2012 IEEE Sixth International Conference on Software Security and Reliability

(SERE 2012)

Gaithersburg, Maryland, USA
20 – 22 June 2012
2012 IEEE Sixth International Conference on Software Security and Reliability
SERE 2012

Table of Contents

Message from the Steering Committee Chairs .............................................................. ix
Message from the General Chair ................................................................................ x
Message from the Program Chair .......................................................................... xii
Message from the SSCP Workshop Chairs ............................................................ xiii
Message from the MVV Workshop Chairs ............................................................. xiv
Conference Committees ......................................................................................... xv
Keynote Speech I .................................................................................................. xviii
Keynote Speech II ............................................................................................... xix
Keynote Speech III ............................................................................................... xx
Invited Talk I ........................................................................................................... xxi
Invited Talk II ......................................................................................................... xxii
Invited Talk III ...................................................................................................... xxiii

Session 1A: Software Reliability
A Control Flow Representation for Component-Based Software Reliability Analysis ........................................ 1
  Atef Mohamed and Mohammad Zulkernine
Applying Microreboot to System Software .............................................................. 11
  Michael Le and Yuval Tamir
Software Fault Localization Using DStar (D*) ....................................................... 21
  W. Eric Wong, Vidroha Debroy, Yihao Li, and Ruizhi Gao

Session 2A: System Security
Automatic Simplification of Obfuscated JavaScript Code: A Semantics-Based Approach ...................................................... 31
  Gen Lu and Saumya Debroy
Flexible Data-Driven Security for Android ............................................................ 41
  Denis Feth and Alexander Pretschner
Session 3A: Quality Analysis
An Autonomic Framework for Integrating Security and Quality of Service Support in Databases .................................................................51
Firas Alomari and Daniel A. Menascé

VRank: A Context-Aware Approach to Vulnerability Scoring and Ranking in SOA .................................................................61
Jianchun Jiang, Liping Ding, Ennan Zhai, and Ting Yu

Security Impacts of Virtualization on a Network Testbed .................................................................71
Yu-Lun Huang, Boriting Chen, Ming-Wei Shih, and Chien-Yu Lai

Session 4A: Verification & Validation
CRAX: Software Crash Analysis for Automatic Exploit Generation by Modeling
Attacks as Symbolic Continuations ..................................................................................................................78
Shih-Kun Huang, Min-Hsiang Huang, Po-Yen Huang, Chung-Wei Lai, Han-Lin Lu,
and Wai-Meng Leong

A Study of Using Two-Parameter Generalized Pareto Model to Analyze the Fault
Distribution of Open Source Software .............................................................................................................88
Chih-Song Kuo, Chin-Yu Huang, and Shao-Pu Luan

Amatul Mohosina and Mohammad Zulkernine

Session 4B: Safety & Validation
On the Effective Use of Security Test Patterns ..................................................................................................108
Ben Smith and Laurie Williams

Toward Systematic Construction of Timing Diagrams from UML/MARTE Behavioral
Models for Time-Triggered Embedded Software .............................................................................................118
Jinho Choi, Eunkyoung Jee, and Doo-Hwan Bae

A Precise Information Flow Measure from Imprecise Probabilities .............................................................128
Sari Haj Hussein

Session 5A: Algorithm & Measurement
Using Weighted Attributes to Improve Cluster Test Selection ........................................................................138
Yabin Wang, Zhenyu Chen, Yang Feng, Bin Luo, and Yijie Yang

Mobile Application and Device Power Usage Measurements ........................................................................147
Rahul Murmuria, Jeffrey Medsger, Angelos Stavrou, and Jeffrey M. Voas

Session 5B: Reliability Improvement
Specification-guided Golden Run for Analysis of Robustness Testing Results ............................................157
Gizelle Sandrini Lemos and Eliane Martins
Extending the Reliability of Wireless Sensor Networks through Informed Periodic Redeployment ................................................................. 167

Luiz A. Laranjeira and Genaina Nunes Rodrigues

Session 6A: Software Testing

Finding Buffer Overflow Inducing Loops in Binary Executables ................................................................. 177

Sanjay Rawat and Laurent Mounier

Accelerating Taint-Based Concolic Testing by Pruning Pointer Overtaint ............................................................. 187

Yun-Min Cheng, Bing-Han Li, and Shiuhpyng Winston Shieh

μTIL: Mutation-based Statistical Test Inputs Generation for Automatic Fault Localization ......................................................... 197

Mickaël Delahaye, Lionel C. Briand, Arnaud Gotlieb, and Matthieu Petit

Session 6B: Reliability Analysis I

An Embedded Software Reliability Model with Consideration of Hardware Related Software Failures ......................................................... 207

Jinhee Park, Hyeon-Jeong Kim, Ju-Hwan Shin, and Jongmoon Baik

Robust Wavelet Shrinkage Estimation without Data Transform for Software Reliability Assessment ......................................................... 215

Xiao Xiao and Tadashi Dohi

Session 7A: Access Control & Authentication

A Secure Fine-Grained Access Control Mechanism for Networked Storage Systems .............................................. 225

Hsiao-Ying Lin, John Kubiatowicz, and Wen-Guey Tzeng

Mitigating Insider Threat without Limiting the Availability in Concurrent Undeclared Tasks ......................................................... 235

Qussai Yaseen and Brajendra Panda

A New Non-Intrusive Authentication Method Based on the Orientation Sensor for Smartphone Users ......................................................... 245

Chien-Cheng Lin, Chin-Chun Chang, Deron Liang, and Ching-Han Yang

Session 8A: Web Security

Semi-Automatic Security Testing of Web Applications from a Secure Model ......................................................... 253

Matthias Büchler, Johan Oudinet, and Alexander Pretschner

Mining Executable Specifications of Web Applications from Selenium IDE Tests ......................................................... 263

Dianxiang Xu, Weifeng Xu, Bharath K. Bavikati, and W. Eric Wong

Countering Network-Centric Insider Threats through Self-Protective Autonomic Rule Generation ......................................................... 273

Faisal M. Sibai and Daniel A. Menascé
Session 9A: Reliability Analysis II

Reliability Analysis of PLC Systems by Bayesian Network ................................................................. 283
   Hehua Zhang, Yu Jiang, Xun Jiao, Xiaoyu Song, William N.N. Hung, and Ming Gu

Detection and Mitigation of Induced Low Rate TCP-Targeted Denial of Service
Attack ........................................................................................................................................................... 291
   Ferdous A. Barbhuiya, Vaibhav Gupta, Santosh Biswas, and Sukumar Nandi

Author Index .................................................................................................................................................. 301
