</table>
An Effective Crashworthiness Design Optimization Methodology To Improve Helicopter Landing
Gear Energy Absorption ........................................................................................................... 126
C. Tho, B. Wang

A Method of Reducing Blade Sailing through the use of Trailing Edge Flaps ............................ 141
M. Jones, S. Newman

M. Anghieri, L. Castelletti, E. Francesconi, M. Pistoia, A. Milanese

A Centrifugal Force Actuated Variable Span Morphing Helicopter Rotor ..................................... 163
T. Prabhakar, J. Steiner, D. McLaughlin, F. Gandhi

12-DoF Dynamics Model of a UAV Helicopter using Analytical and Parameter Identification Techniques ........................................................................................................... 178
S. Bhandari, A. Samuel, R. Colgren

Subspace-based System Identification for Helicopter Dynamic Modelling .................................... 190
P. Li, I. Postlethwaite, M. Turner

Validation of Simulated Dynamic Interface Testing as a Tool in the Forecasting of Air Vehicle Deck
Limits and Deck Landing Aids .................................................................................................. 202
B. Ferrier, J. Duncan, D. Carico

Testing and Evaluation of Landing Aids to Improve Helicopter/Ship Operational Limits .................... 219
B. Ferrier, D. Carico

Testing and Evaluation of Landing Aids to Improve UAV/Ship Operational Limits ........................... 235
B. Ferrier, J. Duncan, B. Lumsden

Investigation of Rotor Blade Structural Dynamics and Modeling Based on Measured Airloads .......... 249
J. Ho, H. Yeo, R. Ormiston

Obtaining Usage Credits from Monitoring of Helicopter Dynamic Components without Impacting
Safe Life Reliability .................................................................................................................. 272
R. Vaughan, J. Chang, M. Rogers

A Conceptual Method For Mission Based Analysis And Design Of Military Multi Role Helicopters .......................................................................................................................... 285
C. Heister, V. Gollnick

Requirements Management: We're All In This Together ................................................................... 295
B. Tammany

Novel Eulerian Vorticity Transport Wake Module for Rotorcraft Flow Analysis ............................... 304
G. Whitehouse, A. Boschitsch, T. Quackenbush, D. Wachspres, R. Brown

Dual-Sensor Use in the AH-64 Crew Station for Urban Combat in Operation Iraqi Freedom ............. 320
J. Heinecke, C. Rash, K. Hiatt

Flight Investigation of Hyperstereo Vision in Helmet-Mounted Display Designs ................................. 340
C. Rash, M. Kalich, W. McLean, J. Ramiccio

Development of Full Flight Envelope Helicopter Simulation Using System Identification .................. 368
L. Zivan, M. Tischler

Wind-Tunnel Assessment of the Concept of Active Flaps on a Helicopter Rotor Model .................. 394
Y. Delrieux, P. Lecoste, P. Crozier, B. Gimotet, H. Rochettes

The Nature Of Vortex Ring State ................................................................................................ 408
A. Brand, M. Dreier, B. Kisior, T. Wood

An Enhanced HUMS Foundation for Rotorcraft IVHM .................................................................... 427
M. Schoeller, T. Meyer, C. Armenio, M. Roemer

Deployable System for Crash-Load Attenuation .............................................................................. 442
S. Kellas, K. Jackson

Gerard Post Herrick (1873 – 1955) America’s Unforgettable “Forgotten” Convertiplane Pioneer ...... 460
B. Charnov

How the Longest Patent Case in U.S. History Defined the RotaryWing Legacy of Harold F. Pitcairn ... 469
M. Bisanz

Hovering Helicopter Rotor Experiments And Simulations In A Closed-Circuit Wind Tunnel ............ 477
A. Pape, M. Massignoun, P. Crozier

CFD Simulation Of Helicopter Rotor In The Vortex Ring State Regime ........................................ 487
E. Hoinville, T. Renaud

Flight Test, Simulation and Passive Stabilization of a Cargo Container Slung Load in Forward Flight 497

Ground Test of a Hub Mounted Active Vibration Suppressor ...................................................... 527
M. Wilson, M. Jolly

Toward a Real-Time Measurement-Based System for Estimation of Helicopter Engine Degradation
Due to Compressor Erosion ........................................................................................................... 542
J. Litt, D. Simon
A Sequential Shifting Algorithm for Variable Rotor Speed Control .......................................................................................................................... 555
J. Litt, J. Edwards, J. DeCastro

A VTOL Front Line Delivery System UAV Utilizing Counter-Rotating Mono-Tilt-Rotor Technology ................................................................. 566
S. Yassini

Application Of Computational Fluid Dynamics During The Conceptual Design Of The Bell Jhl Quad Tiltrotor ........................................................................................................................................ 576
J. Narramore, G. Lancaster, C. Sheng

The Evolution Of A Rotorcraft Constructive Simulation Model .......................................................................................................................... 589
G. Nichols, J. Stone

Preliminary Design Optimization On Active Twist Rotor Blades Incorporating Single Crystal Macro Fiber Composites .......................................................................................................................... 599
J. Park, S. Shin

Optimum Rotor Performance In Axial Flow By Finite-State Methods ........................................................................................................................................ 609
D. Peters, C. Garcia-Duffy

Tilt Rotor Pitch/Flight-Path Handling Qualities ...................................................................................................................................................... 623
N. Cameron, G. Padfield

Calculation of Hub Loads at Low Airspeeds with Active Control .......................................................................................................................... 638
S. Kottapalli

Investigation of MR Dampers for Enhanced Crashworthiness and Vibration Isolation of Helicopter Crew Seats ........................................................................................................................................ 661
G. Hiemenz, W. Hu, N. Wereley

J. Howlett, M. Whalley, M. Takahashi, P. Tsenkov, G. Schulein

Design Optimization for Soft-Inplane Tiltrotor Whirl Flutter Stability Improvement .......................................................................................................................... 694
J. Paik, F. Gandhi

Design and Performance Evaluation of Full Scale On-board Active Flap System .......................................................................................................................... 707
K. Noboru, S. Saito, T. Fukami, T. Komura

A Re-configurable Portable Simulator to Support Rotorcraft Tactical Mission Rehearsal and Advanced Concepts Prototyping ........................................................................................................................................ 718
R. Seals, R. Lamont, M. Brychcy, P. Redkoles, S. Margetich, J. Taylor

Longitudinal Tip-Path-Plane Measurement using an Optics-Based System ...................................................................................................................... 730
R. Sickenberger, F. Schmitz

Optimization and Piloted Simulation Results of the AH-64D Modern Control Laws .......................................................................................................................... 739
J. Harding, M. Mansur, M. Tischler, S. Moody, R. McCann

Vertical Takeoff UAV Conceptual Designs and their Key Technologies ...................................................................................................................... 753
S. Troutman, J. Patterson III, E. Keen

Advanced Technology Transition and the CT7-5 Technology Demonstrator Engine ...................................................................................................................... 768
S. Spring, M. Coleman, J. Kingsley, K. Kirtley

Windmills to Choppers: The Korean War and the Evolution of the Helicopter ...................................................................................................................... 773
R. Connor

Volume 2

Height-Velocity Testing Of A Growth Rotor For The Bell 407 Aircraft .......................................................................................................................... 792
J. Schillings, P. Hollifield, J. Wasylyszyn, J. McCollough, R. Grife

Use of Physics-based Approach to Enhance HUMS Prognostic Capability .......................................................................................................................... 803
D. He, S. Wu, E. Bechhoefer

Flight Data Recorders as HUMS: A Report on Data Fusion Issues, Including the Accuracy of Manually-Entered Data from an Australian Army Black Hawk Trial .......................................................................................................................... 811
C. Knight

Weapon System Readiness- Metrics, Analysis, and Management .......................................................................................................................... 823
G. Skinner

Feasibility of Helicopter Transported Pods to Support Homeland Security ...................................................................................................................... 826
E. Ford, R. Adrezin, T. Filburn, P. Norwood, F. Wei, F. Gallagher, S. Lange

Lift Fans as Gyroscopes for Controlling Compact VTOL Air Vehicles: Overview and Development Status of Oblique Active Tilting ........................................................................................................................................ 836
G. Gress

Ground Resonance History Of The H-34 Helicopter (Sikorsky Model S-58) .......................................................................................................................... 845
E. Wood, M. Couch
