## TABLE OF CONTENTS

### VOLUME 1

- **Numerical Studies of Wind Turbine Acoustics**
  - 1

- **Noise from a Jet Discharging Into a Duct and it Suppression**
  - Khairul Zaman, Michelle Clem, Amy Fagan
  - 27

- **Evaluation of the Sensing and Actuation Capabilities of Piezoelectric Composites in a Supersonic Impinging Jet Flowfield**
  - Christopher Freeborn-Scott, Jonas Gustavsson, Michael Hayes, William Dates, Farrukh Ali
  - 40

- **Numerical Investigation of Fluidic Enhanced Chevrons for Noise Reduction in Supersonic Jets**
  - J. Liu, K. Kailasanath, R. Ramamurti, N. Heeb, J. Kastner, E. Gutmark
  - 53

- **Application of a Generalized Instability Model to Industrial Annular Combustion Chambers**
  - J. Pent, B. Kock, W. Krebs, J. Portillo
  - 71

- **Simulation of Sound Propagation over Barriers of Arbitrary Shapes**
  - Z. Charlie Zheng, Guoyi Ke
  - 86

- **Inlet Flow Control Technology: Learning from History, Reinventing the Future**
  - 97

- **An Overview of Military Aircraft Supersonic Inlet Aerodynamics**
  - Richard Scharnhorst
  - 124

- **A Perspective on Mixed-Compression Inlets and the Use of CFD and Flow Control in the Design Process**
  - N. Domel, D. Baruzzini, D. Miller
  - 131

- **Detached Eddy Simulations of a Low-Boom Inlet**
  - Michael Rybalko, Eric Loth
  - 145

- **Design and Analysis Tool for External-Compression Supersonic Inlets**
  - John Slater
  - 161

- **Can Fundamental Shock-Wave/Boundary-Layer Interaction Research be Relevant to Inlet Aerodynamics?**
  - Neil Titchener, Holger Babinsky, Eric Loth
  - 181

- **Comparison of Sonic Booms from Modified Linear Theory to Flight Test Data**
  - Timothy Jung, Ryan Sarkey, Brian Argrow
  - 197

- **A Study on Modification of Low Speed Aerodynamic Performance of Hypersonic Transportation**
  - S. Okamura, S. Honami, H. Taguchi, A. Ueno, T. Hirota
  - 218

- **Adaptive Aft Signature Shaping of a Low-Boom Supersonic Aircraft Using Off-Body Pressures**
  - Irian Ordaz, Wu Li
  - 228

- **Stability Characteristics of Supersonic Natural Laminar Flow Wing Design Concept**
  - Yuki Ide, Kenji Yoshida, U. Ueda
  - 242

- **GOJETT: A Supersonic Unmanned Aerial Flight System**
  - S. Walter, R. Starkey
  - 258

- **Conceptual Design Study on LH2 Supersonic Transport for the 2030-2035 Time Frame**
  - Tatsunori Yuhara, Kenichiro Risoe
  - 269

- **A Revised Blade Element Model for Vehicles with Flapping Wings**
  - Michael Oppenheimer, David Sigthorsson, David Domon
  - 284

- **A Body Reorientation Strategy in Insect Takeoff Flight**
  - S. Okamura, S. Honami, H. Taguchi, A. Ueno, T. Hirota
  - 303

- **Flapping Wing Micro Air Vehicle Aerodynamic Modeling Including Flapping and Rigid Body Velocity**
  - David Sigthorsson, Michael Oppenheimer, David Domon
  - 312

- **Modeling and Analysis of Eagle Flight Mechanics from Experimental Flight Data**
  - Steven Shepherd, John Valsesia
  - 331

- **Insect Sized Flapping Wing Vehicles Versus Rotorcrafts, a Comparative Study**
  - David Sigthorsson, Michael Oppenheimer, David Domon
  - 341

- **Force Measurements of a Flapping Wing with Two Angular Degrees of Freedom and Bio-Inspired Kinematics**
  - C. Morrison, R. Vanderheede, D. Kamal, L. Berna, C. Cesnik
  - 356

- **Particle Image Velocimetry of a Three-Dimensional Supersonic Cavity Flow**
  - Justin Wagner, Brian Pruet
  - 364

- **Efficient Particle Image Velocimetry Data Restoration via Probabilistic Principal Component Analysis**
  - Kyungsoo Lee, Dimitri Mavris
  - 382

- **Using Wavelet Stochastic Estimation to Correlate Near-field Pressure to Velocity Pod Modes in a Supersonic Jet**
  - Jeffrey Kastner, Bhumidatta Malli, Ephraim Gutmark, Junhui Liu, Kailas Kailasanath
  - 404

- **Integration of Non-time-resolved PIV and Time-resolved Velocity Point Sensors for Dynamic Estimation of Time-resolved Velocity Fields**
  - J. Tu, C. Rowley, J. Griffin, L. Cattafesta, A. Hart, L. Ukeiley
  - 417

- **Large Field of View Particle-Image Velocimetry (LF-PIV): Design and Performance**
  - Suhas Pol, Balakumar Balasubramaniam
  - 439

- **Time-Resolved Stereoscopic PIV Measurement of Unsteady Wingtip Flowfield**
  - Hiroaki Kato, Shunsuke Koike, Kazuaki Nakahara
  - 450

- **Development and Application of Nanoparticle Tracers for PIV in Supersonic and Hypersonic Flows**
  - Fang Chen, Hong Liu, Zhen Rong
  - 459

Computational and Experimental Analysis of Mach 5 Air Flow over a Cylinder with a Nanosecond Pulse Discharge ........................................................................................................................................................................... 2702
Nicholas Risek, Jonathan Poggie, Munetake Nishihara, Igor Adamovich

Flow Control of a NACA0015 Airfoil in a Turbulent Wake Using Plasma Actuators .......................... 2732
Rassol Erfani, Craig Hale, Konstantinos Kontis

Characterization of Single Pulse of Plasma Jet ................................................................................... 2741
Kellie Anderson, Doyle Knight

Validation of an Effective Computational Model for Localized Arc-filament Plasma Actuators and Application to High Subsonic Boundary Layer Separation ......................................................................................................................... 2761
Mahesh Natarajan, Daniel Bodony

Correlation between Emission, Electric, and Flow Properties of Arc Filament Plasma Actuators ......... 2778
Bradley Deblauve, Bradley Sanders, Nick Glumac, J. Craig Dutton, Gregory Elliott

MHD Arcjet Onset Boundary of High Specific Impulse Plasma Thrusters ......................................... 2798
Jaisankar Subramanian, T. Sashima, F. Sheshadri

Beam Riding Performance of Asymmetrically Propelled Laser Vehicle ........................................... 2804
Masayuki Takahashi, Naoyuki Ohnishi
Estimation of Viscous Losses in Plasma Thruster Design by a Simplified Problem Formulation ............................................................. 2816

Pre-Ionization Plasma in an FRC Test Article .......................................................................................................................... 2828

R. Pohl, J. Rovey

Magneto-hydrodynamics Simulation Study of High-density Plasmas in Electromagnetic Guns ................................................................. 2855

Harishwaran Sitarum, Laksminarayanan Raja

T. Suchma, T. Sheehadri, Narsingh Ramesh

Laser Ablation Tractor Beaming with Bilayer Targets .................................................................................................................. 2867

John Sinko, Clifford Schlacht, Tomasz Liz, Rod Davidson, Don Gregory, Shigeru Yokota, Shouta Harada, Akihiro Sasoh, Benjamin Oh, Mark Lars

Thrust Vectoring of Laser-ablated Aluminum Plasma Using Permanent Magnets .................................................................................. 2874

Aaron Rubin, Sohail Zaidi, Richard Miles

Modification of Boron Nitride Ceramic to Replicate Hall Effect Thruster Surface Wear ................................................................. 2884

Alex Satonik, Joshua Rovey

Shadowgraphic and Optical Emission Spectroscopy Investigation of Nanosecond Discharge in Water .................................................. 2899

Ilya Marinov, Olivier Guaitella, Antoine Rouxseau, Svetlana Starkovskaya

Evaluation of Radiative Heat Transfer in Combustion Chamber of Al-H2O MHD Generator .......................................................... 2908

Valentin Biturin, Andrey Galaktionov

The Astrosoxological Paradigm: The Interplay between Ecologies and Environments .......................................................................... 2919

C. Hearsey, J. Pass

Spaceflight and Science Fiction ......................................................................................................................................................... 2927

Geoffrey Landis

Key Factors to Achieve Maturity in Safety Management Under a Safety Management System (SMS) ................................................. 2934

Guido Fuentes

Simulation of a Single-Element Lean-direct Injector Combustor Using Arbitrary Polyhedral Mesh ...................................................... 2940

T. Way, N. Liu

Analysis of Blow Off Limits and Regime Flame State Changes with Swirl and Cyclonic Stabilized Combustion ........................................ 2954

Nicholas Syred

Passive Mitigation of Combustion Noise in Liquid Fuel Combustion Using Porous Inert Media ................................................................. 2965

Joseph Meadows, Ajay Agrawal

Acoustic Effects of Porous Inert Media on Lean Premixed Combustion at Elevated Pressures .............................................................. 2977

L. Williams, Ajay Agrawal

Behavior of Methane Flame in the Channel Type Meso-combustors ................................................................................................. 2991

Mahbub Ahmed, Ahsan Choudhuri, Mosfoor Rahman

Large Eddy Simulation of Reacting Centerbody Stabilized Swirled Flow in a Gas Turbine Combustor ...................................................... 2999

Gilberto Corona, Bidhan Dam, Norman Love, Ahsan Choudhuri

An ODT-Based Multiscale Radiative Transport Model in Participating (Absorbing-Emitting) Gray Media ............................................. 3008

Vajjendravendra Shekhavat, Turek Echekki

NO, and PAH Emissions from n-Heptane and 1-Heptene Partially Premixed Flames ............................................................................... 3018

X. Fu, K. Brezinsky, S. Aggarwal

Small Probes for Orbital Return of Experiments .............................................................................................................................. 3035

D. Spencer, N. Bauer, J. Juneau, J. Kelly, A. Mandalia, M. Nehrenz

SPORE Entry, Descent and Landing .................................................................................................................................................. 3047

David Spencer, Nicole Bauer, Jessica R. Juneau, Jenny Kelly, Amit Mandalia, Allison Willingham, Justin McClellan

Small Probe Reentry Investigation for TPS Engineering (SPRITE) ........................................................................................................ 3057

D. Rokit, E. Kumar, D. Levin, D. Goldstein, P. Varghese, L. Trafton

Flowfield Analysis of a Small Entry Probe (SPRITE) Tested in an Arc Jet ........................................................................................... 3083

Dinesh Prabhu

Development of an Integrated Data Acquisition System for a Small Flight Probe ................................................................................ 3100

Greg Swanson, Daniel Empey, Kristina Skokova, Ethiraj Venkatapathy

Thermal Analysis of Small Re-entry Probes .......................................................................................................................................... 3107

Parul Agrawal, Dinesh Prabhu, Yih-Kanq Chen

Effect of SIC Foam and Radiative Properties on Thermal Protection Systems .......................................................................................... 3120

Charles Tseng, Raymond Viskanta, Reth Sikorski, Ming Chen

Variable Transpiration Cooling: A New Solution for the Thermal Management of Hypersonic Vehicles ............................................ 3130

Stefano Gulli, Luca Maddaletta, Serhat Hosder

Surface Heat Flux Prediction Through Physics-based Calibration: Part 1- Theory ................................................................................. 3146

Jay Frankel, Majid Keyhani, Bryan Elkins

Surface Heat Flux Prediction Through Physics-Based Calibration: Part 2-Experimental Validation ......................................................... 3189

Bryan Elkins, Majid Keyhani, Jay Frankel

Automated Aerodynamic Optimization for Lifting Hypersonic Vehicles at High Altitude ............................................................... 3209

Jonathan Burt, Envar Jyosula, Frederick Ferguson, Isaiah Blankson

Molecular Dynamics Simulations of Normal Shock Waves in Dilute Gas Mixtures ........................................................................... 3224

P. Valentin, P. Tump, C. Zhang, T. Schwartzentruber

Modeling and Simulation of Near-field Enceladus Plumes from Tiger Stripe Fractures Using a Collision-limiter Condensation Model .................................................. 3239

Bryan Elkins, Majid Keyhani, L. Trafton

Development of a Chemistry Model for DSMC Simulation of the Atmosphere of Io ........................................................................... 3259

N. Parsons, D. Levin, A. Van Duin

DSMC Modeling of NO Formation for Simulation of Radiation in Hypersonic Flows ........................................................................... 3273

Zheng Li, Ilyoup Sohn, Deborah Levin
Study of Homogeneous Condensation of Water in Supersonic Expansions using Molecular Dynamics .......................................................... 3297
A. Borner, Z. Li, D. Levin

Inflow Characterization and Aerodynamic Measurements on a SWT-2.3-101 Wind turbine .......................................................... 3321

Wake Structure of a 2MW Wind Turbine Measured Using an Instrumented UAV .......................................................... 3333
G. Kocer, N. Chokani, R. Abhari

Drag Reduction in Large Wind Turbines Through Riblets: Evaluation of Different Geometries .......................................................... 3346
Roger Arndt, Leonardo Chamorro, Fotis Sotiropoulos

Dynamic Stall Control on a Vertical Axis Wind Turbine Using Plasma Actuators .......................................................... 3354
D. Greenblatt, A. Ben-Harav, M. Schulman

Pressure Distributions on a Wind Turbine Blade Section for Various Pitch Oscillation Conditions .......................................................... 3372
Ashli Babhitt, John Strike, Michael Hind, Jonathan Naughton

Effects of Splitter Plate Length on Aerodynamic Performance & Vortex Shedding on Flatback Airfoils .......................................................... 3388
Camille Metzinger, Jonathon Baker, Johannes Grobbel, C. P. Van Dam

Development of Thick Airfoils for Wind Turbines .............................................................................................................. 3397

Comparison of the Wake of Different Types of Wind Turbine CFD Models .............................................................................................................. 3407
N. Trolldborg, F. Zahle, P. Réthori, N. Sorensen

Temporal and Spatially Resolved Spectroscopic Measurements of Plasma Actuator Thermal Properties .......................................................... 3418
Bradley Sanders, Bradley Deblauw, Gregory Elliott, J. Craig Dutton, Nick Glumac

Picosecond USED-CARS for Simultaneous Rotational/Translational and Vibrational Temperature Measurement of Nitrogen in a Nonequilibrium Mach 5 Flow .............................................................................................................. 3432

Picosecond E-field CARS: A Diagnostic Technique for Measurement of Electric Field in Pulsed Plasmas .............................................................................................................. 3463
B. Goldberg, S. O’Byrne, W. Lempert

Time-resolved Electric Field Measurements in 1-5 ATM Nanosecond Surface Dielectric Discharge. Ignition of Combustible Mixtures by Surface Discharge .............................................................................................................. 3480
I. Kosarev, P. Sagulenko, V. Khorunzhenko, N. Popov, S. Starikovskaya

VOLUME 5

Atomic Oxygen Measurements in \( \text{O}_2(\text{a}1\text{g}) \) Injected Nonequilibrium Plasmas by Two Photon Absorption Laser

Induced Fluorescence ........................................................................................................................................ 3497
Sherrie Bowman, Igor Adamovich, Walter Lempert

Simultaneous Planar OH Imaging of Microwave Plasma Enhanced Combustion at 10 kHz .............................................................................................................. 3520
S. Hammack, T. Lee, C. Carter, A. Lynch, S. Koska

Kinetics of Plasma-Assisted Oxidation and Ignition below Self-Ignition Threshold
Andrey Starikovskiy

Fluidic Enhancement of Mechanical Chevrons using Novel Schemes .............................................................................................................. 3539
Nick Heeh, Ephraim Gutmark, Kailas Kaliesanath, Junhai Liu

Active Suppression of Supersonic Jet Noise Using Pulsating Micro-Jets .............................................................................................................. 3552
H. Hafsfeinsson, E. Eriksson, D. Cuppoletti, E. Gutmark, E. Prisell

Nozzle Throat Optimization for Supersonic Jet Noise Reduction
B. Gustafson, D. Cuppoletti, E. Gutmark, H. Hafsteinsson, L. Eriksson, E. Prisell

Bird-Like Wing Configuration for Pitch Control of a Tailless Aircraft
Andreas Bradley, Roland Gardhagen, Matts Karlsson

Improved Aerodynamic Design for Hybrid Wing Body Conceptual Design Optimization

A Two-Dimensional Fourth-Order CESE Method for the Euler Equations on Triangular Unstructured Meshes ........................................4298
David Bilyeu, Yang-Yu Chen, Sheng-Tao Yu

Spectral Difference Solution of Two-dimensional Unsteady Compressible Micropolar Equations on Moving and Deformable Grids .................................................................4318
C. Liang, J. Chen, J. Lee

Isogeometric Analysis of Euler Compressible Flow. Application to Aerodynamics..................4330
Takaaki Shizawa, Kouji Sakai, Kazuki Miyajima, Ryo Miyashita

Large-Eddy Simulations of a Pitch-up and Pitch-down Maneuver of a Span-wise Flexible Wing in a Free Stream Flow .................................................................4399
Dewei Qi, Pingming Liu, Guowei He

Conservation and Grid Adaptation Enhancements to a Normal Ray Refinement Technique for Cartesian-Grid Based Navier-Stokes Solvers ............................................................4425
Mina Zaki, Stephen Ruffin

A Rapid, Robust, and Accurate Coupled Boundary-Layer Method for Cart3D ................................4444
D. Rodriguez, P. Sturzd, Y. Suzuki, H. Martines-Rivas, A. Peronto

A Quasi-Simultaneous Interactive Boundary-Layer Model for a Cartesian Euler Solver ..........4463
Peter Sturzd, Yoshihumi Suzuki, Hervé Martines-Rivas, David Rodriguez

Improving the Accuracy of Euler/Boundary-Layer Solvers with Anisotropic Diffusion Methods ..................................................4483
David Rodriguez, Peter Sturzd, Robert Eymard

Advanced Interpolation Techniques for Overset CFD ..........................................................4498
Eliot Quon, Marilyn Smith

DSMC Tools for Hybrid Continuum/Rarefied Flow Simulations ...........................................4521
Douglas Van Gilder, Richard Wilmot, John Papp

Solving the Shallow Water Equations Using the High Order Space-Time Discontinuous Galerkin Cell-Vertex Scheme .................................................................4533
S. Tu, Q. Pang, H. Xiang

Integrated CFD and Controls Analysis Interface for High Accuracy Liquid Propellant Slosh Predictions ..................................................4543
Brandon Marwell, David Griffin, Paul Schallhorn, Jacob Roth

Direct Numerical Simulations of Steady and Unsteady Stenotic Flows ................................4553
C. Brehm, H. Fasel

Collisions Frequency of Particles and Bubbles Suspended in Homogenous Isotropic Turbulence ..................4585
H. Fayed, S. Ragob

Flow Induced by a Small Fire in an Aircraft Cargo Compartment ........................................4597
Ezgi Oeztek, David Blake, Richard Lyon

Analysis of Two-Phase Flow in an Effervescent Atomizer Using Volume of Fluid Method ........4610
S. Mohammood, J. Massad

Quasi-3D Multi-Step Ice Accretion Simulation .................................................................4619
D. Da Silva, L. Trapp, R. Domingos, R. Papa, L. Santos

Proper Orthogonal Decomposition Applied to the Reynolds-Averaged Navier–Stokes Equations ..................................................4637
Brian Freno, Thomas Brenner, Paul Cizmas

PIV and Volumetric 3D Measurements of Separated Turbulent Boundary Layers on a NACA4412 Hydrofoil .................................................................4662
Redha Wahidi, Jonathan Smith, Amy Lang

Acoustic Separation Control for a Laminar Flow Airfoil ..................................................4684
Stuart Benton, Chiara Bernardini, Nathan Packard, Jeffrey Bons

On the Frequency Scaling of the Forced Flow Above a Low Aspect Ratio Wing ..................4694
Stefan Vey, Christian Nayeri, Christian Paschereit, David Greenblatt

Airfoil Stall Suppression by Use of Rectangular Cross Section Burst Control Plates ........4704
Yushi Nakamura, Kenichi Rinoie, Yasuto Sunada

Uniform Dividing Wing Ejecting Smoke of Slot Film Seeding ........................................4718
Takahiro Shizawa, Kenji Sakai, Kazuki Miyajima, Ryo Miyashita

Measurement and Assessment of Flow Quality in the National Transonic Wind Tunnel ....4730
Kevin Owen, Andrew Owen

Management of Wind Tunnel Performance Data Using Neural Networks ........................4738
Mark Rennie, Alan Cain

Influence of Primary Gage Sensitivities on the Convergence of Balance Load Iterations ..........4747
Norbert Ulbrich
Dynamic Testing and Analysis of Self-supporting Inflatable Booms ................................................................. 4765
Jianzheng Wei, Hui-Feng Tan, Jian-Xin Yu, Xiao-Dong He

On the Unsteady Thrust Measurement for Pulse Detonation Engines ................................................................. 4773
Dibesh Joshi, Frank Lu

Chemiluminescence and High Speed Imaging of Reacting Film Cooling Layers ............................................... 4782
Alanna O’Neil, Scott Stouffer, Stanislav Kostka, Sakesh Roy, Amy Lynch, David Blumack, James Gord, Marc Polanka

Design Optimization Methods for Improving HPT Vane Pressure Side Cooling Properties Using Genetic Algorithms and Efficient CFD ........................................................................................................... 4791
Jamey Johnson, Paul King, John Clark, Michael Osten

Numerical Simulation of Film Cooling with Auxiliary Holes .................................................................................. 4810
Leandro Fernandes, Rômulo Freitas, Marco Mendonca, Ricardo Flatschart, Aluisio Pantaleão

Multi-variable Correlation for Cylindrical Holes at the Suction and Pressure Sides of Turbine Vane ............... 4825
Hossein Nadihi Najafabadi, Matts Karlsson, Eva Utriainen, Mats Kinell

Studying the Performance of Transonic Axial Flow Compressor by Implementing Circumferential Grooves, Tip Recess and Tip Injection ................................................................................................................................. 4837
J. Khan, A. Mucha, K. Parvez, S. Ahmad

Particle Image Velocimetry in an Isothermal and Exothermic High-Speed Cavity ...................................... 4844
Steven Tuttle, Kaangyu Hsu, Campbell D. Carter

Simultaneous High-Frequency Pressure and TDLAS Measurements in a Small-Scale Axisymmetric Isolator with Bleed ................................................................................................................................. 4864
J. Donbar, M. Brown, G. Linn, K. Hsu

Evolution of Large-Scale Structures Generated by a Strut Injector in a Mach 2.5 Flow ..................................... 4877
Cristian Vergine, Luca Maddalena

Supersonic Combustion and Flame-Holding Characteristics of Pylon Injected Hydrogen in a Mach 2.4 High Enthalpy Flow ................................................................................................................................. 4892
F. Vergine, L. Maddalena, V. Miller, M. Gamba

Implementation of Analytical Target Cascading for Aircraft Design ................................................................. 4903
Xiaofan Fei, Brian German, Sameet Parashar

Law and Engineering: An Alternative Approach to Develop More Efficient Transport Category Aircraft ........... 4916
Timothy Takashiki

Updates and Modeling Enhancements to the Assessment of NASA Environmentally Responsible Aviation Technologies and Vehicle Concepts ......................................................................................................................... 4936
J. Schatte, B. Kestner, J. Tai, D. Mavris

Hybrid Wing Body Configuration Scaling Study ......................................................................................................... 4949
Craig Nickol

Conceptual Optimal Design of Airliners with Noise Constraints ......................................................................... 4964
Bento Mattos, Paulo Magalhaes

Development of a Generic Fleet-Level Noise Methodology .................................................................................. 4981
Jose Enrique Bernardo, Michelle Kirby, Dimitri Mavris

Modeling of Steady Laminar Flames for One-dimensional Premixed Jets of Heptane/Air and Octane/Air Mixtures ................................................................................................................................. 4995
Kenneth Harstad, Josette Bellan

Roles of Baroclinic Torque by Acoustic Oscillation on Structure of Premixed Flame ................................ 5009
Takuya Hiroe, Hiroshi Kasakawa, Hiroshi Yamada, Wataru Takizawa, Yuma Mano, Takao Kawanaka, Mitsuzaki Tanabe

Linear Stability Analysis of a Non-premixed Buoyant Jet Flame .......................................................................... 5018
Kenneth Harstad, Josette Bellan

Parametric Study of Droplet Grouping in Spray Diffusion Flames ......................................................................... 5032
Jerrold Greenberg, David Katochewski

Bifurcation Analysis and Observation of Intermittency in Combustion-driven thermoacoustic Oscillations .... 5042
R. Sujith, Lipika Kabiraj

Multi-Component Turbulent Droplet Evaporation of Kerosene Fuel in Hot Gas Environment ......................... 5053
Omid Sanmini Atohne, Chien P. Chen

Sub-to-Supercritical Mixing in Single and Dual Component Systems .................................................................. 5063

Exploration of Aerated-Liquid Jets Using X-Ray Radiography ........................................................................... 5071
Kuo-Cheng Lin, Campbell Carter, Stephen Smith, Alan Kastengren

Evaluation of Spray and Combustion Behavior of Alternative Fuels for JP-8 ..................................................... 5093
Ulises Mondragon, Christopher Brown, Vincent McDonell

Influence of the Energy Dissipation in the Spray Impingement Modeling .......................................................... 5106
Christian Rodrigues, Jorge Barata, Andre Silva

Modeling of Scalar Dissipation Rates in Flamelet Models for HCCI Engine Simulation ................................... 5117
Saurabh Gupta, Seungwoo Kwon, Hong Im

Direct Numerical Simulation of High-Pressure Multispecies Turbulent Mixing in the Cold Ignition Regime ...... 5127
E. Mai, J. Bellan, K. Harstad

Stabilization Dynamics of Bluff-body Premixed Flames ......................................................................................... 5138
Y. Sandaran, P. Palier, S. Lidenberg, K. Teerlinck, M. Sotierou

Flame Wrinkle Destruction Processes in Harmonically Forced, Laminar Premixed Flames ........................ 5154
Dong-Hyuk Shin, Tim Lieuwen

Experimental Investigation and Numerical Prediction of Thermo-Acoustic Instabilities and Associated Liner Vibrations Induced by Turbulent Combustion in Gas Turbines .............................................. 5169
A. Pozarik, J. Kok
Effect of Applied Magnetic Field on Shock Boundary Layer Interaction ................................................................. 5186
Ovais Khan, Alexandre Martin

Numerical Study on Magnetic Nozzle for Efficient MHD Application ................................................................. 5198
Ulterior Spadavecchia, Toru Sasaki, Takashi Kituchi, Nobuhiro Harada

Studies on Pulsed Linear MHD Accelerator Using Model Rocket Engine ......................................................... 5207
Yasichi Takai, Yuki Nagamuna, Shio Takayanagi, Toru Sasaki, Takashi Kituchi, Nobuhiro Harada

A Mining Engineering Approach to Mining Lunar Regolith ................................................................................... 5213
P. Kluge, A. Neale

ISR Soil Mechanics Vacuum Facility: Soil Bin Preparation and Simulant Strength Characterization ............... 5221
J. Kleinhenz, A. Wilkinson

Mars In Situ Resource Utilization Technology Evaluation ....................................................................................... 5229
Anthony Muscatello, Edgardo Santiago-Maldonado

VOLUME 7

Computation of Shock Waves in Inert Binary Gas Mixtures in Non-equilibrium Using the Generalized Boltzmann Equation ..................................................................................................................... 5242
G. Qian, R. Agarwal, C. Wilson

Master Equation Study of Hydrogen Relaxation Using Complete Sets of State-to-state Transition Rates .............. 5251
J. Jangaon Kim, Ian Boyd

Characteristics of Arc-Heated Plasma Flow for Martian Atmosphere .................................................................. 5272
Gouji Yamada, Singo Ototta, Takashi Matsuno, Hiromitsu Kawasoe

Convective Heating of Hemisphere Cylinder at Hypersonic Velocities ................................................................. 5279
S. Surzhikov, J. Shang

Numerical Investigation of Double-Cone Flows using an Energy-Bin Approach ................................................. 5303
Sriram Doraiswamy, John Kelley, Graham Candler

Large Eddy Simulations of a Cylindrical Film Cooling Hole ................................................................................ 5317
Perry Johnson, Jayanta Kapai

Optimization of Low Jet-to-Target Spacing Ratio for Double Wall Impingement Cooling Applications ............ 5333
J. Ramesh, D. Narzary, S. Ekkad

The Performance of Fan-shaped Hole Film Cooling on a Gas Turbine Blade at Transonic Condition with High Freestream Turbulence ..................................................................................................................... 5342
S. Xue, W. Ng, S. Ekkad, H. Moon, L. Zhang

Development of Microwave Plasma Diagnostics for Expansion Tunnel Characterization .................................. 5353
H. Hall, C. Crayford, B. Buckham

Experimental and Numerical Study of Flow Diagnostics in Hypersonic Rarefied Wind Tunnel in JAXA ................ 5366
Toshiyuki Suzuki, Takashi Otawa, Kazutaka Fujita

Development, Validation and Application of a Curved Vortex Filament Model for Free Vortex Wake Analysis of Floating Offshore Wind Turbines ............................................................................. 5381
F. Beyrer, D. Mathro, T. Sebastian, M. Lackner

Generalized Floating Wind Turbine Support Platform Optimization: A Basis Function Approach ................. 5393
Ali Nematbakhsh, David Olinger, Garet Tryggvason

Development and Validation of a Computational Model for Floating Wind Turbine Platforms .......................... 5407
Alt Nemathbakhsh, David Olinger, Garet Tryggvason

Unsteady Near-Wake of Offshore Floating Wind Turbines .................................................................................. 5419
Thomas Sebastian, Matthew Lackner

Scale-model Experiments on Floating Wind Turbine Platforms ......................................................................... 5439
David Olinger, Eric Destefano, Eric Murphy, Kazim Naaqi, Garet Tryggvason

Determining Optimal Tuned Mass Damper Parameters for Offshore Wind Turbines Using a Genetic Algorithm 5450
Gordon Stewart, Matthew Lackner

Transition from Stable Laminar to Highly Unstable Behavior in Premixed Propane/air Flame with Subbreakdown Electric Field ............................................................................................................. 5472
Jacob Schmidt, Biswa Gunguly

Towards Species Concentration Measurements for a Pulsed Subcritical Microwave-enhanced Flame .............. 5483
J. Michael, T. Chng, A. Dogaru, R. Miles

A New Plasma-flame Facility for Spectroscopic Investigations of the Effects of Plasmas on High-temperature Oxidation and Combustion Chemistry ............................................................... 5489
Ting Li, Igor Adamovich, Jeffrey Sutton

Laminar Flame Propagation Enhancement by Singlet Molecular Oxygen .......................................................... 5498
Timothy Ombrello, Campbell Carter, Viswanath Kata

Direct Ignition and S-curve Transition by in situ Nano-Second Pulsed Discharge in Methane/Oxygen/Helium Counterflow Flame ............................................................................................................. 5508
Ovais Khan, Alexandre Martin

Chemical and Transport Effects of Nanosecond Plasma Discharges on H2-Air and C2H4-Air mixtures ............. 5519
Shruthi Nagaraja, Vigor Yang

Aeroacoustic Assessment of Conceptual Low-Noise High-Lift Wing Configurations ........................................ 5531
Huadong Yao, Lars-Erik Eriksson, Lars Davidson, Olof Grandstam, Shih-Hui Peng, Peter Eliasson

The Aeroacoustics of High-Lift Slat Under the Effect of Pressure Fluctuations .................................................. 5544
Bassam Rakhshani

The page dimensions are 612.0x792.0. The text on this page is a list of research papers and their authors, with page numbers indicated next to each entry.
Frequency Locking and Vortex Dynamics of an Acoustically Excited Bluff Body Stabilized Flame ................................................. 6580
B. Emerson, J. O’Connor, D. Noble, F. Leuwen

LES-based Evaluation of the Turbulent Schmidt Numbers for Confined Coaxial Jets ...................................................................... 6597
Elizaeva Ivanova, Berthold Noll, Manfred Aigner

LES of Temporally Evolving Mixing Layers by an Eighth-Order Filter Scheme ................................................................. 6610
Abdelrah Hadijadi, Helen Lee, Bjorn Siggreen

PIV Measurements of Flow in Recirculation Cavities at the Inlet of a Centrifugal Compressor ................................................. 6646
M. Gancedo, E. Guimarães, E. Guillas, A. Mohamed

Cavitation Performance of Pump Impellers with Different Leading Edge Vane Profiles .................................................. 6659
Ravishankar Balasubramaniam, Eugene Sabini, Simon Bradshaw

High-Order Navier-Stokes Simulations Using a Sparse Line-Based Discontinuous Galerkin Method ........................................ 6669
Per-Olof Persson

Robust Computation of Turbulent Flows Using a Discontinuous Galerkin Method ...................................................... 6681
Nicholas Burgess, Dimitri Marupilis

Numerical Flux Functions for RANS-k-omega Computations with a Line-Preconditioned p-Multigrid DG Solver .................. 6718
H. Luo, S. Li, Y. Xia, R. Nourgaliev, C. Cai

Higher-Order and Adaptive Discontinuous Galerkin Methods with Shock-Capturing Applied to Transonic Turbulent Delta Wing Flow .............................................................. 6736
Ralf Hartmann

A $PnPm$-CPR Method for Navier-Stokes Equations ........................................................................................................... 6746
L. Shi, Z. Wang, S. Fu, L. Zhang

A Hermit WENO Reconstruction-based Discontinuous Galerkin Method for the Euler Equations on Tetrahedral Grids ................................................. 6766
Bernhard Eisfeld, Markus Raettig

Verification and Validation of RANS Turbulence Models in Commercial Flow Solvers .............................................. 6784
Jacob Freeman, Christopher Roy

A Coupled Heat Exchanger Boundary Condition for Pre-Design of Air-Intake Positions ............................................................... 6799
Bernhard Eisfeld, Markus Raettig

Simulation of Various Turret Configurations at Subsonic and Transonic Flight Conditions Using OVERFLOW ................ 6813
Renato Jelic, Scott Sherer, Robert Greenadyke

Differential Reynolds Stress Modeling for Aeronautics ........................................................................................................... 6832
Beni-Daniel Cóccora, Bernhard Eisfeld, Axel Probst, Simone Crippa, Rolf Rodenius

Generation of Divergence-Free Synthetic Turbulent Velocity Fields for LES/CAA Applications ........................................... 6850
Adrian Sescu, Roy Hixon

On a Scale Invariant Model of Statistical Mechanics, Kinetic Theory of Ideal Gas, and Riemann Hypothesis ....................... 6871
Siavash Sohrab

A Modified Point-Diffraction Interferometry for Shock Tube Airfoil Testing .......................................................... 6923
Masashi Kashiwagi, Yutaka Yamaguchi, Dai Miyazaki, Gendai Oki

Review of Basic Research and Development Programs Conducted in the LENS Facilities in Hypersonic Flows ..................... 6933
Michael Holden, Timothy Wadham, Matthew Maclean, Aaron Dufrene, Erik Mundy, Eric Marineau

Recent Experimental Studies of High Speed Boundary Layer Transition in LENS Facilities to Further the Development of Predictive Tools for Boundary Layer Transition in Flight ......................................................... 6950
Tim Wadham, Matthew Maclean, Michael Holden

High-Bandwidth H$_2$O Absorption Sensor for Measuring Pressure, Enthalpy, and Mass Flux in a Pulsed-Detonation Combustor ........................................................................... 6966
Andreas Casswell, Sukesh Roy, Xinliang An, Scott Sanders, John Hoke, Fred Schauer, James Gerd

Advanced Rigid Ablative Thermal Protection Systems ........................................................................................................... 6976
J. Feldman, M. Gasch, C. Poteet, C. Szalai

VOLUME 9

Parametric Study of Scaling Effects on Turbine Blades Thermal Barrier Coating Erosion ............................................................... 6998
Dongyoun Shin, Awaifet Hamed

Effect of Hot Streaks on Ash Deposition in an Uncooled Turbine Vane Passage ........................................................................... 7015
Brian Casaday, Ali Ameri, Jeffrey Bons

Effect of Casing and Tip Modifications on the Performance of an Axial Flow Stage ................................................................. 7037
W. Lin, K. Seenivas, R. Webster, D. Hyams

Computational Evaluation of Labyrinth Seal Configurations ................................................................................................. 7053
Rómulo Freitas, Leandro Fernandes, Marco Mendonça, Ablasio Pantaleão, Ricardo Flatschart

Computational Viscoplasticity-Based Modeling of Stress/Strain Response in Thermomechanical Fatigue Loads .................. 7064
Justin Karl, Ali Gordon

Flow Dynamics and Mixing of a Sonic Jet into Supersonic Crossflow ........................................................................ 7071
Liwei Zhang, Vivy Yang

DDES of a Supersonic Coaxial Helium Jet ................................................................................................................................. 7087
Peter Cocks, William Davies, Robert Cant

Hybrid LES/RANS Simulations of Shock-Distorted Injection Plumes ................................................................................ 7117
John Boles, Mark Hagenmaier, Kuangyu Hsu

Hypervelocity Testing of a Dual-mode Scramjet ....................................................................................................................... 7131
M. Smaida, P. Vogel, I. Schulz, R. Hanson, R. Folsche, C. Tsai, D. Cresci, C. Goyne
Large Eddy Simulation based Studies of Reacting and Non-reacting Transverse Jets in Supersonic Crossflow

S. Kim, P. Donea, V. Raman, E. Lin, C. Carter

Comparison of Simulations and Models for Aspiration in a Supersonic Flow using OVERFLOW

N. Wukie, P. Orkvis, M. Turner, S. Duncan

Development of UAV Trajectory Management System Based on Fuzzy Logic Concepts

A. Al-Shehabi, B. Newman

Identifying Suitable Algorithms for Human-Computer Collaborative Scheduling of Multiple Unmanned Vehicles

A. Clare, M. Cummings, L. Bertuccelli

Smart Material Actuators As a Means of UAV Flight Control

T. Probst, K. Kochersberger, B. Stilner, C. Hickling, O. Ohanian, E. Kurni, C. Olsen, A. Blain

Fuzzy Logic Clustering of Multiple Traveling Salesman Problem for Self-Crossover Based Genetic Algorithm

Nicholas Ernest, Kelly Cohen

Optimized Fuzzy Market-Based Solution to the Multiple Traveling Salesmen Problem Using Particle Swarm Optimization

Ehud Kivelovich, Kelly Cohen, Manish Kumar

FLC-based Landing Approach and Collision Avoidance Path Planning for Multiple Aircraft and Runways

Joseph Stern, Kelly Cohen

INVENT: Study of the Issues Involved in Integrating a Directed Energy Weapons Subsystem into a High Performance Aircraft System

Grant Gvozdich, Peter Weise, Michael Von Spakovsky

INVENT: Mission-Integrated Optimization of a Tip-to-Tail High Performance Aircraft System

Peter Weise, Grant Gvozdich, Michael Von Spakovsky

Development of Surrogate Models for an Aircraft Synchronous Generator
