2011 IEEE 22nd International Symposium on Software Reliability Engineering

(ISSRE 2011)

Hiroshima, Japan
29 November – 2 December 2011
2011 22nd IEEE International Symposium on Software Reliability Engineering

ISSRE 2011

Table of Contents

Message from the General Chair.................................................................viii
A Word from the Program Committee Chair ..............................................ix
Organizing Committee.................................................................................x
Sponsors ..................................................................................................xvii

Session 1: Software Security

Using Behavioral Profiles to Detect Software Flaws in Network Servers .................................................................1
  João Antunes and Nuno FuenteCilla Neves

Diversity for Security: A Study with Off-the-Shelf AntiVirus Engines.................................................................11
  Peter Bishop, Robin Bloomfield, Ilir Gashi, and Vladimir Stankovic

Server Side Detection of Content Sniffing Attacks .................................................................20
  Anton Barua, Hossain Shahrir, and Mohammad Zulkernine

Session 2: Software Safety

A Model-Driven Engineering Approach to Support the Verification of Compliance to Safety Standards .................................................................30
  Rajwinder Kaur Panesar-Walawage, Mehrdad Sabetzadeh, and Lionel Briand

The Early Identification of Detector Locations in Dependable Software .................................................................40
  Arshad Jhumka and Matthew Leeke

Experiences with Assurance Cases for Spacecraft Safing .................................................................50
  Elisabeth A Nguyen and Alex G. Ellis

Session 3: Data Driven Software Reliability Studies

Mining Cause-Effect-Chains from Version Histories .................................................................60
  Kim Herzig and Andreas Zeller

Statistical Evaluation of Complex Input-Output Transformations .................................................................70
  Gang Shu, Zhuofu Bai, and Andy Podgurski
Uncertainty Propagation through Software Dependability Models

Kesari Mishra and Kishor S. Trivedi

Feature Interaction Faults Revisited: An Exploratory Study

Brady J. Garvin and Myra B. Cohen

Session 4: Unit Testing

JavaScript Errors in the Wild: An Empirical Study

Frolin S. Ocariza Jr., Karthik Pattabiraman, and Benjamin Zorn

Efficiently Running Test Suites Using Abstract Undo Operations

Shadi Abdul Khalek and Sarfraz Khurshid

PACOGEN: Automatic Generation of Pairwise Test Configurations from Feature Models

Aymeric Hervieu, Benoit Baudry, and Arnaud Gotlieb

Adaptive Regression Testing Strategy: An Empirical Study

Md. Junaid Arafeen and Hyunsook Do

Session 5: System Testing

Impact Analysis of Configuration Changes for Test Case Selection

Xiao Qu, Mithun Acharya, and Brian Robinson

A Hybrid Directed Test Suite Augmentation Technique

Zhihong Xu, Yunho Kim, Moonzoo Kim, and Gregg Rothermel

LOFT: Redundant Synchronization Event Removal for Data Race Detection

Yan Cai and W.K. Chan

An Empirical Study of JUnit Test-Suite Reduction

Lingming Zhang, Darko Marinov, Lu Zhang, and Sarfraz Khurshid

Session 6: Formal Development and Analysis

Rigorous Development of Dependable Systems Using Fault Tolerance Views

Ilya Lopatkin, Alexei Illiasov, and Alexander Romanovsky

PAT 3: An Extensible Architecture for Building Multi-domain Model Checkers

Yang Liu, Jun Sun, and Jin Song Dong

Safety Analysis of Trampoline OS Using Model Checking: An Experience Report

Yunja Choi

Session 7: Software and System Reliability

WSPred: A Time-Aware Personalized QoS Prediction Framework for Web Services

Yilei Zhang, Zibin Zheng, and Michael R. Lyu
Software Reliability Growth Models Based on Local Polynomial Modeling
with Kernel Smoothing .................................................................................................................. 220
  L. Sandamali Dharmasena, P. Zeephongsekul, and Chathuri L. Jayasinghe

Efficient Analysis of Fault Trees with Voting Gates ........................................................................ 230
  Jianwen Xiang, Kazuo Yanoo, Yoshiharu Maeno, Kumiko Tadano, Fumio Machida,
  Atsushi Kobayashi, and Takao Osaki

Session 8: Software Aging and Rejuvenation

Workload Characterization for Software Aging Analysis .................................................................. 240
  Antonio Bovenzi, Domenico Cotroneo, Roberto Pietrantuono, and Stefano Russo

Optimal Resource Allocation in a Virtualized Software Aging Platform with Software
Rejuvenation ......................................................................................................................................... 250
  Javier Alonso, Íñigo Goiri, Jordi Guitart, Ricard Gavaldà, and Jordi Torres

Injecting Memory Leaks to Accelerate Software Failures ................................................................. 260
  Jing Zhao, Yuliang Jin, Kishor S. Trivedi, and Rivalino Matias Jr.

Author Index ........................................................................................................................................ 270
