2012 IEEE 15th International Symposium on Object/Component/Service-Oriented Real-Time Distributed Computing

(ISORC 2012)

Shenzhen, China
11-13 April 2012
Message from the Symposium Co-chairs .................................................................................................... vii
Message from the Program Co-chairs ........................................................................................................ viii
Organizing Committee .................................................................................................................................. ix
Reviewers...................................................................................................................................................... x

Distributed Real-Time Systems

Data-Centric Invocable Services: A Core Design Pattern for Building Scalable Distributed Real-Time Systems .................................................................................................................... 1
Rajive Joshi

Providing Real-Time Scheduling for Mobile Agents in the JADE Platform ........................................... 8
Tatiana Pereira Filgueiras, Lau Cheuk Lung, and Luciana de Oliveira Rech

An Open-Source Flexible Scheduling Simulator for Real-Time Applications ........................................ 16
Yutaka Matsubara, Yasumasa Sano, Shinya Honda, and Hiroaki Takada

Event Handling for Distributed Real-Time Cyber-Physical Systems ...................................................... 23
Jaipal Singh, Omar Hussain, Elizabeth Chang, and Tharam Dillon

Dependable and Secure Computing

Hardware Support for Safety-Critical Java Scope Checks ........................................................................ 31
Juan Ricardo Rios and Martin Schoeberl

Assessment and Evaluation of Internet-Based Virtual Computing Infrastructure .................................... 39
James Hardy, Lu Liu, Nick Antonopoulos, Weining Liu, Lei Cui, and Jianxin Li

A Fault Injection Method for Testing Dependable Web Service Systems .................................................. 47
Khaled Farj, Yuhui Chen, and Neil A. Speirs

Timing Analysis

Online Energy-Efficient Hard Real-Time Scheduling for Component Oriented Systems .......................... 56
Da He and Wolfgang Mueller

Worst-Case Execution Time Based Optimization of Real-Time Java Programs ..................................... 64
Stefan Hepp and Martin Schoeberl

Schedulability Analysis Abstractions for Safety Critical Java ................................................................. 71
Thomas Bøgholm, Bent Thomsen, Kim G. Larsen, and Alan Mycroft
Component-Based and Service-Oriented Architectures

Architecting Health Management into Software Component Assemblies: Lessons Learned from the ARINC-653 Component Mode ................................................................. 79
Nagabhushan Mahadevan, Abhishek Dubey, and Gabor Karsai

An Approach to Control Transmission of Medical Data over Cellular Networks Using Location Information ............................................................ 87
Uwe Hentschel, Fahad Khalid, and Andreas Polze

Service-Oriented Robotic Swarm Systems: Model and Structuring Algorithms .......................................................... 95
Guang Zhou, Yansheng Zhang, Farokh Bastani, and I-Ling Yen

Configuration and Adaptation

A Constraint Mechanism for Dynamic Evolution of Service Oriented Systems .................................................. 103
Bingyang Zhao, Yongwang Zhao, and Dianfu Ma

Interface Refactoring in Performance-Constrained Web Services ........................................................................ 111
David Webster, Paul Townend, and Jie Xu

Neural Network-Based Overallocation for Improved Energy-Efficiency in Real-Time Cloud Environments ........................................................................ 119
Ismael Solis Moreno and Jie Xu

Multi-Core Platforms

Experimental Evaluation of Global and Partitioned Semi-Fixed-Priority Scheduling Algorithms on Multicore Systems ................................................................. 127
Hiroyuki Chishiro and Nobuyuki Yamasaki

Detection and Defense Strategies against Attacks on an Artificial Hormone System Running on a Mixed Signal Chip .......................................................... 135
Christoph Leineweber, Mathias Pacher, Benjamin Betting, Julius von Rosen, Uwe Brinkschulte, and Lars Hedrich

A Light-Weighted Virtualization Layer for Multicore Processor-Based Rich Functional Embedded Systems ........................................................................ 144
Ning Li, Yuki Kinebuchi, Hitoshi Mitake, Hiromasa Shimada, Tsung-Han Lin, and Tatsuo Nakajima

Validation and Verification

Online Model Checking for Dependable Real-Time Systems ........................................................................ 154
Yuhong Zhao and Franz Rammig

Adapting System Execution Traces for Validation of Distributed System QoS Properties .................................. 162
T. Manjula Peiris and James H. Hill

An Optimized Compilation of UML State Machines .................................................................................... 172
Asma Charfi, Chokri Mraidha, and Pierre Boulet

Author Index .................................................................................................................................................. 180
