2012 IEEE 25th Conference on Software Engineering Education and Training

(CSEE&T 2012)

Nanjing, China
17-19 April 2012
Table of Contents

Foreword ....................................................................................................................................................viii
Organizing Committee .......................................................................................................................................x
Program Committee .........................................................................................................................................xii
Steering Committee .......................................................................................................................................xv
Keynote ......................................................................................................................................................xvi
Concluding Session .......................................................................................................................................xvii

Full Papers
Changes in Transferable Knowledge Resulting from Study in a Graduate Software Engineering Curriculum .................................................................................................................................................................................3
   Ray Bareiss, Todd Sedano, and Edward Katz
A Role-Playing Game for a Software Engineering Lab: Developing a Product Line ..........................................................................................................................................................................................13
   Sara Zuppiroli, Paolo Ciancarini, and Maurizio Gabbielli
The Exploration and Practice of Gradually Industrialization Model in Software Engineering Education - A Factual Instance of the Excellent Engineer Plan of China .................................................................................................................................................................................23
   Shu Liu, Peijun Ma, and Dong Li
Learning to Write Programs with Others: Collaborative Quadruple Programming ..................................................................................................................................................................................32
   Ritu Arora and Sanjay Goel
Will They Report It? Ethical Attitude of Graduate Software Engineers in Reporting Bad News .............................................................................................................................................................................42
   A. S. M. Sajeev and Ivica Crnković
Delivering Software Process-Specific Project Courses in Tertiary Education Environment: Challenges and Solution ..........................................................................................................................................................................52
   Guoping Rong and Dong Shao
Experiences with Integrating Simulation into a Software Engineering Curriculum

Andreas Bollin, Elke Hochmüller, Roland Mittermeir, and Ladislav Samuelis

Workshops

Exploring the Computer Science 2013 Curriculum Guidelines

Richard LeBlanc and Michael Barker

Workshop on Collaborative Software Product Line Engineering

David M. Weiss and Dong Li

Tutorials

A Gentle Introduction to Learn by Doing

Ray Bareiss and Todd Sedano

Teaching Software Project Management using Simulations - The AMEISE Environment: from Concepts to Class Room Experience

Andreas Bollin, Elke Hochmüller, and Ladislav Samuelis

Engage Your Students by Teaching Computer Science Using Only Mobile Devices with TouchDevelop

Nikolai Tillmann, Michal Moskal, Jonathan de Halleux, Manuel Fahndrich, and Tao Xie

Pex4Fun: Teaching and Learning Computer Science via Social Gaming

Nikolai Tillmann, Jonathan de Halleux, Tao Xie, and Judith Bishop

Teaching and Training for Software Analytics

Dongmei Zhang, Yingnong Dang, Shi Han, and Tao Xie

Short Papers and Work-in-Progress Papers

Towards Teaching Software Craftsmanship

Todd Sedano

A Software Testing Tool for the Verification of Abstract Data Type Implementations from Formal Algebraic Specifications

Rafael del Vado Vírseda

Teaching Globally Distributed Software Development: An Experience Report

Eduardo Almeida, Li Dali, Stuart Faulk, Crescencio Lima, Zhang Rui, David Weiss, Jin Ying, Michal Young, and Lian Yu

Qing Ding, Xi Li, Ye Liu, and Zhu Shi

A New Model on the School-Enterprise Cooperation Curriculum Construction

Hongyan Mao, Ningkang Jiang, Wen Su, and Yan Zhang
The Effect of Checklist in Code Review for Inexperienced Students: An Empirical Study .................................................................120
   Guoping Rong, Jingyi Li, Mingjuan Xie, and Tao Zheng

An Experience of Teaching HCI to Undergraduate Software Engineering Students ..............................................................125
   Guihuan Feng and Bin Luo

Evaluation of Student Teamwork ........................................................................................................................................130
   Ondřej Macek and Martin Komárek

A Case Study of Group Communication Patterns in a Large Project Software Engineering Course .............................................134
   Bonnie MacKellar

A Method for Designing Software Engineering Educational Programs .................................................................139
   Mira Kajko-Mattsson

Panel Sessions

Research Directions for Software Engineering Education and Training .................................................................147
   Mike Barker

Involving Undergraduates in Research: Motivations and Challenges .................................................................148
   W. Eric Wong

Author Index .............................................................................................................................................149
