2011 International Conference on Intelligence Science and Information Engineering

(ISIE 2011)

Wuhan, China
20-21 August 2011
2011 International Conference on Intelligence Science and Information Engineering

ISIE 2011

Table of Contents

Message from the General Chairs ................................................................. xv
Organizing Committee ........................................................................... xvi

Technical Papers

Generalized Laguerre Function Approximation and Its Application to Ordinary Differential Equation ................................................................. 1
  Zhang Xiao-yong and Li Yan

Robust $H_{\infty}$ Output Feedback Control for a Class of Networked Control Systems with Long Time-Delay .......................................................... 5
  Zhang Hongkai, Li Yang, Li Shanshou, Wu Chao, Xie Chenlei, and Wang Lirong

Fuzzy Graph-Theoretical Clustering Approach on Spatial Relationship Constrain ....................................................................................................................... 9
  Liu Suolan, Wang Jianguo, and Wang Hongyuan

Study of Different Angle Inner Nozzle Flow Field Based on Suction-Type RC Bit ........................................................................................................ 13
  Zhu Lihong, Wang Ruihe, Ni Hongjian, Liu Jianlin, Yin Kun, and Ren Hong

Analysis on Modulation Principle of Mechanical Spring Valve Block-Type Pulse Jet ........................................................................................................ 17
  Ni Hongjian, Zhu Lihong, Huo Hongjun, and Tang Zhiwen

A New Feature Parameter for MFSK/MPSK Recognition ........................................... 21
  Min Zhou and Quanyuan Feng

Research on the Construction and Application of the Knowledge Integration Model of Ontology-Based Intelligence Study ............................................. 24
  Gong Zhiping, Yang Xiaosong, Wang Shuo, and Liu Jinbiao

Tweets Reading Probability Analysis Based on Competing-Window Model ....... 28
  Jianjun Xie, Chuang Zhang, and Ming Wu
Design and Implementation of Mobile Robot Remote Fire Alarm System ..................................................32
   Hongke Xu, Hao Chen, Chao Cai, Xunzhao Guo, Jianwu Fang, and Zhu Sun
Predictive Control of Vehicle Based on Echo State Network .................................................................37
   Shaobo Ni, Lei Liu, Zhishen Wang, and Zirui Wang
The QoS Routing for Anycast Message ....................................................................................................41
   Tan Xuegong
PGP E-Mail Protocol Security Analysis and Improvement Program .........................................................45
   Dai Kuobin
The Teaching Approach to Prompt Mathematic Thought Method by Using “Geometer’s Sketchpad” ..........49
   Shao Gui-ming
The Behavior Modes of Multiple Agents in Knowledge Management System Based on Complexity Theory .............................................................53
   Yue-xin Li and Ling Zhang
The Supplementation and Completion of Multi-agent Knowledge Management to CAS Theory ..............57
   Ling Zhang and Yue-xin Li
Entanglement of Graph Qutrit States ........................................................................................................61
   Hai-tao Li and Xiao-yu Chen
Transition from IPV4 to IPV6 Network Application: Take a Case as an Example ....................................65
   Yuan-yuan Lu
Analysis of Informatization Construction in Coal Enterprise Based on SaaS ........................................69
   Xiao Qing and Zhu Zemin
Entanglement Upper Bound of Stabilizer Codewords ............................................................................73
   Yu-qian Wu and Xiao-yu Chen
Research on Campus Network IPV6 Transition Technology ...................................................................77
   Chunling Wei
Determining Parameters in the Phase-Space Reconstruction of Multivariate Time Series on Genetic Algorithm ..................................................................................................................81
   Hui Tao, Xiao-Ping Ma, and Mei-Ying Qiao
Security Analysis and Improvement of Dual Signature in Electronic Payment System ............................85
   Wei Chao and Zhihua Hu
Algorithm of Reflection Coefficient for Unbounded Media in Beam-Displacement Ray-Mode Theory ....89
   Lin Zhang, Lianglong Da, and Yanxia Zhou
Multi-objective Fuzzy Mutative Scale Chaos Optimization Algorithm and Application .................................................................................................................................93
  Liang Wei, Shi Zhen, and Wang Sihui

Design of Monitoring System for Coal Mine Safety Based on MSP430 and nRF905 .........................................................................................................................................................................................98
  Yingli Zhu, Wanghui Zeng, and Lingqing Xie

Concept-Lattice-Based Text Filtering System Design and Implementation .............................................................................................................................102
  Li Guan-yu, Dong Mei-xia, and Rao Zhang-min

A Web Services Trusty Evaluation Model Based on Feedback Credibility ..............................................................................................................................107
  Haitao Wang and Min Zhang

Direct Decomposition about Direct Sum Decomposition of Space .............................................................................................................................111
  Chen Hui-ru and Liu Zhi-ying

The Properties of Adjoint Matrix ..................................................................................................................................................................................113
  Chen Hui-ru and He Chun-lin

A Multi-sensor Remote Sensing Image Matching Method Based on SIFT Operator and CRA Similarity Measure ..............................................................................................................................115
  Yingdan Wu and Yang Ming

A Reliable Matching Algorithm Based on the Rational Function Model Bundle Adjustment for Satellite Imagery .............................................................................................................................119
  Yang Ming and Chuijiang Chen

A Survey on Classified Document Protection Means ..........................................................................................................................................................123
  Rui-hai Yi, Xiang Li, and Yu Lu

A Multi-denomination Electronic Invoice Protocol ..........................................................................................................................................................127
  Xiao-han Sun and Zhi-bin Ren

3D Volume Clipping Based on Distance Field .................................................................................................................................................................130
  Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

An AVO Inversion Algorithm Base on Time-Lapse Seismic Data ..........................................................................................................................................................133
  Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

Preliminary Study on Data Management Technologies of Internet of Things ..........................................................................................................................137
  He Zhonglin and He Yuhua

Interactive 3D Visualization of Large CT Datasets .................................................................................................................................................................141
  Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

Real-Time Collision Detection Based on Surgery Simulation ..................................................................................................................................................145
  Ningjun Ruan, Kai Xie, HuoQuan Yu, and XiuLi Meng

GPU-Based HHT Algorithm for Large Seismic Data .................................................................................................................................................................148
  Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng
Design and Realization of Digital Educational Resources Sharing Platform
Based on Semantic Web .......................................................... 152
   Lin Guoman

Design and Realization of Public Oriented Educational Video System ........................................ 156
   Xiaofang Hao, Yulian Zhu, Chunyan Li, and Zan Hui

The Parallel Waves Simulation Based on GPU .......................................................... 160
   Kai Peng, Kai Xie, GuangYue Lu, HuoQuan Yu, Tao Li, and MinFang Peng

Design of Trusted BIOS in UEFI Base on USBKEY .......................................................... 164
   Yin Hu and Haoyong Lv

Research on Network Platform of Ubiquitous Service in Ubiquitous Society: A
Case Study on Archive ...................................................................... 167
   Hai Wang, Qi Hu, and Yang Cai

Document Management of SVG-Based Image by Print Driver ........................................ 171
   Yongxiang Hu

The Application Research on Repository Management of University Digital
Assets .......................................................................................... 175
   Qiao Fu and Run Yuan

Theory of Launch Coordination Based on Shipborne Common-Frame Launch ...................... 178
   Liu Fang, Qiu Zhiming, Ma Yiqing, and Wang Shuman

Progressive Graphical Simplification of Contour Lines Based on Topographical
Feature Constraints ...................................................................... 181
   Zuqiao Yang and Guimei Liu

Multi-parameter Calibration Algorithm Based on 4D Seismic Inversion .......................... 185
   Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

Surgery Prediction and Simulation Based on Correction of Orbital
Hypertelorism ............................................................................. 189
   Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

Based on Research about Intelligent Financial Information System Design ..................... 193
   Chen Liyu

A Tentative Study on Financial Software and Intelligent Financial System ..................... 196
   Chen Liyu

Additivity of Quantum Channel Capacity ...................................................................... 199
   Xianhua Dai and Yanduo Zhang

The Design of NPKI System Based LDAP .................................................................. 202
   Dawei Xu and Xiaohong Hu

Structural Damage Identification Method Based on IMF Model Energy Feature
and BP Neural Network .................................................................. 206
   Zhaowei Sun, Gang Shi, and Xiaoping Liu
The Application of SaaS-Based Cloud Computing in the University Research and Teaching Platform .......................................................... 210
   GaiZhen Yang, Fen Zhou, and Zemin Zhu

Analysis and Research about Cloud Computing Security Protect Policy .......................................................... 214
   Haoyong Lv and Yin Hu

Key Technology Research on the Reproduction of Flight Level Path in Approach and Landing Phase .......................................................... 217
   Wu Jindong and Wei Zhiqiang

Design and Application of Multi-Level Distributed Real-Time Simulation Platform .......................................................... 221
   Yong Chen, Xinyu Yao, Yulin Pan, and Xiaofeng Tang

Research on Intelligent Driving Behavior Based on Cognitive Science and Scene Simulation .......................................................... 226
   Xin Gao, Li Gao, and Gang Dong

A Framework for the Distributed Situation Awareness (DSA) in C2 of NCW .......................................................... 230
   Tianxuguang and Zhuyuanchang

An Optimum Convex Decomposition Algorithm of Simple Polygon Based on Its Adjacent Concave Vertex Connection .......................................................... 235
   Jinhui Dong

Image Filter Design and Implementation Based on API .......................................................... 239
   Yurong Guan and Fen Zhou

The Evaluation of the Self-Propelled Artillery Battle Power Based on Component Analysis Method .......................................................... 242
   Kai You, HongYong Shi, XiaoQuan Li, and XiaoHui Li

GPU-Based Multi-resolution Volume Rendering for Large Seismic Data .......................................................... 245
   Kai Xie, WenMao Yu, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

Hilbert-Huang Transformation of Large Seismic Data Based on GPU .......................................................... 249
   WenMao Yu, Kai Xie, HuoQuan Yu, Peng Wu, Tao Li, and MinFang Peng

The Sound Recognition of Artillery Projectile Shape Based on Least Squares Fuzzy Support Vector Machine .......................................................... 253
   Guo Songyun, Wang Yi, and Zhu Yaohui

MTS Algorithm Based on Vague Set .......................................................... 257
   Peng Zong

Research on Performance Optimization for the Web-Based University Educational Management Information System .......................................................... 261
   Zemin Zhu, Xiao Fei, and Yang Gaizhen

Research on the Design of Test Strategy for WebGame .......................................................... 265
   Zemin Zhu, Xiao Fei, and Fen Zhou
Two Cases of Sports Political Communication .................................................................269
   Lu Huang, Rongfang Cao, and Xinyu Wu

Designing and Implementing of the Webpage Information Extracting Model
   Based on Tags .................................................................................................................273
   Zhang Xu and Dong Yan

Forecast of Yangtze River Water Traffic Accidents Based on GM(1,1) Model ......................276
   Deng Min and Liu Qing

Research of Embedded WebServer Based on CAN-TCP/IP Gateway ....................................279
   Fei Xiao and Zemin Zhu

Review of EMD-Based Image Fusion ................................................................................282
   Xiao Xiaohong and Niu Jiping

Study on Competitive Signals of Enterprises in Organizational Environment ......................286
   Zhang Lu-lu and Zhou Hai-wei

Research on Endpoint Detection for Mongolian Speech Based on Support
   Vector Machine ..............................................................................................................290
   Chomorlig and Zhang Ze

Modeling and Simulation of an Aero Turbojet Engine with GasTurb ...................................295
   Jian-hua Gao and Ying-yun Huang

Computer Control System Teaching Based on a Cooperatively Programmed
   Simulator ......................................................................................................................299
   Zhang Yu and Liu Feng

Study on Image Deformation Simulation Based on ARM Linux and OpenGL
   ES ......................................................................................................................................303
   Xueyan Hu, Zhonglin Xia, and Zhiyong Yuan

The Study of Brand Image Design and Landscape Planning of Large Scale
   Events ..............................................................................................................................307
   Wang Xinxin

Quantitative Evaluation Study of Public Libraries ................................................................311
   Youjun Huang and Dengjie Huang

An Empirical Evaluation Study of Public Libraries Based on Principal
   Component Analysis ......................................................................................................314
   Youjun Huang and Yingquan Yang

Social Network Analysis Application in Bulletin Board Systems ........................................317
   Lianhong Ding and Peng Shi

An Emulation Model of IA-32 Memory Management .........................................................321
   Hai-feng Chen, Lie-hui Jiang, Wei-yu Dong, and Li-xin Wang

Fuzzy PID Control of Mine Main Fan Switchover Aiming at Invariant Ventilation ..............325
   Heng-Qing Ge, Xiao-Ping Ma, Xin-Zhong Wu, Heng-Qing Ge, and Jing Zhang
A General Enterprise Business Protection System Based on USB Key and Virtualization .................................................................329  
Sitong Chen and Hu Chen

A Comprehensive Design Method Based on WDDL and Dynamic Cryptosystem to Resist DPA Attack ....................................................333  
Yuyu Zhang, Guoxi Wang, Yufeng Ma, and Jingwen Li

Application Research of Transaction Properties in Migrating Workflow .................................................................337  
Fei Xiao and Zemin Zhu

The Banner Ads Model: How to Promote Business Online .................................................................................................341  
Yanru Lv

Progress in the Advanced Encryption Standard ..................................................................................................................345  
Zhihua Hu

The Study of E-Commerce Security Protocol ..................................................................................................................349  
Zhihua Hu

Things with the Privacy Protection Technology ..................................................................................................................353  
Zhihua Hu

Computing Science Training Program of Creative Professionals ..........................................................................................357  
Song Ting and Zhihua Hu

The Research of Several Key Question of Internet of Things .............................................................................................362  
Zhihua Hu

A Method for the Signature of Things ..........................................................................................................................366  
Zhihua Hu

Transform Based on Singular Value Solution for Electronic Seal ........................................................................................370  
Sun Jiankun

The Mathematical Model of Course Scheduling and Its Realization Based on Genetic Algorithm ........................................................374  
Fengmei Xie

Design and Implementation of iSCSI Out-of-Band Storage Virtualization ..................................................................................378  
Jiang Guo-song and He Xiao-ling

Research and Implementation of Subscriber Location Register in Media Switch .............................................................................382  
Jiang Guo-song and He Xiao-ling

Understanding and Application of Gauss Theorem in Electrostatic Field ..................................................................................386  
Wang Xiaolan, Wang Feng, Lanzhiqiao, and Chen Rui'an

Design and Implementation of SeDBMS on Embedded System ..............................................................................................389  
Qiu Xiu-qin and Jiang Guo-song

A Self-Learning Structure to Improve the Efficiency of BlueChip Software ..................................................................................393  
Guoxi Wang, Yuyu Zhang, Qiquan Shi, and Xiao Ma
Design of Wireless Communication System Applied for Power Lines Field
Operations ........................................................................................................................................397
Du Li-min, Fang Qiang-hua, and Zhong Hao

Research and Development of Digital Campus Dater Center .........................................................401
Yuan-yuan Lu

Quality of the University Librarians .................................................................................................405
Huang Jing

Corrected Subspace Information Criterion for Least Mean Squares Learning .................................408
Xuejun Zhou

Necessary Conditions of Convergence of Generalized Integral .....................................................411
Cao Xuefeng

The Promotion of Power Series Based on the Mn(c) ..............................................................413
Cao Xuefeng

An Electronic Seal Based on Wavelet Transform Solution .........................................................416
Zhang Chao-yang

The Comparative Study on Software Industry Service System of Cross Strait .........................420
Yongzhong Li

DOS Attack Analysis and Study of New Measures to Prevent .......................................................426
Zhang Chao-yang

Security Architecture of Digital Library Research ....................................................................430
Sun Jiankun

The Large Prime Numbers Generation of RSA Algorithm Based on Genetic
Algorithm ........................................................................................................................................434
Zhang Qing and Hu Zhihua

Key Technologies Research on Credible E-Commerce Platform
of Professional Market ................................................................................................................438
Haoyong Lv and Chaoyang Zhang

Several 3D Graphic Ocean Waves Visual Simulation Based on Visual Basic
and OpenGL ................................................................................................................................442
Zhongqing Cheng, Kenan Ge, and Haibo Jiang

Some Remarks on Convergence in Credibility Distribution of Fuzzy Variable .........................446
Qin Jiang

A Improved Image Edge Detection Algorithm Based on H.264 Intra Prediction ........................450
Yinyuan Wang

A New Image Enhancement Algorithm for PCB Defect Detection ..............................................454
Shu-an Guan and Fenglin Guo
Aspect Oriented Programming Technology and the Strategy of Its Implementation ................................................................. 457

Zhengyan Dong

Computer Simulation of Variation Features of Double-Deck Rectangle Phase Grating .................................................................................. 461

Lu Deng-bo

Frame Design of Preventive Maintenance Management System for Highway Based on SOA .................................................................................. 464

Liu Xuan, Liao Ming-chao, and Liu Lei

Information Filtering Algorithm Based on Feature Vector ........................................................................................................... 468

Ruan Bing

Research of the Machine Vision Based PCB Defect Inspection System ........................................................................................... 472

Fenglin Guo and Shu-an Guan

A Novelty FTP Management Service Method Based on B/S ........................................................................................................... 476

Bing Liu

Application Analysis of Clementine-Based Data Mining Algorithm ........................................................................................................... 479

Lu Ansheng

Activity-Based Costing (ABC) and Its Application in ERP ........................................................................................................... 483

Lu Ansheng

A Data Translation Service in Semantic Grid Environment ........................................................................................................... 487

Jia Yu

A Control Method of Maritime Traffic Risk with Knowledge Hierarchy ........................................................................................... 491

Jing Wang, Lian-xin Jia, Zhi Lin, and Han-jie Wang

A Scalable Model for Service Discovery in P2P Environment ........................................................................................................... 495

Lin Zhang

An Adaptive Genetic Algorithm for Automated Annotation of Point Elements in Numerical Map ........................................................................................................... 499

Hongwu Zhang, Hongcai Feng, and Changhua Liu

An Application of Image Information Measure in Edge Detection ........................................................................................................... 503

Hong Zhou

Design and Implementation of Campus Network Intrusion Detection System ........................................................................................................... 507

Hu Ruipeng

Design and Implementation of Basic Education Information Management System Base on SSH ........................................................................................................... 511

Yang Jianhong

Detection of Chalk Degree of Rice Based on Image Processing ........................................................................................................... 515

Liu Guangrong
Implementation Functions of WebGIS Based on Bitmap ............................................................519
   Li Youping, Wang Daiping, and Long Wenjia

Implementation of Complex Formula Editor Based on Web .......................................................523
   Chen Xia and Wang Gang

Processing Query in P2P XML Data Sources ................................................................................526
   Lin Zhang

Research on Multivariate Grain Information Service Platform ....................................................530
   Liao Ming-chao, Liu Lei, and Liu Xuan

Research on Optimizing Quality of Higher Vocational Education Based
on Principal Components Analysis of Data Mining with a Higher Vocational College as an Example ........................................................................................................534
   Gao Hong-bo and Liu Xuan

Visualization of Syntax Tree Based on VML .................................................................................538
   Chen Chuanxi and Qi Mian

Research on the Information Publication Technology in Integrated
E-Government System .......................................................................................................................542
   Jin Li and Zemin Zhu

Singular Value Decomposition Watermarking Method for Medical Image ..................................546
   Dai Kuobin

Author Index ..................................................................................................................................549
