2011 Workshop-School on Theoretical Computer Science

(WEIT 2011)

Pelotas, Brazil
24-26 August 2011
# 2011 Workshop-School on Theoretical Computer Science

## WEIT 2011

### Table of Contents

- Preface ........................................................................................................................................................viii
- Organizing Committee ...........................................................................................................................................x
- Program Committee ..............................................................................................................................................xi
- Additional Reviewers ..........................................................................................................................................xiii
- Best Paper Awards ..............................................................................................................................................xiv

### Invited Talks

- On Interval Fuzzy Numbers .................................................................................................................................3
  *Graçaliz Pereira Dimuro*

- Model Checking ...................................................................................................................................................9
  *Ana Paula Lüdtke Ferreira*

- Specification and Analysis of Concurrent Systems Using Object-Based Graph Grammars ...............................15
  *Leila Ribeiro and Fernando Luis Dotti*

- Theoretical Computing Machines: A Systemic Approach ..................................................................................21
  *Antônio Carlos da Rocha Costa*

### Revised Selected Papers

- On Fuzzy Probabilities in Bayesian Games ........................................................................................................25
  *Tiago da Cruz Asmus and Graçaliz Pereira Dimuro*

- A Comparison between K-Means, FCM and ckMeans Algorithms ........................................................................32
  *Rogério R. de Vargas, Benjamín René Callejas Bedregal, and Eduardo Silva Palmeira*

- On Vector and Matrices of Fuzzy Numbers .........................................................................................................39
  *Jorge Luis B. Ribes, Graçaliz Pereira Dimuro, and Marilton Sanchotene de Aguiar*

- Interval-Valued Intuitionistic Fuzzy Implications ...............................................................................................46
  *Lidiane Visintin, Renata Hax Sander Reiser, and Benjamín René Callejas Bedregal*
Conjugate and Dual Constructions on Interval Functions ................................................................. 53
  Gesner Antonio Azevedo dos Reis, Lidiane Visintin, Renata Hax Sander Reiser, and Benjamín René Callejas Bedregal

Measuring the Quality of Internet Shopping: An Experiment Using Fuzzy Logic ........................................ 60
  Leonardo Martins Rodrigues and Graçaliz Pereira Dimuro

Hand Skill Programming: Using Fuzzy Sets to Program Topobo Kinects
Memory Devices ........................................................................................................................................... 67
  Mateus Madail Santin, Silvia da Silva Costa Botelho, Graçaliz Pereira Dimuro, and Celso Luiz Lopes Rodrigues

A Simulation Model for Process-Centered Software Engineering Environments
Using Sensitivity Analysis ............................................................................................................................. 74
  Juliano Dertzbacher, Abraham L.R. de Sousa, and Daltro J. Nunes

Using Graph Grammars to Develop Embedded Systems Based on UML
Models .......................................................................................................................................................... 81
  Nicolas N. Bisi, Vinicius Pazzini, Luciana Foss, Simone André da Costa Cavalheiro, Lisane B. de Brisolara, and Flávio Rech Wagner

Graph Grammars: A Comparison between Verification Methods ............................................................. 88
  André Moura de Mello, Luiz Carlos Lemos Junior, Luciana Foss, and Simone André da Costa Cavalheiro

A Graph Grammar to Transform DAGs into Graphs Describing Multithreaded Programs .......................................................... 95
  Cícero Augusto de S. Camargo, Gerson Geraldo H. Cavalheiro, Luciana Foss, and Simone André da Costa Cavalheiro

Theoretical and Experimental Analysis of the Jurema Branch-and-Bound Method .............................................. 102
  Felipe Martins Müller, Guilherme Dhein, and Olinto César Bassi de Araújo

Mixed Integer Linear Programming Models to Solve the Shisen-Sho Puzzle ............................................. 108
  R.S. Trindade, Guilherme Dhein, Felipe Martins Müller, and Olinto César Bassi de Araújo

Applications of Numerical Methods with Linear Complexity in Flood Forecasting in Rivers .................................................. 113
  Alice Finger and Aline Loreto

Modeling Uncertainty and Decision Making in Strategic Interactions in Multiagent Systems: An Overview .................................................. 120
  Stephanie Loi Brião, Graçaliz Pereira Dimuro, and Antônio Carlos da Rocha Costa

Using RSL for the Formal Specification of PopOrg-based Multiagent Systems Organizations ............................................ 127
  Raquel de Miranda Barbosa and Antônio Carlos da Rocha Costa
A Fuzzy-BDI Agent Model for Exchanges of Non-economic Services, Based on the Social Exchange Theory .................................................................134
  Giovani Parente Farias, Graçaliz Pereira Dimuro,
  and Antônio Carlos da Rocha Costa

Hybrid Intelligent Systems: A Study on Genetic Algorithms and Fuzzy Approaches ..........................................................................................................................138
  Luís Felipe K. de Macedo, Graçaliz Pereira Dimuro,
  and Marilton Sanchotene de Aguiar

Cultural Algorithms: A Study of Concepts and Approaches .................................................................145
  Murian dos Reis Ribeiro and Marilton Sanchotene de Aguiar

Epistemic Relativism in Agent Societies: A Preliminary Semantic Model .........................................149
  Antônio Carlos da Rocha Costa

Towards Developmental Turing Machines ...........................................................................................156
  Simone André da Costa Cavalheiro, Antônio Carlos da Rocha Costa,
  and Graçaliz Pereira Dimuro

Author Index ............................................................................................................................................163
