13th Process Plant Safety Symposium 2011

(PPSS)

Topical Conference at the 2011 AIChE Spring Meeting and 7th Global Congress on Process Safety

Chicago, Illinois, USA
13 – 17 March 2011

ISBN: 978-1-61782-887-4
TABLE OF CONTENTS

Asset Based MOC Scoping and Approval ........................................................................................................................... 1
   William R. Matthews
Quantitative Models for Assessing MOC Performance ............................................................................................................... 10
   Rainer Hoff
Management of Change (MOC) Auditing System ...................................................................................................................... 24
   R. Wayne Garland
A Conceptual Approach to the Evaluation of Layers of Protection for Inherently Safer System Design .......................... 37
   J. Wayne Chastain, Robert Kline
Considerations Beyond Basic LOPA ........................................................................................................................................ 58
   H. W. Thomas, J. V. Saverino
Incorporating and Quantifying Human Activities and Actions In Layer of Protection Analysis ........................................... 65
   Philip M. Myers
The Interrelationship of Risk Criteria and Frequency Modifiers ............................................................................................. 90
   Angela E. Summers, W. Hearn
How Layer of Protection Analysis In Europe Is Affected by the Guidance Drawn up After the Buncefield Accident .... 103
   Richard Gowland
Using LOPA for SIL Assignment: A Tale of Two Plants ....................................................................................................... 116
   Michael S. Schmidt, Dan Kilpatrick
An Analysis of CSB Investigation Reports for Inherent Safety Learnings ........................................................................... 137
   Paul R. Amyotte, Dustin K. MacDonald, Faisal I. Khan
Inherent Safety In Front End Engineering .............................................................................................................................. 155
   Ian Sutton
Inherently Safer Design - Not Only about Reducing Consequences! ..................................................................................... 171
   Dennis C. Hendershot
Making Existing Process Plants Inherently Safer ..................................................................................................................... 185
   Victor H. Edwards, Jack Chosnek
Inherently Safer Acids - A Case Study on the Application of Polyelectrolytes ................................................................. 195
   Elliot M. Wolf
Shutdown Systems and Their Effect on Commissioning ......................................................................................................... 203
   Doug Cicerone
The Obvious-to-Obscure Process Safety Checklist for Plant Engineers ................................................................................ 214
   John T. Perez
Incident Investigation- Addressing Common Oversights ......................................................................................................... 223
   Julie D. White
Management of Change (MOC) Basics for Plant Engineers ................................................................................................. 224
   R. Wayne Garland
A Work Process for Revalidating LOPAs and Other Risk Analyses ................................................................................... 232
   Timothy J. Wagner, John W. Champion
How to Efficiently Perform the Hazard Evaluation Required for Non-Routine Modes of Operation (Startup, Shutdown, Online Maintenance) .................................................................................................................. 252
   Bill Bridges, Tony Clark
Using the HAZID Study, HAZOP Study and LOPA to Generate Ideas for Inherently Safer Designs ................................ 277
   Steven T. Player, Kristin D. Hockett, Senem Surneli
Strong Reporting Culture as Stepping Stone to Continuously Drive Safety Performance Improvement ...................... 288
   Joe Stough
Improving Process Safety Culture: An Audit Checklist for Effective First Line Supervision Based on Common Operations Failure Modes .................................................................................................................. 290
   Peter Bullen, Jason C. Laberge
Near Miss Reporting Behavior and the Safety Climate - A Scenario-Based Study ............................................................... 300
   Sunil D. Lakhiani
Optimizing a Mechanical Integrity Program Using Risk Based Inspection - A Case Study ........................................... 310
   Tony Poulassichidis
The Importance of Mechanical Integrity Inspection for Successful Capital Projects ......................................................... 328
   Paul F. Schubert, K. Stell
Good Engineering Practices - Inspection and Test Frequencies ........................................................................................... 335
   Richard Prugh
An Update on OSHA's PSM National Emphasis Programs ................................................................. 347
Lisa Long, James Lay, Mike Marshall
Chemical NEP Inspection Preparation ............................................................................................ 357
Mark S. Dreux
The Challenge to Implement and Maintain An Effective PSM Program ........................................ 358
Ken Hanchey, James R. Thompson
