2011 9th International Conference on Software Engineering Research, Management and Applications

(SERA 2011)

Baltimore, Maryland, USA
10 – 12 August 2011
# Table of Contents

Message from Conference Chair ................................................................. ix  
Message from Program Co-chairs .............................................................. x  
Organizing Committee ............................................................................... xi  
Program Committee ................................................................................ xii  
Reviewers ................................................................................................... xv  
Keynote Abstracts ................................................................................... xviii

---

## Case Studies in Software Engineering

- Introducing Support for Embedded and Real-Time Devices into Existing Hierarchical Component System: Lessons Learned ................................................................. 3  
  
  *Tomáš Pop, Jaroslav Keznikl, Petr Hošek, Michal Malohlava, Tomáš Bures, and Petr Hnětynka*

- Requirement Development Life Cycle: The Industry Practices ................................................................. 12  
  
  *Kalimullah Khan, P.V.V. Kumar, Azeem Ahmad, Tabassum Riaz, Waheed Anwer, M. Suleman, Omer Ajmal, Tenvir Ali, and A.V.K. Chaitanya*

- Requirements Engineering Current Practice and Capability in Small and Medium Software Development Enterprises in New Zealand ................................................................. 17  
  
  *Alison Talbot and Andy Connor*

- The Global Force Management Data Initiative: Implementing an Enterprise Information Exchange Data Model ................................................................. 26  
  
  *Frederick S. Brundick and Josh Dehlinger*
Data Mining and Knowledge Discovery

Enhancement of Components in ICA for Face Recognition ..................................................33
  Jiajin Lei, Chao Lu, and Zhenkuan Pan

Mining Software Metrics from Jazz ..........................................................................................39
  Jacqui Finlay, Andy Connor, and Russel Pears

Towards Automatic Generation of Ontology-Based Antipattern Bayesian Network Models ..........................................................46
  Dimitrios Settas, Antonio Cerone, and Stefan Fenz

The General Variation Models of Additive and Multiplicative Noise Removal of Color Images and Their Split Bregman Algorithms .................................................................54
  Zhenkuan Pan, Cuiping Wang, Weibo Wei, and Chao Lu

A Rule-Based Fuzzy Diagnostics Decision Support System for Tuberculosis ..................................................60
  April Rose C. Semogan, Bobby D. Gerardo, Bartolome T. Tanguilig III, Joel T. de Castro, and Louie F. Cervantes

Data Extraction Using Preprocessing Compression Based on LZW to Improve DB Performance ..................................................64
  Bartolome T. Tanguilig III, Ariel M. Sison, Bobby D. Gerardo, and Yung-Cheol Byun

Predicting Faculty Performance Using Regression Model in Data Mining ..................................................68
  Raymond S. Bermudez, Joseph O. Manalang, Bobby D. Gerardo, and Bartolome T. Tanguilig III

Probabilistic Petri Net and its Logical Semantics ........................................................................73
  Yang Liu, Huaikou Miao, Hongwei Zeng, and Zhuang Li

HCI and Usability

Evaluating Usability of Three Authentication Methods in Web-Based Application ..................................................81
  Yao Ma and Jinjuan Feng

Architectural Design and Development of a Hybrid Robotics Control System ..................................................89
  Eric Avery and Darish Davani

Engineering a Cognitive Robotics Platform ..................................................................................97
  Frederick Ackers and Darush Davani

Evaluation of Load Balance Algorithms ..................................................................................104
  Hamid Mcheick, Ziad Rajih Mohammed, and Abbass Lakiss
Mobile Computing and Networks

An Improved Data Encryption Standard to Secure Data Using Smart Cards ...........................................113
   Ariel M. Sison, Bartolome T. Tanguilig III, Bobby D. Gerardo, and Yung-Cheol Byun

Increasing SEC Effectiveness through Mobile and Web Applications ......................................................119
   Craig Offutt and David Hamilton

Ontology-Based Negotiation Model ........................................................................................................125
   Jangwon Kim, Sukhoon Lee, Dongwon Jeong, and Doo-Kwon Baik

Requirements Engineering

Tool to Support Constructing, Analyzing, Comparing and Composing Models ........................................133
   Hasan H. Sayani

Merging Multi-view Feature Models by Local Rules .....................................................................................140
   Elçin Atilgan Aydin, Halit Oguztüzün, Ali Hikmet Dogru, and Ahmet Serkan Karataş

UseCaseDiff: An Algorithm for Differencing Use Case Models .................................................................148
   Mohamed El-Attar

Business Architecture Elicitation for Enterprise Architecture: VMOSt versus Conventional Strategy Capture ..........................................................................................................................153
   Nicholas Rosasco and Josh Dehlinger

Quantifying the Impact of Different Non-functional Requirements and Problem Domains on Software Effort Estimation ........................................................................................................158
   Rolan Abdukalykov, Ishrar Hussain, Mohamad Kassab, and Olga Ormandjieva

Security and Forensics

A Hybrid Intelligence/Multi-agent System Approach for Mining Information Assurance Data ..........................................................169
   Charles A. Fowler and Robert J. Hammell II

On Testing of Implementation Correctness of Protocol Based Intrusion Detection Systems ..........................................................171
   Anthony Chung

Social Networking and E-Learning

Adding Organizational Value to SEC Using Social Computing Tools .........................................................177
   Meghann Ward

A Model of Smart Learning System Based on Elastic Computing .............................................................184
   Svetlana Kim and Yong Ik Yoon

Death, Social Networks and Virtual Worlds: A Look Into the Digital Afterlife ........................................186
   James Braman, Alfreda Dudley, and Giovanni Vincenti
SCORM Based LMS Model Design Using Hybrid Base and Hybrid Reasoning .................................193
Gu-Beom Jeong, Kyung-Ok Park, Yeong-Tae Song, and Raid Alhazme

Software Process Models

Agile Model Driven Development: An Intelligent Compromise .................................................................197
Reza Matinnejad

Quality Attribute Driven Agile Development .................................................................................................203
Sanghoon Jeon, Myungjin Han, Eunseok Lee, and Keun Lee

A Modeling Approach for Business Processes Based on Variability ..............................................................211
Joonseok Park and Keunhyuk Yeom

Analysis of Software Product Line Architecture Representation Mechanisms ..................................................219
Hwi Ahn and Sungwon Kang

Case Study on Incremental Software Development .........................................................................................227
Dapeng Liu, Shaochun Xu, and Wencai Du

Scope as a Leading Indicator for Managing Software Development ...............................................................235
Joseph M. McQuighan and Robert J. Hammell II

Author Index ..........................................................................................................................................................242
