouali, Ilyes Elaissi, Nathalie Villa, and Hassani Messaoud

A comparative study of non linear MISO Process modelling techniques: Application to a chemical reactor ............ 203
Okba Taouali, Saidi Nabiha, and Hassani Messaoud

Electronic Nose for a Fire Detection System by Neural Networks ................................................................................. 209
Sigeru Omatu and Michifumi Yoshioka

Improvement of Bank Note Classification Reliability ....................................................................................................... 215
Ali Ahmadi, Sigeru Omatu, and Toshihisa Kosaka

Mobile Robot Navigation based on Fuzzy Discrete Event Systems ............................................................................. 219
Georgios Tampakis, Klaus Schmidt, and Yiannis Boutalis

Performance Based Sliding Mode Controller using Support Vector Machines .............................................................. 225
Sezai Tokat, Serdar Iplikci, and Lutfi Ulusoy

Finite-Time Stable Versions of the Continuous Newton Method and Applications to Neural Networks .................... 231
Navid Noroozi, Paknosh Karimaghaee, Ali Akbar Safavi, and Amit Bhaya

Sliding Mode Control of DC-DC Power Converters ................................................................................................. 237
Sergey V. Drakunov, Mahmut Reyhanoglu, and Brij Singh

Inter-Rays uncertainty and Fixed Size assumption for objects tracking using a Laser Scanner ................................... 243
Pawel Kmiotek and Yassine Ruichek

Optimization of Switching Instants for Optimal Control of Linear Switched Systems based on Genetic Algorithms ... 249
Mouadhi Sakly, Anis Sakly, Nesrine Majdoub, and Mohamed Benrejeb

Walking Control of a Biped Robot on an Inclined Plane ............................................................................................... 254
Evrим Taskiran, Utku Seven, Özer Koca, Metin Yilmaz, and Kemalettin Erbatur
Special Session 2: Intelligent Aerospace Control Systems

LMI Optimization of Sensors System for the Guaranteed Exactitude of Control of Elastic Vehicle ........................................... 260
Sergey A. Brodsky, Alexander V. Nebylov, and Alexander I. Panferov

Regular Papers

Estimation Based PID controller-Sensorless Wave Based Technique ................................................................................................. 266
Islam S. M. Khalil, Emrah D. Kunt, and Asif Sabanovic

Special Session 2: Intelligent Aerospace Control Systems

Control of Fuzzy Switched Time-Delay Uncertain Systems: An Improved Robust Output Feedback Design .................... 272
Yi Liu, Georgi M. Dimirovski, and Jun Zhao

Regular Papers

On The Optimal Placement of Multiple Visual Sensor Based Binary Particle Swarm Optimization ........................................ 279
Y. Morsly, N. Aouf, and MS. Djouadi
Visually Aided Force Control with Fuzzy Parameter Tuning ........................................................................................................... 286
Berk Calli, Kemalettin Erbatur, and Mustafa Unel

Special Session 2: Intelligent Aerospace Control Systems

Attitude Stabilization of a Nadir-Pointing Small Satellite Using Only Magnetic Actuators ................................................ 292
Mahmut Reyhanoglu, Chau Ton, and Sergey Drakunov
Intelligent algorithms of navigation on the surface of Mars planet ................................................................................................ 298
Benzerrouk Hamza, Alexander Nebylov, and Gennady Yatsevitch

Regular Papers

Neural Network Seismic Detector .................................................................................................................................................. 304
Guilherme Madureira and Antonio E Ruano

Special Session 1: Robust Adaptive Soft Sensors

Noise-Adaptive Soft Sensors in Mobile Robots through Particle Filtering ................................................................................ 310
Sadiq Jaffer and Ken Young

Regular Papers

Non-quadratic robust stability of Takagi-Sugeno models ............................................................................................................. 315
Miguel Bernal and Thierry-Marie Guerra
A Two-Time-Scale Approximation of the Dynamics Toward Consensus Among Agents in Diffusive Interactions .......... 321
Franco Garofalo
Guaranteed Cost Control For Constrained Takagi-Sugeno Fuzzy Systems ............................................................................. 325
Carlos Arino, Emilio Perez, and Antonio Sala
Adaptive Output Feedback Control Based on Neural Networks: Application to Flexible Aircraft Control ...................... 331
J. Bordeneuve-Guibe, L. Bako, and M. Jeanneau
Robust Takagi-Sugeno observer with immeasurable premise variables: a Type-2 approach................................. 337
H. Kerkeni, J. Lauber, and TM. Guerra

Active Vibration Control of a Flexible Plate Using Real Coded Genetic Algorithm ........................................ 343
S. Md Salleh and M. O. Tokhi

Nonlinear attitude estimation based on fusion of inertial and magnetic sensors: Bio-logging application .......... 349
Hassen Fouriati, Noureddine Manamanni, Lissan Afilal, and Yves Handrich

Rana Ortac-Kabaoglu, Ibrahim Eksin, Engin Yesil, and Mujde Guzelkaya

RFID based Mobile Robot Localization and Pseudorandom Tag Arrangement .............................................. 361
Sungbok Kim and Sanghyup Lee

A hydrographical network optimization under flood conditions ..................................................................... 367
Majdi Argoubi, Ismahene Hadji Khalifa, and Abdelkader El Kamel

Special Session 2: Intelligent Aerospace Control Systems

Intelligent Control Systems Design for Flexible Aerospace Vehicles: Theoretical and Software Tools.............. 373
Alexander I. Panferov, Sergey A. Brodsky, and Alexander V. Nebylov

Regular Papers

Comparison of data and model based sensor data pre-treatment in a hydrocracker ........................................ 379
M. Stockmann, R. Haber, and U. Schmitz

Structure Borne Noise Analysis for Estimating Fuel Injection Durations ......................................................... 385
Konrad Christ, Sinisa Baricevic, and Uwe Kiencke

$H\infty$ Based Decentralized Fuzzy Lyapunov Controller Design for Takagi-Sugeno Interconnected Descriptors........ 391
Dalel Jabri, Kevin Guelton, and Noureddine Manamanni

Pinhole detection in steel slab images using machine vision .............................................................................. 397
Doo-chul Choi, Jong Pil Yun, Yong-ju Jeon, and Sang Woo Kim

Adaptive Filter Based On Lyapunov Stability Theory: Application to On-line Bit-Rock Interaction Surveillance ...... 402
Amadou BA, Slim Hbaieb, Nazih Mechbal, and Michel Verge

Evolutionary optimization methods for predictive on-off control .................................................................... 408
Ulrich Schmitz, Robert Haber, and Ruth Bars

Evolving RBF Predictive Models to Forecast the Portuguese Electricity Consumption ...................................... 414
Pedro M. Ferreira, Antonio E. Ruano, Rui Pestana, and Laszlo T. Koczy

Special Session 1: Robust Adaptive Soft Sensors

Data and Knowledge Driven Adaptive Evidential Soft Sensor Model for Monitoring Unmeasured Parameters...... 420
Zhi-Gang Su, Pei-Hong Wang, Xiang-Jun Yu, and Zhen-Zhong Lv

Regular Papers

An Effective Increase of the Basin of a Quadratic Functional Global Minimum .................................................. 427
Jacob M. Karandashev and Boris V. Kryzhanovsky

Detection of signal drifts by different control charts ....................................................................................... 432
T. Friebel and R. Haber

R-Object Model for Evolutionary Robots using Multi-robot Cooperation ........................................................... 438
Ji-Woo Park, Yun-Sik Son, Jin-Woo Jung, and Se-Man Oh
Special Session 2: Intelligent Aerospace Control Systems

PD-Fuzzy Controller Tuned with PSO for Robot Trajectory Control ................................................................. 444
Oguzhan Karahan and Zafer Bingul

Regular Papers

A Mechatronic CAN-Based Functional Design and Verification Unified Approach........................................... 450
Mohamed Shedeed, M. Galal Elshafey, Mohamed Sobh, and Sherif Hammad

Special Session 2: Intelligent Aerospace Control Systems

Intelligent Approach to Experimental Estimation of Flexible Aerospace Vehicle Parameters ...................... 457
Sergey A. Brodsky, Habeeb Aro, and Lanre Adetoro

Regular Papers

Properties of a Robust Kalman Filter .................................................................................................................. 465
N. Khan and D-W Gu

Heat exchanger fouling detection and lifetime estimation by regression ......................................................... 471
T. Friebel, M. Stockmann, and R. Haber

Elman Network in Kappa Number Prediction .................................................................................................. 477
Kauko Leiviska

Optimal Control of Switched Linear Systems by Particle Swarm Optimization .............................................. 483
Sahbi Boubaker, Mohamed Djemai, Noureddine Manamanni, and Faouzi M‘Sahli

Learning Strategies for Local Model Networks with Higher Degree Polynomials ........................................... 490
Oliver Baenfer and Oliver Nelles

Integrated Longitudinal and Lateral Control System Design for Autonomous Vehicles .................................. 496
Jin Zhao and Abdelkader El Kamel

DSP Based Sensorless PM DC Drives Using a Proportional plus Sliding Mode Control .................................. 502
Mehmet Dal

Special Session 2: Intelligent Aerospace Control Systems

Some Methods of High Handling Qualities Providing in Whole Flight Envelope .............................................. 508
V.G. Borisov, B.V. Pavlov, and A.M. Shevchenko

Regular Papers

An Application of the Inpainting Algorithm for Recovering Packet Losses from Transmitting Sequential Quad Tree Compressed Images Over Wireless Sensor Networks................................................................. 514
P. Stavrou, G. Nikolakopoulos, N. Fanakis, A. Tzes, and T. Theoharis

Discrete fractional Kalman filter ....................................................................................................................... 520
Moufida Abdelhamid, Mohamed Aoun, Slaheddine Najar, and Mohamed Naceur Abdelkrim

Switching Controller Design for Nonholonomic Four-Wheeled Vehicles via Finite-Time Stabilization Method .... 526
Guisheng Zhai, Yoshiyuki Miyoshi, Joe Imae, and Tomoaki Kobayashi

A New Definition of Formation With an Algorithm ......................................................................................... 532
Guisheng Zhai, Junya Takeda, Tomoaki Kobayashi, and Joe Imae
Special Session 1: Robust Adaptive Soft Sensors

Soft Sensor Based Nonlinear Control of A Chaotic Reactor ................................................................. 537
Karri Rama Rao, D.P. Rao, and Ch. Venkateswarlu

Special Session 2: Intelligent Aerospace Control Systems

Intelligent Control Systems for Wing-In-Ground Effect Vehicles ............................................................... 544
Alexander Nebylov, Sukrit Sharan, and G. Elangovan

Special Session 1: Robust Adaptive Soft Sensors

A Novel Soft Sensor Method Detecting Completion of Transition for Industrial Polymer Processes .......... 551
Hiromasa Kaneko, Masamoto Arakawa, and Kimito Funatsu
Data Preprocessing in Data Based Process Modeling .................................................................................. 559
Dražen Slišković, Ratko Grbić, and Emmanuel K. Nyarko

Regular Papers

Luenberger Observer based Sensor and Actuator Fault Detection for Chemical Reactor ......................... 566
Aicha Elhsoumi, Rafika El Harabi, Saloua Bel Hadj Ali Naoui, and Mohamed Naceur Abdelkrim

Special Session 1: Robust Adaptive Soft Sensors

Soft sensors: where are we and what are the current and future challenges? ........................................... 572
Petr Kadlec and Bogdan Gabrys

Regular Papers

Application of Fuzzy Sliding Mode to control of Manipulator Robot actuated by Pneumatic artificial Muscles .... 578
A. Rezoug, F. Hamerlain, and M. Hamerlain
Robust Observer-based Fuzzy Control for Variable Speed Wind Power System ........................................ 584
Hwa Chang Sung, Jin Bae Park, and Young Hoon Joo
Design and Development of Feedback Control Hydraulic Airbrake Actuators for a High Performance Aircraft .... 589
Tanuja Sheorey
