2011 Fifth International Conference on Secure Software Integration and Reliability Improvement

(SSIRI 2011)

Jeju Island, South Korea
27 – 29 June 2011
# 2011 Fifth International Conference on Secure Software Integration and Reliability Improvement
## SSIRI 2011
### Table of Contents

| Message from Steering Committee Chairs                          | viii |
| Message from General Chairs                                    | ix  |
| Message from Program Chairs                                    | x   |
| Committees                                                     | xi  |
| Additional Reviewers                                            | xv  |
| Keynotes                                                       | xvi |

---

### Session 1A: Secure Software Development

Towards an Enhanced Design Level Security: Integrating Attack Trees with Statecharts ................................................................. 1  
*Omar El Ariss, Jianfei Wu, and Dianxiang Xu*

Probabilistic Risk Assessment for Security Requirements: A Preliminary Study ......................................................... 11  
*Seok-Won Lee*

Component-Based Malicious Software Engineer Intrusion Detection ................................................................. 21  
*Michael E. Shin, Snehadeep Sethia, and Nipul Patel*

### Session 1B: Verification & Validation

Execution Constraint Verification of Exception Handling on UML Sequence Diagrams ................................................................. 31  
*Selim Ciraci, Hasan Sözer, Mehmet Akşit, and Wilke Havinga*

Runtime Verification of Domain-Specific Models of Physical Characteristics in Control Software ......................................................... 41  
*Arjan de Roo, Hasan Sözer, and Mehmet Akşit*

Validation of SDL-Based Architectural Design Models: New Coverage Criteria ................................................................. 51  
*Andy Restrepo and W. Eric Wong*
Session 1C: Monitoring
Using Partial Ordered Numbers to Control Information Flows .........................................................60
Shih-Chien Chou

Security Goals Assurance Based on Software Active Monitoring .....................................................70
Changzhi Zhao, Wei Dong, Martin Leucker, and Zhichang Qi

Model-Driven Monitoring of Time-Critical Systems Based on Aspect-Oriented Programming ..................80
Ki-seong Lee and Chan-Gun Lee

Session 2A: Security Modeling
A Feature-Based Modeling Approach for Building Hybrid Access Control Systems ........................................88
Sangsig Kim, Dae-Kyoo Kim, Lunjin Lu, Sooyong Park, and Suntae Kim

A Practical Covert Channel Identification Approach in Source Code Based on Directed Information Flow Graph .................................................................98
JingZheng Wu, Liping Ding, Yongji Wang, and Wei Han

Comprehensive Two-Level Analysis of Static and Dynamic RBAC Constraints with UML and OCL ..............108
Mirco Kuhlmann, Karsten Sohr, and Martin Gogolla

Session 2B: Software Quality Analysis
Deriving Data Dependence from/for UML State Machine Diagrams ......................................................118
Hyeon-Jeong Kim, Doo-Hwan Bae, Vidroha Debroy, and W. Eric Wong

Automatic Synthesis of Static Fault Trees from System Models .........................................................127
Jianwen Xiang, Kazuo Yanoo, Yoshiharu Maeno, and Kumiko Tadano

Evaluation of Experiences from Applying the PREDIQT Method in an Industrial Case Study .....................137
Aida Omerovic, Bjørnar Solhaug, and Ketil Stølen

Session 2C: Software Testing
On Testing Effectiveness of Metamorphic Relations: A Case Study ......................................................147
Mahmuda Asrafi, Huai Liu, and Fei-Ching Kuo

Mutation-Based Evaluation of Weighted Test Case Selection for Firewall Testing ......................................157
Tugkan Tuglular and Gurcan Gercek

RELEASE: Generating Exploits Using Loop-Aware Concolic Execution ..............................................165
Bing-Han Li and Shiuhpyng Shieh
**Session 3A: Reliability Improvement**

Towards a Reliable Spam-Proof Tagging System .................................................................174
   Ennan Zhai, Liping Ding, and Sihan Qing

Dynamic Service Replacement to Improve Composite Service Reliability ..........................182
   Jong-Phil Kim and Jang-Eui Hong

ReLACK: A Reliable VoIP Steganography Approach ........................................................189
   Mohammad Hamdaqa and Ladan Tahvidari

**Session 3B: Safety & Validation**

Safe Software: Does It Cost More to Develop? ...............................................................198
   W. Eric Wong, Andrea Demel, Vidroha Debroy, and Michael F. Siok

An Organization-Driven Approach for Enterprise Security Development and Management ..............................................................................................................208
   Lirong Dai and Yan Bai

Trust Observations in Validation Exercises ......................................................................216
   F. Amato, M. Felici, P. Lanzi, G. Lotti, L. Save, and A. Tedeschi

**Author Index** ..................................................................................................................224
