2011 Forum on Specification and Design Languages

(FDL 2011)

Oldenburg, Germany
13-15 September 2011
Table of Contents

FDL 2011

Table of Contents .................................................................................................................. 3
Welcome ............................................................................................................................... 5
General Chair ...................................................................................................................... 5
Keynote Speakers .............................................................................................................. 6
Technical Area Chairs .................................................................................................... 7
Program Committee ......................................................................................................... 8
Technical Area Overview ................................................................................................. 9
FDL Sponsors .................................................................................................................... 10

Session 1 – EAMS, Part 1: Design and Optimisation of Heterogeneous Systems .......... 11
Designing Low-Power Wireless Sensor Networks .......................................................... 12
Joseph Wenninger, Javier Moreno, Jan Haase, and Christoph Grimm
(Vienna University of Technology)

Behavioral Modeling of a CMOS Video Sensor Platform using SystemC AMS / TLM .......... 18
Fabio Cenni, Serge Scotti (ST Microelectronics) and Emmanuel Simeu (TIMA Laboratory)

SystemC-AMS Model of a Dynamic Large-Scale Satellite-Based AIS-Like Network .......... 24
Mu Zhou and Rene Van Leuken (Delft University of Technology)

Session 2 – EAMS, part 2: Circuit Modelling and Design .............................................. 32
Abstract Modeling and Estimation of a High Performance Tobey's PGA ......................... 33
Sumit Adhikari, Christoph Grimm and Jan Haase (Vienna University of Technology)

VHDL-AMS Model of a Dual-Gate Graphene FET ....................................................... 39
Ime Umoh and Tom Kazmierski (University of Southampton)

A Machine-Readable Specification of Analog Circuits for Integration into a Validation Flow ......................................................... 44
Mingyu Ma, Lars Hedrich and Christian Sporrer (University of Frankfurt)

Session 3 – ABD, part 1: Assertion-Based Technology for Verification and Synthesis ...... 52
Improvement of Assertion-Based Verification through the Generation of Proper Test Sequences ......................................................... 53
Laurence Pierre and Laila Damri (TIMA - CNRS-GrenobleINP-UJF)

Does Asynchronous Technology Bring Robustness in Synchronous Circuit Monitoring ................................................................. 61
Alexandre Porcher, Katell Morin-Allory, Laurent Fesquet (TIMA),
Alejandro Chagoya (CIME Nanotech)

Assertion Support in High-Level Synthesis Design Flow ................................................ 67
Aurélien Riban, Bertrand Le Gal, Christophe Jego, and Dominique Dallet (University of Bordeaux)

Co-Session 3 – LBSD, part 1: Syntactic Sugar? - Language Design and Semantics ........ 75
Bringing C++ Productivity to VHDL World: from Language Definition to a Case Study ................................................................. 76
Ivan Shcherbakov, Christian Weis and Norbert When (TU Kaiserslautern)

A Metamodel and Semantics for Transaction Level Modeling ....................................... 83
Rauf Salimi Khaligh and Martin Radetzki (University of Stuttgart)

Schizophrenia and Causality in the Context of Refined Clocks (short presentation) ........... 91
Mike Gemünde, Jens Brandt and Klaus Schneider (University of Kaiserslautern)

A Generic Execution Model for Efficient Performance Evaluation of System Architectures (short presentation) .................................. 99
Sebastien Le Nours, Anthony Barreteau and Olivier Pasquier (University of Nantes)
# Table of Contents

## Session 4 – UMES, part 1: UML Based Validation, Verification, and Testing
- Integrated Model-Based Approach and Test Framework for Embedded Systems
  - Padma Iyenghar and Elke Pulvermüller (University of Osnabueck)
  - Clemens Westerkamp and Juergen Wuebbelmann (UAS, Osnabueck)
- A UML Based Framework for Efficient Validation of TLM 2 Models
  - Vaibhav Jain, Anshul Kumarand, and Preeti Ranjan Panda (Indian Institute of Technology Delhi)

## Session 5 – UMES, part 2: MARTE at Work & Standardization Trends
- A Framework for the Generation from UML/MARTE Models of IP-XACT HW Platform
  - Fernando Herrera and Eugenio Villar (University of Cantabria)
  - Gilberto Ochoa, El-Bay Bourennane, Ouassila Labbaniand, Kamel Messaoudi (LE2i Laboratory, Université de Bourgogne)
- Efficient Implementation and Abstraction of SystemC Data Types for Fast Simulation
  - Nicola Bombieri, Franco Fummi, Valerio Guarnieri, Francesco Stefanni, and Sara Vinco (University of Verona)
- A Case Study on Message-Based Discrete Event Simulation for Transaction Level Modeling
  - Bastian Haetzer and Martin Radetzki (University of Stuttgart)
- Impact Simulation of Changes to Development Processes: An ESL Case Study
  - Frank Poppen, Roland Koppe, Kim Grüttnner (OFFIS)
  - Axel Hahn (University of Oldenburg)

## Session 6 – LBSD, part 2: LBSD 2: Hurry up! - Speedy Simulation Techniques
- Efficient Implementation and Abstraction of SystemC Data Types for Fast Simulation
  - Nicola Bombieri, Franco Fummi, Valerio Guarnieri, Francesco Stefanni, and Sara Vinco (University of Verona)
- A Case Study on Message-Based Discrete Event Simulation for Transaction Level Modeling
  - Bastian Haetzer and Martin Radetzki (University of Stuttgart)
- Impact Simulation of Changes to Development Processes: An ESL Case Study
  - Frank Poppen, Roland Koppe, Kim Grüttnner (OFFIS)
  - Axel Hahn (University of Oldenburg)

## Session 7 – LBSD, part 4: Evaluate This! - System-Level Modelling and Evaluation
- ESL Power and Performance Estimation for Heterogeneous MPSoCs Using SystemC
  - Martin Streubühr, Rafael Rosales, Jürgen Teich (University of Erlangen-Nuremberg), Ralph Hasholzner (Intel Mobile Communications) and Christian Haubelt (University of Rostock)
- Analyzing Dependability Measures at the Electronic System Level
  - Marc Michael, Daniel Grosse and Rolf Drechsler (University of Bremen)
