# TABLE OF CONTENTS

A Forecasting Method of Trip Generation Based on Land Classification Combined with OD Matrix Estimation ................................................................. 1  
Canqi Liu, Dong Hu

New Urban Roadway Form in China: A Case Study for Kunming ................................................................. 5  
A. Luo, Zhigao Wang, Jiangyan Wang, S. Rashid, P. Calthorpe

The Hierarchical System Modeling for the Planning of Comprehensive Passenger Transportation Hub Nodes ................................................................. 12  
Xiaohui Zhang, Xiucheng Guo, Ming He, Xiaochuang Du

Integrated Land Use and Transport in China: Problems and Prospects ................................................................. 18  
Hu Peng, Rui Yang, Yulin Jiang, Sunsheng Han

Research on Mixed Set Programming for Aircraft Schedule Recovery ................................................................. 25  
Bo Zhu, Jinfu Zhu

Air-Rail Inter-Modal Network Research and Design ................................................................. 32  
Nian Yang, Jinfu Zhu, Xian Lu

Analysis the BTH Region Harmonizing Logistics Developing Based on SD Model ................................................................. 37  
Xuyuan Zhang, Zant Sun, Ying Wang, Ying Zhang, Kaijun Song

Microscopic Simulation on Ticket Office of Large Scale Railway Passenger Station ................................................................. 41  
Jiao Li, Ling Wang

Commuter Drivers' Parking Choice Behavior in Central Business District ................................................................. 48  
Binglei Xie, Lei Sun, Zhili Wang

Study on Bi-Level Programming Model of Highway Traffic Network Based on the Sustainable Development Theory ................................................................. 53  
Changxi Ma, Aixia Diao, Zhizhong Chen

A Study of the Speed-Flow Probability Model Under the Non-Congested Condition ................................................................. 58  
Jinxin Cao, Chongzi Xiao, Jun Wu

Analysis of Transportation Network Structure of Hub-and-Spoke: An Economic Perspective ................................................................. 63  
Goaoqin Xu, Peijun Zhuang

Analysis of Transfer Station Design in Hong Kong ................................................................. 68  
Peng Du, Baohua Mao, Zhili Liu

Knowledge-Based Prediction and Evaluation of Highway Networks Planning ................................................................. 74  
Lixia Bao

Optimization Methodology of Bus Network Along Metro Corridors Based on Key Performance Indicators Analysis ................................................................. 79  
Daizong Liu, Suping Chen

Research on the Demand Building Scale in Public Transfer Region of the Comprehensive Passenger Centre ................................................................. 86  
Canghui Zhu, Jingdong Jin, Penglin Li, Yadi Wang

Modeling of the Chinese Driver's Braking Behavior in the Simulated Traffic Scene of Rear-End Collision Avoidance ................................................................. 92  
You Ren, Jingjing Li, Guan Yan, Weixiu Wang, Xia Liu, Ji Zhang

Research on the Traffic Flow's Guidance Approach Based on the Parking Lot Choice ................................................................. 98  
Jinxin Cao, Shiyuan Zhang, Junxia Gao

Study of Exit Choice with Fire Based on Cellular Automaton ................................................................. 103  
Ying Zheng, Bin Jia, Xingang Li, Haibo Fei, Nuo Zha

Analysis of the Effect of the Light Rail on the Airport Passengers Transfer ................................................................. 108  
Jian Liu, Jia Huang, Qingyuan Wang, Ning Zhang

Relations Model of Urban Development Level and Macroscopic Road Network Operation ................................................................. 114  
Zhongwei Yang, Weipo Yan, Jiancheng Wang, Xiaoming Liu

Analysis on the Mechanism and Optimization Method of Urban Traffic Structure ................................................................. 120  
Man Zhang, Wenquan Li

Minimum Vertex Cover Problem Based on Ant Colony Algorithm ................................................................. 125  
Jingrong Chen, Ruihua Xu

Assessing the Influence of Public Transit Headway Irregularity on Passenger's Distribution ................................................................. 130  
Suping Chen, Daizong Liu

Modeling the Impacts of Weather, Spatial and Temporal Factors on Traffic Operation ................................................................. 136  
Han Feng, Changcheng Li, N. Zhao, Han Hu
Evaluation and Optimization of Bus Route Network in Wuhan China .............................. 140
Ning Zhang, Zhengdong Huang

VMS Effectiveness Under Influence of Time Control ...................................................... 149
Lihua Geng, Xiaoning Chen

Two-Dimensional CA Simulation of Radial Public Transit Network Layout ...................... 153
Min Wang, Fang Lin, Wenjuan Li, Junwei Zeng, Yongsheng Qian, Xiaoping Guang

A Study on Delay of Single-Lane Roundabout .............................................................. 157
Zhuwei Cao, Yun Han

Study on Cooperation of Urban Traffic Control and Route Guidance Based on Fuzzy Theory ................................................................. 161
Zhongyu Gao, Yan Hu

Risk Search of the China’s Freeway Market Development Model .................................. 166
Zuogong Wang, Junwei Li, Yanrong Li

The Research on Countrywide Railway Operation Simulation System ............................ 169
Wang Li, Shaoquan Ni, Hongxia Lv

Cellular Phone Data Analysis in Comprehensive Transportation Survey: A Case Study in Beijing ........................................................................... 176
Zhongwei Hu, Xiaoyong Deng, Huimin Wen, Jifu Guo, Chao Wang

The Attribute Recognition Model of Highway Conditions Evaluation .......................... 181
Shangyang Yang, Longyuan Zhang, Yue Gao

A Star Model for Urban Short-Term Traffic Flow Forecasting ........................................ 185
Xianghai Sun, Tanqiu Liu

Research on Information Overload of Variable Message Signs in Beijing......................... 191
Xi Chen, Dongmei Liu, Jisheng Zhang, Dongfan Xie, Tao Kong, Jing Wang, Juan Wen

Research on Application of Fish Swarm Behaviour in Intelligent Transportation System .... 195
Lei Lai, Shuju Qu

Study on Encoding Technology of Urban Traffic Signs Based on Demands of Facilities Management ................................................................. 201
Ruili Guo, Zhonghua Wei, Yang Li, Jian Rong

The Management and Assessment of Environmental Noise of Urban Rail Transit System ................................................................. 208
Shiqiang Wang, Wencheng Hu, Ruxiang Song, Kun Yao

Research on the Mixed Multi-Mode Traffic Assignment Model Under Influence of ATIS .... 211
Wen Jun Hu

Vehicle Collision Warning System and Collision Detection Algorithm Based on Vehicle Infrastructure Integration .......................................................... 216
Yunpeng Wang, E. Wenjuan, Daxin Tian, Guangquan Lu, Guizhen Yu, Yifan Wang

Characteristics and Prevention of Road Transport Liquefied Natural Gas (LNG) Accidents ................................................................. 221
Junwei Zeng, Min Wang, Yafei Liu, Yongsheng Qian

Calculation and Prediction of Energy Consumption for Highway Transportation ................ 226
Feng Qiu, Wenjuan Li, Qiaofeng Xie, Peng Zhang, Yueying Huo

Tractor and Semi-Trailer Transportation's Effect on the Reduction of CO2 Emission in China ................................................................. 232
Hongqi Li, Yue Lu

Evolution of CO2 Emissions from Domestic Freight Transport in China ........................ 238
Yuanjing Wang, Y. Hayashi, Qipeng Sun, H. Kato

The Research on the Application of Rough Set Analysis in the Strategy of the Road Transport Energy Conservation and Emission Reduction ........................................................................... 243
Xiaofeng Zheng, Jianmin Xu

Passenger Transport Co2 Emission and Mitigation Policies in Developing Mega-city: A Case Study of Shanghai ................................................................. 248
Xiao Luo, Y. Hayashi, H. Kato, Qipeng Sun

Evaluation Study on Low-Carbon Core Competence of Passenger Transportation Mode ................................................................. 256
Yuyan Yang, Bingmou Cui, Junwei Zeng

Dynamic Relationship Between Transportation Energy Consumption and Transportation Industry Growth ................................................................. 262
Jianwei Wang, Jie Gao
