2012 IEEE Sixth International Conference on Software Security and Reliability Companion

(SERE-C 2012)

Gaithersburg, Maryland, USA
20 – 22 June 2012
Table of Contents

Message from the Steering Committee Chairs...........................................................................................ix
Message from the General Chair.................................................................................................................x
Message from the Program Chair.............................................................................................................xii
Message from the SSCP Workshop Chairs...............................................................................................xiii
Message from the MVV Workshop Chairs...............................................................................................xiv
Conference Committees......................................................................................................................................xv
Keynote Speech I................................................................................................................................................xviii
Keynote Speech II.................................................................................................................................................xix
Keynote Speech III................................................................................................................................................xx
Invited Talk I..........................................................................................................................................................xxi
Invited Talk II.......................................................................................................................................................xxii
Invited Talk III....................................................................................................................................................xxiii

SERE 2012 – Student Doctoral Program

Virtual Machine Replay Update: Improved Implementation for Modern Hardware Architecture .................................................................1
Jiageng Yu, Peng Zhou, Yanjun Wu, and Chen Zhao

Integrating Network Cryptography into the Operating System ........................................................................7
Anthony Gabrielson and Haim Levkowitz

A Novel Security Scheme for Online Banking Based on Virtual Machine ..................................................12
Bei Guan, Yanjun Wu, and Yongji Wang

A Survey of Software Testing in the Cloud ....................................................................................................18
Koray İnçki, İsmail Ari, and Hasan Sözer

A Novel Method for Modeling Complex Network of Software System Security ......................................................24
Li Hailin, Wang Yadi, and Han Jihong
Thinking Towards a Pattern Language for Predicate Based Encryption
Crypto-Systems ..........................................................................................................................................................27

Jan de Muijnck-Hughes and Ishbel Duncan

SERE 2012 – Fast Abstract
Hybrid Bayesian Network Models for Predicting Software Reliability .........................................................33

Mark Blackburn and Benjamin Huddell

A Framework for Automated Security Testing of Android Applications on the Cloud ........................................35

Sam Malek, Naeem Esfahani, Thabet Kacem, Riyadh Mahmood, Nariman Mirzaei, and Angelos Stavrou

Path-oriented Test Data Generation Driven by Component Linear Fitting Functions ........................................37

Wenxu Ding, Xin Chen, Peng Jiang, Nan Ye, Lei Bu, and Xuanlong Li

Formal Verification of OSEK/VDX Real-Time Operating System (Empirical Report) .................................39

Jianqi Shi, Huixing Fang, Huibiao Zhu, and Xin Ye

Intelligent Biological Security Testing Agents ..................................................................................................41

Ishbel MacDonald Duncan

Attestation & Authentication for USB Communications ..................................................................................43

Zhaohui Wang and Angelos Stavrou

Analysis of Android Applications’ Permissions ..............................................................................................45

Ryan Johnson, Zhaohui Wang, Corey Gagnon, and Angelos Stavrou

Workshop on Information Assurance (IA 2012)
Towards a Model Based Security Testing Approach of Cloud Computing Environments ..............................47

Philipp Zech, Michael Felderer, and Ruth Breu

Designing System Security with UML Misuse Deployment Diagrams ............................................................57

Susan J. Lincke, Timothy H. Knautz, and Misty D. Lowery

A Proposal to Prevent Click-Fraud Using Clickable CAPTCHAs .................................................................62

Rodrigo Alves Costa, Ruy J.G.B. de Queiroz, and Elmano Ramalho Cavalcanti

Comparing Static Security Analysis Tools Using Open Source Software ......................................................68

Ryan K. McLean

Undesirable Aspect Interactions: A Prevention Policy for Three Aspect Fault Types .......................................75

Arsène Sabas, Subash Shankar, Virginie Wiels, and Michel Boyer
Revising a Security Tactics Hierarchy through Decomposition, Reclassification, and Derivation .................................................. 85
Jungwoo Ryoo, Phil Laplante, and Rick Kazman

Enforcement of Role Based Access Control in Social Network Environments ................................................................. 92
Junhua Ding and Lian Mo

Mapping of Security Concerns in Design to Security Aspects in Code .......................................................... 102
Chase Baker and Michael Shin

Secure PC Platform Based on Dual-Bus Architecture ..................................................................................... 111
Heshem A. El Zouka

A Privacy Preserving Smart Metering System Supporting Multiple Time Granularities .................................................. 119
Hsiao-Ying Lin, Shiuan-Tzuo Shen, and Bao-Shuh P. Lin

An Investigation of Classification-Based Algorithms for Modified Condition/Decision Coverage Criteria .................................................. 127
Jun-Ru Chang, Chin-Yu Huang, and Po-Hsi Li

Workshop on Safety and Security in Cyber-Physical Systems (SSCPS 2012)

Lattice-Valued Kripke Structures Based on Complete Residuated Lattice ................................................................. 137
Haiyu Pan, Min Zhang, and Yixiang Chen

Invalid Pointer Dereferences Detection for CPS Software Based on Extended Pointer Structures .................................................. 144
Longming Dong, Wei Dong, and Liqian Chen

Modeling and Simulating CAN-Based Cyber-Physical Systems in Modelica ................................................................. 152
Chen Liping, Wang Xiaoping, Gong Xiong, Zhang Hongchang, Zhou Fanli, Gu Bin, and Wang Lei

A New Approach of Partial Order Reduction Technique for Parallel Timed Automata Model Checking .................................................. 158
Xiaoyu Zhou, Qian Li, and Jianhua Zhao

Bodhi: Detecting Buffer Overflows with a Game ..................................................................................... 168
Jie Chen and Xiaoguang Mao

Study of Safety Analysis and Assessment Methodology for AADL Model ................................................................. 174
Deming Song, Yunwei Dong, Fan Zhang, Hong Huo, and Bin Gu

Hazardous Chemicals Vehicles Rollover Pre-warning System Based on CPS .................................................. 184
Xuesong Cai and Junwei Wu

Cyber-physical Systems Modeling Method Based on Modelica ................................................................. 188
Tang Junjie, Zhao Jianjun, Ding Jianwan, Chen Liping, Xie Gang, Gu Bin, and Yang Mengfei
Workshop on Metrics and Standards for Software Testing (MaSST 2012)

Software Testing of Business Applications .............................................................. 192
  Vijay Sampath and Vipul Shah

Paradigm in Verification of Access Control .............................................................. 193
  JeeHyun Hwang, Vincent Hu, and Tao Xie

Viewpoint-based Test Architecture Design ............................................................. 194
  Yasuharu Nishi

Workshop on Model-Based Verification & Validation (MVV 2012)

Testing is an Event-Centric Activity ...................................................................... 198
  Fevzi Belli, Mutlu Beyazit, and Atif Memon

Cost Reduction through Combining Test Sequences with Input Data ...................... 207
  Benedikt Krüger and Michael Linschulte

Author Index ............................................................................................................ 217
