2012 IEEE 19th International Conference and Workshops on Engineering of Computer-Based Systems

(ECBS 2012)

Novi Sad, Serbia
11 – 13 April 2012
2012 IEEE 19th International Conference and Workshops on Engineering of Computer-Based Systems

ECBS 2012

Table of Contents

Message from General Chair......................................................................................................................x
Message from Program Chairs..................................................................................................................xi
Conference Organization...........................................................................................................................xii
Program Committee..................................................................................................................................xiii
Reviewers...................................................................................................................................................xiv
Keynote......................................................................................................................................................xv

Model-Based Development
Complexity of a Special Deobfuscation Problem .........................................................................................1
  Dmitriy Dunaev and László Lengyel

Using Template Metaprogramming to Enhance Reuse in Visitor-Based Model Interpreters ..........................................................5
  James H. Hill and Aniruddha Gokhale

Automated Software Generation and Hardware Coprocessor Synthesis for Data-Adaptable Reconfigurable Systems .........................................................15
  Andrew Milakovich, Vijay Shankar Gopinath, Roman Lysecky,
  and Jonathan Sprinkle

Verification & Validation I
Modeling and Verifying the Ariadne Protocol Using CSP ............................................................................24
  Xi Wu, Si Liu, Huibiao Zhu, Yongxin Zhao, and Lei Chen

Model Checking Goal-Oriented Requirements for Self-Adaptive Systems .....................................................33
  Dhaminda B. Abeywickrama and Franco Zambonelli
Using Parameterized Attributes to Improve Testing Capabilities
with Domain-Specific Modeling Languages .................................................................43

James H. Hill

Verification & Validation II

Touch-Screen Stimulation for Automated Verification of Touchscreen-Based Devices ..................................................................................................................52

Ivan Kastelan, Nikola Bednar, Mihajlo Katona, and Dusan Zivkov

Simultaneous Functionality Verification System of Multiple Set-Top Boxes .................................................................56

Vukota Pekovic, Daco Banika, Damjan Kuburovic, Vladimir Zlokolica,
and Nikola Vranic

Infrastructure & Platform

Automatic Set-Top Box Menu Navigation Scheme for STB Menu Functional Verification .....................................................................................................................60

Vladimir Zlokolica, Nebojsa Milutinovic, Vladimir Marinkovic, Vukota Pekovic,
and Jan Zloh

An Analytical Review of Process-Centered Software Engineering Environments .................................................................64

Reza Matinnejad and Raman Ramsin

A Way towards Efficiency of SCADA Infrastructure ............................................................................................................................74

Branislav Atlagic, Mihaly Sagi, Dejan Milinkov, Bojan Bogovac, and Stanko Culaja

An Architecture for Safe and Secure Automation System Devices and Maintenance Process .....................................................82

Christopher Preschern, Nermin Kajtazovic, and Christian Kreiner

Evolution & Change

Beyond Mainstream Adoption: From Agile Software Development to Agile Organizational Change ..................................................................................................................90

David Bustard

A Taxonomy of Change Types and Its Application in Software Evolution ..................................................................................98

Steffen Lehnert, Qurat-ul-ann Farooq, and Matthias Riebisch

A Metadata Driven Approach to Performing Multi-vendor Database Schema Upgrades ........................................................................................................108

Robert M. Marks
Simulation & Validation

Division of Road Traffic Network for Distributed Simulation Performed on Heterogeneous Clusters ................................................................. 117
  Tomas Potuzak

Discussion on the Zorn-Hypothesis on Inter-server Control Flow and Product Form Queueing Networks ............................................................... 126
  Stephan Kluth

Adaptive/Autonomic Systems

Target Tracking and Surrounding with Swarm Robots ................................................................. 135
  László Blázovics, Kristóf Csorba, Bertalan Forstner, and Charaf Hassan

Decision Support Using Deterministic Equivalents of Probabilistic Game Trees .............................. 142
  Michael L. Valenzuela, Liana Suantak, and Jerzy W. Rozenblit

Autonomous Systems

Route Separation Strategies for Human Movement Datasets .......................................................... 150
  Marcell Feher, Krisztian Fekete, Kristof Csorba, and Bertalan Forstner

An Architecture-Based Approach to Developing Context-Aware Adaptive Systems ................................................................. 154
  Mahmoud Hussein, Jun Han, Alan Colman, and Jian Yu

Signal Processing

System Design for Passive Human Detection Using Principal Components of the Signal Strength Space .......................................................... 164
  Bojan Mrazovac, Milan Z. Bjelica, Dragan Kukolj, Saša Vukosavljev, and Branislav M. Todorović

Hands-Free VoIP Terminal with Gain Control Based on Neural Network ................................................................. 173
  Szabolcs Pál, Zoran Šarić, Stanislav Očovaj, and Istvan Papp

Yield Modeling for Error Tolerant and Partially Defect Tolerant Arrays ................................................................. 182
  Vladimir Ćirić, Vladimir Simić, and Ivan Milentijević

Applications

Modeling and Visualization of Classification-Based Control Schemes for Upper Limb Prostheses ................................................................. 188
  Andreas Attenberger and Klaus Buchenrieder

Technical Realization of the Optimal Motion Planning Method for Minimally Invasive Surgery ................................................................. 195
  Jan Nikodem, George Hwang, Jerzy W. Rozenblit, and Liana Napalkova
Real-Time Systems and Platforms
A Task Tree Executor Architecture Based on Intel Threading Building Blocks .................................................. 201
  Miroslav Popovic, Miodrag Djukic, Vladimir Marinkovic, and Nikola Vranic
Support for Holistic Response-Time Analysis in an Industrial Tool Suite:
Implementation Issues, Experiences and a Case Study ................................................................. 210
  Saad Mubeen, Jukka Maki-Turja, and Mikael Sjödin
ViDL: A Versatile ISA Description Language .......................................................................................... 222
  Ralf Dreesen

Reengineering & Reuse
Influencing Factors on the Usability of API Classes and Methods .......................................................... 232
  Thomas Scheller and Eva Kühn
Analyzing the Complexity of Domain Model Representations ............................................................... 242
  Andrea Leitner, Reinhold Weiß, and Christian Kreiner

Domain Models
On the Extraction and Analysis of a Social Network with Partial Organizational Observation .............................. 249
  Sean Whitsitt, Abishek Gopalan, Sangman Cho, Jonathan Sprinkle, Srinivasan Ramasubramanian, Liana Suantak, and Jerzy Rozenblit
An Ontology-Alignment Based Recommendation Mechanism for Improving the Acquisition and Implementation of Managerial Training Services in Project Oriented Organizations ......................................................... 257
  Constanta-Nicoleta Bodea, Maria-Iuliana Dascalu, and Luca Dan Serbanati

Doctoral Symposium
A Host Based Method for Data Leak Protection by Tracking Sensitive Data Flow ............................................. 267
  Miodrag Petković, Miroslav Popović, Ilija Bašičević, and Djordje Sarić
A Module for Automatic Assessment and Verification of Students' Work in Digital Logic Design ................. 275
  Zarko Stanisavljevic, Bosko Nikolic, and Jovan Djordjevic
Towards Modeling and Holistic Timing Analysis of Industrial Component-Based DRE Systems .................. 283
  Saad Mubeen, Jukka Mäki-Turja, and Mikael Sjödin
Poster Session

Frequency Hopping Synchronization Scheme Based on Real-Time Clock .................................................293
  Slavko Šajić, Nebojša Maletić, Branislav M. Todorović, and Milan Šunjevarić

A Formal Authorization Framework for Networked SCADA Systems ......................................................298
  Ondrej Rysavy, Jaroslav Rab, Patrik Halfar, and Mirsolav Sveda

A Case Study in Software Reengineering for a DSP-based System on a Chip:
Adaptation of Dolby Virtual Speaker ..........................................................................................................303
  Zdravko Panjkov, Mihajlo Katona, Danijel Spasojevic, and Zoltan Pele

Author Index .............................................................................................................................................308
