2010 Second Brazilian Workshop on Social Simulation

(BWSS 2010)

Sao Paulo, Brazil
24 – 25 October 2010
2010 Second Brazilian Workshop on Social Simulation

BWSS 2010

Table of Contents

Official Photo.............................................................................................................................................................vii
Preface.........................................................................................................................................................................viii
Organizing Committees..................................................................................................................................................x
BWSS 2010 Program Committee.............................................................................................................................xi
BWSS 2008 Program Committee.............................................................................................................................xiii
Additional Reviewers......................................................................................................................................................xiv

Invited Talk

Intra & Inter-network Dynamics, and the "Semantics" of the Links .................................................................1
Cristiano Castelfranchi

Revised Selected Papers of BWSS 2010

Exploring the Emergence of Organized Crime in Rio de Janeiro: An Agent-Based Modeling Approach ..........................................................................................................................7
Bianica Pint, Andrew Crooks, and Armando Geller

On the Operationality of Moral-Sense Decision Making .................................................................................15
Helder Coelho, Paulo Trigo, and Antônio C.R. Costa

Modeling Ethnic Digital Divide Evolution Theories .........................................................................................21
Edilson Vasconcelos de Melo Junior and Jacques Wainer

Analysis of Von Neumann Neighborhoods in Parallel Multi-agent Simulations ........................................27
Diego de Queiroz Macedo and Jaime Simão Sichman

Simulating the Impact of Trust in Coalition Formation: A Preliminary Analysis ...................................33
Luis Gustavo Nardin and Jaime Simão Sichman

Collective Action and Agent-Based Models: Adding Diversity to a Rational Choice Model ..................41
Luciano Mattar and Bruno P.W. Reis
Revised Selected Papers of BWSS 2008

A Multi-agent System for Dynamic Path Planning ..........................................................47
    Marcelo Cardoso Silva, Ana Cristina Bicharra Garcia, and Aura Conci

Simulating Urban Growth and Residential Segregation through Agent-Based Modeling ..........................................................52
    Raian Vargas Maretto, Talita Oliveira Assis, and André Augusto Gavlik

From Input-Output Matrixes to Agent-Based Models: A Case Study on Carbon Credits in a Local Economy ..........................................................58
    Pedro Ribeiro de Andrade, Antonio Miguel Vieira Monteiro, and Gilberto Camara

On the Problem of Recognizing and Learning Observable Social Exchange Strategies in Open Societies ..........................................................66
    Graçaliz P. Dimuro, Antônio C.R. Costa, and Luciano V. Gonçalves

An Interactional Characterization of Social Functions ..........................................................74
    Antônio C.R. Costa and Graçaliz P. Dimuro

Simulation of Electrical Distributed Energy Resources for Electrical Vehicles Charging Process Strategy ..........................................................82
    João Carlos Ferreira, Paulo Trigo, Alberto Rodrigues da Silva, Helder Coelho, and João L. Afonso

Simulating a Multi-agent Electricity Market ..........................................................90
    Paulo Trigo and Helder Coelho

An Analysis of Two Regulation Mechanisms for Personality-Based Social Exchange Processes ..........................................................96
    Diego Rodrigues Pereira, Luciano V. Gonçalves, Graçaliz P. Dimuro, and Antônio C.R. Costa

Simulating Argumentation about Exchange Values in Multi-agent Interactions ..........................................................103
    Márcia Háfele Islabão Franco, Antônio C.R. Costa, and Helder Coelho

Entities and Relations for Agent-Based Modelling of Complex Spatial Systems ..........................................................111
    Pedro Ribeiro de Andrade, Antonio Miguel Vieira Monteiro, and Gilberto Camara

Equation-Based Models as Formal Specifications of Agent-Based Models for Social Simulation: Preliminary Issues ..........................................................119
    Antônio C.R. Costa, Fernanda M. Jeannes, and Ulisses A. Cava

Rehearsing Policies for GHGs Emission Control ..........................................................127
    João Balsa, Luis Antunes, Helder Coelho, and Luis Moniz

Author Index ..........................................................131
