# TABLE OF CONTENTS

1. **L1 Adaptive Controller and Its Application to Main Steam Temperature Process Control** ........................................... 1
   Chuan Wang, Shizhong Yang, Chengyu Cao, Xinsheng Lou, Carl Neuschaefer

2. **Two-Day Advanced Prediction of Blade Tear on the Steam Turbine at Coal-Fired Power Plant** .......................... 14
   Patrick Bangert

3. **Efficiency Increase of 1% in Coal-Fired Power Plants with Mathematical Optimization** .............................. 20
   P. Bangert, J.-A. Czernitzky

4. **Multiple Model Predictive Control with Performance Assessment Applied to a Supercritical Boiler Simulator** .......................................................... 27
   Shizhong Yang, Suresh Shenoy, Xinsheng Lou, Carl Neuschaefer

5. **Ontelaunee Energy Center Operational Improvements Using Advanced Controls** ....................................... 40
   Steven Leibbrandt, David Gibson, Bernd Fuetterer

6. **Preparing For a NERC CIP Audit** .......................... 52
   James E. Chance

7. **Getting Data from a Control System to the Masses While Maintaining Cybersecurity – The Case for “Data Diodes”** .......................................................... 65
   Barry W. Hargis

8. **Plant Performance Improvements by Enhanced Combustion Through Laser-based Optimization** .............. 74
   Sudha Thavamani, Matthias Behmann, Till Spreeth

9. **Load Share Control System for “Twin Pack” Turbo-Jet Power Units** .......................................................... 86
   Salvador DeLara-Jayme, Israel Chávez Estrada, Francisco Rafael Morales, Jesús Rosas Medellín

10. **Modeling and Control of a Nonlinear Electric Power Utility Boiler System** ................................................ 96
    Jeffrey Langston, Mike Harris, Michael Frye, Chunjiang Qian

11. **Robustness Enhancement of PID Cluster for a Nonlinear Power Plant Model with Time Delay** .................. 109
    Shu Zhang, Joseph Bentsman, Cyrus W. Taft

12. **Steam Temperature Control Using Cascade Control Loops** .......................................................... 130
    Allan Zadiraka

13. **Load Frequency Controller Design for Interconnected Electric Power System** ............................................. 143
    M. A. Mahmoud Tammam, M. A. Moustafa, M. A. E. S. Abo Ela

14. **Automation Advancements for Reduced Power Plant Operator Attendance: The Australian Experience** ........ 153
    Don Parker

15. **New Technology & Application for Drum Level Measurements** .......................................................... 165
    Vic Yu, Mingsi Cui, Guangyu Yang, Xiaohong Yue

16. **Thermocouple and Thermowell Response Time Study for Steam Temperature Control – Part II** .............. 184
    Blake Feltman, John N. Sorge, Cyrus W. Taft

    Wayne Manges, John N. Sorge, Cyrus W. Taft

18. **Enhanced Operational Flexibility of Combined Cycles Through Advanced Controls** .................................. 204
    Emrah Biyik, Chris E. Long, Fernando J. D’Amato, Steve Di Palma, Dean A. Baker

19. **Advances In Radar Level Measurement For Coal Power Applications** ................................................ 214
    Sheldon Y. Shepherd, John Dronette

20. **Sediment Pond Effluent pH Control** .......................... 222
    Donald A. Andrasik

21. **Troubleshooting and Solving Poor Control Loop Performance** .......................................................... 235
    Jacques F. Smuts

22. **Method of Automating an I&C FMEA** .......................... 247
    John Erinc, Jason Watts

23. **Advanced Control for Ancillary Service of Combined Cycle Power Plants** ............................................. 259
    D. Fauille, H. Guéguen, D. Dumur

24. **The Boiler-Model Based Unit Control in Once-Through Boilers** .......................................................... 270
    In-Young Chung, Kwi-Tae Kim

25. **Reconciling Compliance and Operation with Real Cyber Security in Nuclear Power Plants** .................. 281
    Erik L. Anderson

26. **Disturbance Modeling and Offset-Free Predictive Control for Solid Oxide Fuel Cell** ............................ 293
    Lei Pan, Jiong Shen
