2011 IEEE 11th International Conference on Bioinformatics and Bioengineering

(BIBE 2011)

Taichung, Taiwan
24 – 26 October 2011
# Table of Contents

**Message from the Conference Co-chairs** .................................................................................................................. x

**Message from the Program Co-chairs** ....................................................................................................................... xi

**Conference Committees** .............................................................................................................................................. xii

**Reviewers** ...................................................................................................................................................................... xv

## Session BIBE-I: Molecular Interaction and Network Biology

A Heuristic Algorithm for Detecting Intercellular Interactions .................................................................................. 1  
_Fahim Mohammad, Robert M. Flight, Benjamin J. Harrison, Jeffrey C. Petruska, and Eric C. Rouchka_

Gene Networks Validation based on Metabolic Pathways .......................................................................................... 9  
_Francisco Gómez–Vela, Norberto Díaz–Díaz, and Jesús Aguilar–Ruiz_

A System to Discover Correlations within a Biological Pathway between the Expression Levels of Genes ..................... 15  
_Li-Ching Wu, Cheng-Wei Chang, Tsung-Ming Chao, Rong-Hwei Yeh, and Jorng-Tzong Horng_

Downstream Exploration of DNA-Bound Searching Proteins: A Diffusion-Reaction Model ........................................ 21  
_Michael L. Mayo, Edward J. Perkins, and Preetam Ghosh_

A Prediction of mRNA Polyadenylation Sites in Human Genes ................................................................................. 27  
_Jorng-Tzong Horng, Li-Ching Wu, Shun-Kai Liu, Cheng-Wei Chang, Tsung-Ming Chao, Rong-Hwei Yeh, and Kuang-Fu Cheng_

Investigating Cancer-related Proteins Specific Domain Interactions and Differential Protein Interactions Caused by Alternative Splicing ............................................................................................................. 33  
_Yu-Liang Lee, Jie-Wei Weng, Wen-Chin Chiang, Yi-Wen Lin, Ka-Lok Ng, Jeffrey Jing-Pha Tsai, and Chi-Ying Huang_

## Session BIBE-II: Biomedical Signal Processing and Device

Epileptic Seizure Detection for Multichannel EEG Signals with Support Vector Machines ........................................... 39  
_Chat-Ping Shen, Chih-Min Chan, Feng-Sheng Lin, Ming-Jang Chiu, Jeng-Wei Lin, Jui-Hung Kao, Chung-Ping Chen, and Feipei Lai_

Three-dimensional Vision-based Nail-fold Morphological and Hemodynamic Analysis .............................................. 44  
_Lun-chien Lo, John Y. Chiang, and Yu-shan Cai_
Object Relational Programming of Biomedical Images ................................................................. 52
  Han C.W. Hsiao, Rouh-Mei Hu, Wei-Liang Tai, Rong-Ming Chen, and Jeffrey J.P. Tsai

Bio-Sensing and Monitor System Design by Integrating Replaceable Micro Array
Probes and Amplifier with an Wireless Active RFID Tag .............................................................. 58
  Po-Wei Lin and Jium-Ming Lin

Session BIBE-III: Microarray Data Analysis and Biomarker

Gene Expression Data Classification Using Locality Preserving Projections ................................... 66
  Houqin Bian and Ronal Chung

Gene Expression and Pathway Analysis of Quiescent CD8+ T Cells from Liver Cancer, Liver Sinusoid and Peripheral Blood - Study on Toxicogenomics and Prevention Targeting ................................................................. 72
  Zhaohui Wang, Hongliang Hu, Jie Zheng, and Biaoru Li

A Novel Recursive Feature Subset Selection Algorithm ................................................................. 78
  Amirali Jafarian, Alioune Ngom, and Luis Rueda

Rough-Fuzzy Hybrid Approach for Identification of Bio-markers and Classification on Alzheimer’s Disease Data ................................................................. 84
  ChangSu Lee, Chiou-Peng Lam, and Martin Masek

An Improved Natural PCR-RFLP Primer Design Method ............................................................. 92
  Li-Yeh Chuang, Yu-Da Lin, Hsueh-Wei Chang, and Cheng-Hong Yang

Session BIBE-IV: Biomedical Signal, Ergonomic Design and Biomaterial

A Computational Method for Tracking and Analysing Dynamic Phenotypes of Individual Macromolecules ................................................................................................................................. 100
  Chinnachart Vootita, Kanita Tanthanawigrai, Phornphop Naiyanetr, and Danai Laksameethanasan

Applying Brain Waves to Face Recognition ................................................................................. 106
  Koun-Tem Sun, Min-Chi Chen, and Tzu-Wei Huang

Ergonomic Designs Based on Musculoskeletal Models .................................................................... 112
  Chun-Ming Chang and Jeffrey J.P. Tsai

The Development of Foot Orthotics Using Shape Memory Alloy for Preventing Falls .................. 117
  Yuki Shimizu and Masanori Kobayashi

Development of Artificial Intra-articular Polyethylene Glycol (PEG) Lubricant for Survival of Total Knee Joint Patient (Preliminary Study for Clinical Application) ........................................... 121
  Yoshiyuki Honda, Masanori Kobayashi, Kazuaki Matsumura, Naoki Nakajima, and Suong-hyu Hyon

The Effect of Low-intensive Pulsed Ultrasound Waving on Hydroxyapatite in Simulated Body Fluid ................................................................................................................................. 125
  Hajime Mukai and Masanori Kobayashi
Session BIBE-V: Healthcare System and Medical Informatics

An Observation on Circulatory System of Vegetative State Patient with Music Therapy .................................................................129
Yaw-Chern Lee, Hui-Min Wang, Hui-Ya Chiang, and Sheng-Chieh Huang

A Mobile Biomedical Device by Novel Antenna Technology for Cloud Computing Resource toward Pervasive Healthcare ..................................................................................................................133
Ke-Ren Chen, Yu-Lun Lin, and Mu-Sheng Huang

U-healthcare System Deployment ..............................................................................................................................137
Shih-Ching Yeh, Wu-Yuin Hwang, Tzu-Chuan Huang, and Wen-Kang Liu

Virtual Reality System Specifications for Pain Management Therapy ...............................................................................................143
Hatim Aboalsamh, Hind Al Hashim, Faten Alrashed, and Nada Alkhamis

Parallel Association Rule Mining for Medical Applications .................................................................................................148
G.G. Zhang, C.Z. Xu, Philip C-Y Sheu, and Hiroshi Yamaguchi

Clinical Characteristics Change and the Heart Rate Variability of Subjects with Metabolic Syndrome in the Weight Loss Program ........................................................................................................155
Ching-I Lin, Wan-Teng Lin, Ming-Jen Fan, Ming-Chang Lin, Chang-Hai Tsai, Fiuv-Jen Tsai, Wei-Jen Ting, Chih-Yang Huang, and Ying-Lan Tsai

Session BIBE-VI: Genome Sequence Analysis and Evolution

The Length Evolution of 5' Untranslated Regions - The Stochastic Model Revisited .................................................................162
Chun-Hsi Chen, Hsuan-Yu Lin, Chia-Lin Pan, and Feng-Chi Chen

Evolutional Dependency Parse Trees for Biological Relation Extraction ...............................................................................................167
Hung-Yu Kao, Yi-Tsung Tang, and Jian-Fu Wang

Efficient Algorithms for the Longest Common Subsequence Problem with Sequential Substring Constraints ..........................................................................................................................175
Chiou-Ting Tseng, Chang-Biau Yang, and Hsing-Yen Ann

Reconstruction of histone modification network from next-generation sequencing data .................................................................181
Ngoc Tu Le and Tu Bao Ho

Particle Swarm Optimization with Extremal Optimization for the Prediction of CpG Islands in the Mammal Genome ..........................................................................................................................189
Li-Yeh Chuang, Ming-Cheng Lin, and Cheng-Hong Yang

Session BIBE-VII: Drug Design and Agriculture Biotechnology

Molecular Modeling Studies of AmpR Mediated AmpC β-Lactamase Repression ..................................................................................195
David A. Hecht, Charles C.N. Wang, Rou-Mei Hu, and Jeffrey J.P. Tsai

Exploration of Chemical Space by Molecular Morphing .................................................................................................201
David Hoksza and Daniel Svozil
Predication the Suppressing Human Oral Cancer Cell Line by Curcumin through the Research of Fas Receptor

Po-Yuan Chen, Yu-Chi Wu, Tzu-Hurng Cheng, Tzu-Ching Shih, Cing-Tsan Tsai, Chieh-Hsi Wu, Tzu-Yu Hua, Yen-Yu Huang, Chia-Hsing Cheng, and Ming-Jen Fan

The Application of Molecular Markers to Identify Edible Fungi: A Case Study of Tremella Fuciformis

Jing-Gung Chung, Jeffrey J.P. Tsai, Chien-Yih Lin, Yang-Chia Shih, Jin-Shih Chen, and Ming-Jen Fan

Ming-Jen Fan, Su-May Yu, Tzu-Chieh Hung, Wei-Quan Chen, Yue-Ie Hsing, Hsin-Li Lin, Chia-Cheng Liu, Jing-Gung Chung, and Jeffrey J.P. Tsai

Session BIBE-VIII: Biological Modeling and DNA Computing

Simulation of Bacterial Chemotaxis by the Random Run and Tumble Model

Charles C.N. Wang, Ka-Lok Ng, Yu-Ching Chen, Phillip C.Y. Sheu, and Jeffrey J.P. Tsai

Immune Response and Memory: Perspectives on Stability of Cyclic Idiotypic Network

Chung-Ming Ou and C.R. Ou

Correlating Simulation and Experimental Data of Traction and Cell Speed as Functions of Substrate Stiffness

Henry C. Wong and William C. Tang

Photoelectric DNA-Detection Platform with Assembled Magnetic Beads

Fei Li and Jin Xu

Repetition Coding as an Effective Error Correction Code for Information Encoded in DNA

David Haughton and Félix Balado

Realization of Reversible Logic in DNA Computing

Session BIBE-PI: Applications of Machine Learning Method, Bioengineering Device and Signal Processing

Identifying Hub Proteins and Their Essentiality from Protein-protein Interaction Network

Sakhinah Abu Bakar, Javid Taheri, and Albert Y. Zomaya

A Comparison Study of Virus Classification by Genome Sequences

Jing-Doo Wang

Constructing Suffix Tree of Endogenous Feature on FPGA for High-Performance Identification of DNA Signatures

Lin Feng, Angela Jean, Chong Poh Leng, and Lai Danbo
Interval Trees for Detection of Overlapping Genetic Entities ................................................. 278
   Fahim Mohammad, Robert M. Flight, Benjamin J. Harrison, Jeffrey C. Petruska,
   and Eric C. Rouchka

Design of Synthetic Genetic Oscillators Based on RSGA ..................................................... 282
   Yen-Chang Chang and Chun-Liang Lin

Classification and Screening of Recognition Protein Complexes with Genetic
Programming .......................................................................................................................... 287
   Huang-Cheng Kuo and Jia-Hao Li

Analysis of SNP Interaction Combinations to Determine Breast Cancer Risk with PSO ............... 291
   Li-Yeh Chuang, Ming-Cheng Lin, Hsueh-Wei Chang, and Cheng-Hong Yang

Computational Tools for SNP Interactions - How Good Are They? .......................................... 295
   Flavia Roberta Barbosa de Araujo and Katia Silva Guimaraes

GERC: Tree Based Clustering for Gene Expression Data .......................................................... 299
   H.A. Ahmed, P. Mahanta, D.K. Bhattacharyya, and Jugal K. Kalita

The Development of the Dry Cleaning and Surface Treatment All-in-one Equipment
Used for Biochip ...................................................................................................................... 303
   Chi-Sang Lau and Fun-jou Chen

Effects of Poly-L-Ornithine and Fibronectin Coatings for Human Melanocyte Cell
Illuminating Experiments ......................................................................................................... 307
   Chung-Jen Ou, I-Shen Ching, and Chung-Ming Ou

Design of Chinese Spelling System Based on ERP ................................................................. 310
   Koun-Tem Sun, Tzu-Wei Huang, and Min-Chi Chen

Analysis of Brainwave Characteristic Frequency Bands for Learning ...................................... 314
   Fu-Chien Kao, Han-Chien Hsieh, and Wei-Te Li

Principal Component Analysis Method for Detection and Classification of ECG Beat .................. 318
   Yun-Chi Yeh, Tung-Chien Chiang, and Hong-Jhih Lin

Segmentation of the Pectoral Muscle Boundary in Breast MR Images .................................... 323
   Myungun Lee, Yanjuan Chen, Soohyung Kim, and Jonghyo Kim

Towards Continuous Electrocardiogram Monitoring Based on Rules and Ontologies .................. 327
   Tanatorn Tanantong, Ekawit Nantajeewarawat, and Surapa Thiemjarus

Author Index ............................................................................................................................. 331
