2011 5th International Conference on Secure Software Integration & Reliability Improvement Companion

(SSIRI – C 2011)

Jeju Island, South Korea
27-29 June 2011
Table of Contents

Message from Steering Committee Chairs...............................................................................................ix
Message from General Chairs....................................................................................................................x
Message from Program Chairs..................................................................................................................xi
Committees.................................................................................................................................................xii
Additional Reviewers.................................................................................................................................xvi

Session 3C: Fast Abstract
Towards Denotational Semantics for Verilog in PVS ..................................................................................1
   Han Zhu, Huibiao Zhu, Si Liu, and Jian Guo

A Method of Analysis and Verification for Safety-Critical Software Based
on Modelling and Testing ..............................................................................................................................3
   Yu Dan and Ma Shilong

Synthesizing SRN Models from System Operations with SysML Diagrams
for Availability Analysis .................................................................................................................................5
   Kumiko Tadano, Jianwen Xiang, Masahiro Kawato, and Yoshiharu Maeno

A Learning Environment for Software Security Education ........................................................................7
   Atsuo Hazeyama and Hiroto Shimizu

Feedback-Directed Test Case Generation Based on UML Activity Diagrams .............................................9
   Xin Chen, Nan Ye, Peng Jiang, Lei Bu, and Xuandong Li
Session 4A: DSDSD Workshop - I

Formal Approaches to Wireless Sensor Networks .................................................................11
   Si Liu, Xiaofeng Wu, Qin Li, Huibiao Zhu, and Qian Wang

Case Study on Installing a Porting Process for Embedded Operating System
in a Small Team ..................................................................................................................19
   DongSeok Cho and DooHwan Bae

Session 4B: Student Doctoral Program

Secure Machine Learning, a Brief Overview .................................................................26
   Xiaofeng Liao, Liping Ding, and Yongji Wang

Verifying the Safety of Xen Security Modules ...............................................................30
   Wei Han, Yeping He, and Liping Ding

Study on Formal Specification of Automatic Train Protection and Block System
for Local Line ...................................................................................................................35
   Guo Xie, Akira Asano, Sei Takahashi, and Hideo Nakamura

Specification and Verification of UML2.0 Sequence Diagrams Using Event
Deterministic Finite Automata .......................................................................................41
   Zhang Chen and Duan Zhenhua

Session 4C: SSCPS Workshop - I

Static Data Race Detection for Interrupt-Driven Embedded Software .........................47
   Rui Chen, Xiangying Guo, Yonghao Duan, Bin Gu, and Mengfei Yang

Approximate Simulation for Metric Hybrid Input/Output Automata ............................53
   Haiyu Pan, Min Zhang, and Yixiang Chen

An Instrumentation Tool for Program Dynamic Analysis in Java .................................60
   Chen Huajie, Zhang Tian, Bu Lei, and Li Xuandong

Session 5A: DSDSD Workshop - II

A Domain-Specific Safety Analysis for Digital Nuclear Plant Protection
Systems .........................................................................................................................68
   Sanghyun Yoon, Jaeyeon Jo, and Junbeom Yoo

Multi-layered Adaptive Monitoring in Service Robots ................................................76
   H. Kim, H. Yoon, Y. Cho, S. Park, and Vijayan Sugumaran
Session 5B: Invited Session

Challenges in Automatic Testing ................................................................................................................84
        Sunghun Kim and Ning Chen

A Reliability Model for Complex Systems .................................................................................................85
        Norm Schneidewind and Mike Hinchey

A Scalability Framework for Reliable Services ............................................................................................95
        Jae Yoo Lee and Soo Dong Kim

Session 5C SSCPS Workshop - II

A Methodology of Model-Based Testing for AADL Flow Latency in CPS ....................................................99
        Yufeng Zhu, Yunwei Dong, Chunyan Ma, and Fan Zhang

        Kenneth Kofi Fletcher and Xiaoqing (Frank) Liu

Approximating Quantified SMT-Solving with SAT .......................................................................................114
        Xianjin Fu, Wanwei Liu, and Jing Li

Session 6A: MVV Workshop - I

Using a DSL and Fine-Grained Model Transformations to Explore the Boundaries of Model Verification ..........................................................120
        M. F. van Amstel, M. G. J. van den Brand, and L. J. P. Engelen

Coping with Complexity of Testing Models for Real-Time Embedded Systems .............................................128
        Ralf Mitsching, Carsten Weise, Dominik Franke, Thomas Gerlitz, and Stefan Kowalewski

Integrating DSL-CBI and NuSMV for Modeling and Verifying Interlocking Systems ....................................136
        Yan Cao, Qiuzi Lu, Tianhua Xu, Tao Tang, Haifeng Wang, and Yongcheng Xu

Session 6B: MBDA Workshop - I

Enhancing Use Cases with Subjective Risk Assessment ..............................................................................144
        O. T. Arogundade, Z. Jin, and X. G. Yang

A UML Model Based White Box Reliability Prediction to Identify Unreliable Components ........................152
        Daeeui Hong, Taewan Gu, and Jongmoon Baik
Session 6C: SSCPS Workshop - III

An Embedded Operating System Design for the Lunar Exploration Rover ................................................. 160
Lei Qiao, Mengfei Yang, Bin Gu, Hua Yang, and Bo Liu

Automatic Regression Test Selection Based on Activity Diagrams .......................................................... 166
Nan Ye, Xin Chen, Peng Jiang, Wenxu Ding, and Xuandong Li

Session 7A: MVV Workshop - II

A Model for Usage-Based Testing of Event-Driven Software ........................................................................ 172
Steffen Herbold, Jens Grabowski, and Stephan Waack

Handling Periodic Properties: Deductive Verification for Quantified Temporal Logic Specifications .................................................. 179
Alexander Bolotov

Session 7B: MBDA Workshop - II

A Modelling Framework to Support Internal Control ................................................................................. 187
Takafumi Komoto, Kenji Taguchi, Haralambos Mouratidis, Nobukazu Yoshioka, and Kokichi Futatsugi

DRiVeR: Diagnosing Runtime Property Violations Based on Dependency Rules .................................................. 194
Yanbin Liu, Ye Yang, Qiusong Yang, and Mingshu Li

A SysML-Based Requirement Supporting Tool for Embedded Software ...................................................... 202
Chih-Hung Chang, Chih-Wei Lu, Kuo-Fong Kao, William C. Chu, Chao-Tung Yang, Nien-Lin Hsueh, Pao-Ann Hsiung, and Chorng-Shiuh Koong

Session 7C: Software Safety in Practice: Industry Reports - Workshop

Invited Talk - Engineering Self-Healing and Self-Improving Systems ........................................................... 207
David Garlan

Author Index ........................................................................................................................................ 208
