# TABLE OF CONTENTS

**Volume 1**

**Design and Mathematical Modeling of GNSS Based Attitude Determination of ICUBE-1: The Technology Experiment** ................................................................. 1  
Najam Naqvi, Yang Sun, Li Yanjun

**Attitude Determination Based on Solution of System of Polynomials via Homotopy Continuation** .......................................................... 14  
Yang Cheng, John Crassidis

**Geometric Integration of Quaternions** ......................................................... 30  
Michael Andrle, John Crassidis

**A Survey of Attitude Error Representations** .............................................. 42  
A. Bani Younes, J. Turner, D. Mortari, J. Junkins

**Optimization of Low-Thrust Spiral Trajectories by Collocation** ............... 58  
Robert Falck, John Dankanich

**Asymptotic Solution for the Two-Body Problem with Low-Thrust** ............ 75  
Manuel Sanjurjo-Rivo, Claudio Bombardelli, Jes Pelaez

**Quasi-Newton Differential Dynamic Programming for Robust Low-Thrust Optimization** .......................................................... 93  
Etienne Pellegrini, Ryan Russell

**Low-Thrust Trajectories for Human Missions to Ceres** ................................ 112  
Frank Laipert, James Longuski

**Earth Orbit Raise Design for the ARTEMIS Mission** ................................... 124  
Gregory Whiffen, Theodore Sweetser

**Spacecraft Thermal and Optical Modeling Impacts on Estimation of the GRAIL Lunar Gravity Field** ....................................................... 139  
Eugene Fahnestock, Ryan Park, Dah-Ning Yuan, Alexander Konopliv

**Design of an Extended Mission for GRAIL** ............................................... 156  
Theodore Sweetser, Mark Wallace, Sara Hatch, Ralph Roncoli

**Optimizing the Perilune of Lunar Landing Trajectories Using Dynamical Systems Theory** .......................................................... 175  
David Spencer, Ke Liang, Jianping Yuan

**Earth-to-Moon Low Energy Transfer Using Time-Dependent Invariant Manifolds** ....................................................... 196  
Rui Qi, Shijie Xu, Yao Zhang, Yue Wang

**Planning-based Autonomous Lander Control** ......................................... 207  
Johannes Lohr, Bernhard Nebel, Stefan Winkler
Cassini Solstice Mission Maneuver Experience: Year Two ............................................................ 218
Juan Arrieta-Camacho, Sean Wagner, Yungsun Hahn, Paul Stumpf, Powtawche Williams, Christopher Ballard

An Adaptive, Receding-horizon Guidance Strategy for Solar Sail Trajectories ........................................ 233
Geoffrey Wawrzyniak, Kathleen Howell

Mars Atmospheric Entry Guidance via Multiple Sliding Surface Guidance for Reference Trajectory Tracking .......................................................... 251
Roberto Furfaro, Daniel Wibben

Fisher Information Based Analysis of Deterministic Relative Attitude Observability in Planar Vehicle Formations ............................................................................................................... 267
Christopher Nebelecky, John Crassidis, Baro Hyun, Yang Cheng

Coordinated Attitude Control for Heterogeneous Spacecraft Formation Missions ......................................................................................................................... 283
Leonard Felicetti, Giovanni Palmerini

Decentralized Mean Orbit-Element Formation Guidance, Navigation, and Control: Part 1 ................................................................. 302
Marcus Holzinger, Jay McMahon

Decentralized Mean Orbit-Element Formation Guidance, Navigation, and Control: Part 2 ............................................................................. 315
Jay McMahon, Marcus Holzinger

Automated Interplanetary Trajectory Planning .................................................................................... 335
Jacob Englander, Bruce Conway, Trevor Williams

Solar Electric Propulsion Gravity-Assist Tours for Jupiter Missions ....................................................... 356
Nathan Strange, Damon Landau, Richard Hofer, Thomas Randolph, Stefano Campagnola, James Szabo, Bruce Pote

Solving Coplanar Orbit Rendezvous Problem by Primer Vector Approximation Method .......................................................... 365
Weijun Huang

Optimization of time-open Constrained Lambert Rendezvous using Interval Analysis ................................................................. 388
Tong Chen, Erik-Jan Van Kampen, Hui Yu, Q. Ping Chu

A Method for Computing Derivatives in MATLAB ................................................................................. 416
Matthew Weinstein, Michael Patterson, Anil Rao

Autonomous Interplanetary Trajectory Planning Using Structured-Chromosome Evolutionary ........................................................................ 424
Hui Meen Nyew, Ossama Abdelkhalik, Nilufer Onder

Spacecraft Swarm Guidance Using a Sequence of Decentralized Convex Optimizations ................................................................. 453
Daniel Morgan, Soon-Jo Chung, Fred Hadaegh

Hybrid Periodic Differential Element Control Using the Geomagnetic Lorentz Force ................................................................. 469
Ludwik Sobiesiak, Chris Damaren
Impulsive Feedback Control of Nonsingular Elements in the Geostationary Regime
Paul Anderson, Hanspeter Schaub

Optimal Formation Reconfiguration by Using Generating Functions: Applications to the Hill Three-Body Problem
Ji Hyun Yang, Chandeok Park

Simple Open-Loop and Closed-Loop Guidance Strategies for Low-Thrust Spacecraft
Rosemary Huang, Martin Corless, Inseok Hwang

Orbit-State Model Selection for Solar-Sailing Mission Optimization
Erwin Mooij

A Direct Optimization Based Tool to Determine Orbit-Raising Trajectories to GEO for All-Electric Telecommunication Satellites
Atri Dutta, Paola Libraro, N Jeremy Kasdin, Edgar Choueiri

Pradipto Ghosh, Bruce Conway

Search and Representation Strategies for Automated Trajectory Design
Eric Trumbauer, Benjamin Villac

GPU Accelerated Genetic Algorithm for Multiple Gravity-Assist and Impulsive ΔV Maneuvers
Sam Wagner, Bong Wie

Transfers to Earth-Moon L₃ Halo Orbits
Kathryn Davis, George Born, Eric Butcher, Masoud Deilami, Annie Larsen

Stability and Control of Tethered Satellite Formations
Jean Slane, Steven Tragesser

Space Webs Dynamics and Configuration Control by means of Reaction Wheels
Leonard Felicetti, Giovanni Palmerini

Modeling and Analysis of the Electrodynamic Tether Sling
Michael Mueterthies, James Longuski

Performance of a Heliogyro Blade Twist Controller with Finite Bandwidth
Daniel Guerrant, William Wilkie

Design Criteria of Spinning Solar Sail Surface Based on Attitude Dynamics
Yuichi Tsuda, Ryu Funase, Yuya Mimasu, Yoshinobu Okano

Dynamic Implementation of the Celestial Navigation (CelNav) Technique for Extraterrestrial Surface Navigation
Jared Perkins, Tyler Wills, Amy Underwood, May Win Thein

LiAISON-Supplemented Navigation for Geosynchronous and Lunar L₄ Orbiters
Jason Leonard, Ryan McGranaghan, Kohet Fujimoto, George Born, Jeffrey Parker, Rodney Anderson
Strategy for Optimal, Long-Term Stationkeeping of Libration Point Orbits in the Earth-Moon System ................................................................. 765
Thomas Pavlak, Kathleen Howell

Regions Near the Libration Points Suitable to Maintain Multiple Spacecraft ............ 781
Aurelie Heritier, Kathleen Howell

Optimal Transfers with Guidance to the Earth-Moon L1 and L3 Libration Points using Invariant Manifolds: A Preliminary Study .................................................. 801
Annie Larsen, Thomas Critz, William Anthony, Morad Nazari, Masoud Deilami, Eric Butcher, George Born, Jay McMahon

Mission and Navigation Design of Integrated Trajectories to $L_{4,5}$ in the Sun-Earth System ........................................................................................................ 820
Pedro Llanos, James Miller, Gerald Hintz

Attitude Parameter Inspired Descriptions of Relative Orbital Motion ....................... 839
Erik Hogan, Hanspeter Schaub

Deployment of a Two-Spacecraft Formation into a Highly Elliptic Orbit with Collision Avoidance .................................................. 854
Francesco Simeoni, Lorenzo Casalino, Alessandro Zavoli

Collinear Three-Craft Coulomb Formation Stability Analysis and Control .............. 866
Drew Jones, Hanspeter Schaub

Continuous-Thrust Cooperative Guidance Law for Disaggregated Satellites .......... 880
Leonel Mazal, Giorgio Mingotti, Pini Gurfil

Long-term Semi-analytical Orbit Propagation Tool for Future European Launchers' Design .................................................................................. 898
Bruno Correia Da Costa, Morena Bernardini, Morgane Fessard, Stephane Reynaud

Computational Efficiency of Symplectic Integrators for Space Debris Orbit Propagation .................................................................................. 917
David Surovik, Daniel Scheeres

Long-term Dynamics of HAMR Objects in HEO .................................................. 934
Aaron Rosengren, Daniel Scheeres

Preliminary Analysis of Establishing Cycler Trajectories Between Earth and Mars via $V_\infty$ Leveraging .................................................. 954
Blake Rogers, James Longuski

Mars Reconnaissance Orbiter Navigation Support Strategy for Mars Science Laboratory Entry, Descent and Landing Relay Communication .............. 965
Jessica Williams, Premkumar Menon, Stuart Demcak

Low Lunar Orbit Design via Graphical Manipulation of Eccentricity Vector Evolution .................................................................................. 979
Mark Wallace, Theodore Sweetser, Ralph Roncoli

Automated Inclusion of n-pi Transfers in Gravity-Assist Flyby Tour Design .......... 987
Demyan Lantukh, Ryan Russell
Volume 2

Geometric Analysis and Design Method for Discontinuous Coverage
Satellite Constellations .............................................................. 1007
Yuri Ulybyshev, S. P. Korolev Rocket

Modified Molniya Orbits for Solar Power Arrays .......................... 1024
Paul Christopher

Optimizing Flower Constellations for Global Coverage .................. 1040
Daniel Casanova, Martin Avendano, Daniele Mortari

Real Time Tracking of Geostationary Satellites in Sub Arc Second Accuracy ...... 1058
Jizhang Sang, Craig Smith

An AEGIS-FISST Algorithm for Multiple Object Tracking in Space
Situational Awareness .............................................................. 1068
Islam Hussein, Kyle Demars, Carolin Frueh

The Effects of Uncertainty Propagation on Dynamic Sensor Tasking .......... 1088
Patrick Williams, David Spencer

Riding the Banzai Pipeline at Jupiter: Balancing Low ∆V and Low Radiation to Reach Europa ...................................................... 1107
Timothy McElrath, Stefano Campagnola, Nathan Strange

Efficiently Locating Impact and Escape Scenarios in Spacecraft
Reachability Sets ...................................................................... 1120
Erik Komendera, Elizabeth Bradley, Daniel Scheeres

Precise Autonomous Orbit Control in Low Earth Orbit .................. 1135
Sergio De Florio, Simone D’Amico, Gianmarco Radice

A Preliminary Analysis of Small Spacecraft Finite-Thrust Aeroassisted Orbital Transfer ......................................................... 1158
Begum Senses, Anil Rao

Utilizing Uncertainty Information in Early Model Validation ............ 1173
Magnus Carlsson, Soren Steinkellner, Hampus Gavel, Johan Olvander

Characterization of Eddy Currents for Space Actuation .................. 1185
Benjamin Reinhardt, Mason Peck

Pointing Error Metrics: Displacement, Smear, Jitter, and Smitter with Application to Image Motion MTF .................................................. 1195
Mark Pittelkau, William McKinley

Hybrid Modeling Technique Applied to NASA’s Magnetospheric MultiScale (MMS) Mission TableSat Generation IB (TableSat IB) .......... 1214
Jason Medas, May Win Thein

Attitude Control for Chip Satellites using Multiple Electrodynamic Tethers ...... 1225
Lorraine Weis, Mason Peck
Momentum Envelopes and Steering of Control Moment Gyroscope Clusters .......... 1490
Ozan Tekinalp

Local Orbital Debris Flux Study in the Geostationary Ring ............................................ 1498
Paul Anderson, Hanspeter Schaub

Attitude Dynamics Simulation of MLI Space Debris Objects in Geosynchronous Earth Orbits ................................................................. 1511
Carolin Fruh, Thomas Kelecy

Short and Middle Term Uncontrolled Re-entry Monitoring Using Public Space Debris Catalogues .............................................................. 1529
Juan Carlos Dolado Perez, Armand Hedon

Impact of Non-Gaussian Error Volumes on Conjunction Assessment Risk Analysis .................................................................................. 1543
Richard Ghrist, Dragan Plakalovic

A method of Estimating Atmospheric Mass Density from Precise Orbit Solution ......................................................................................... 1559
Jizhang Sang, Craig Smith, Kefei Zhang

Orbit Propagation Using Gauss-Legendre Collocation ............................................................. 1570
Brandon Jones

Dynamical Properties of Geostationary Transfer Orbits over Long Time Scales: Consequences for Mission Analysis and Lifetime Estimation ..... 1586
Vincent Morand, Alain Lamy, Clemence Le Fevre, Hubert Fraysse, Florent Deleflie

J₂-Propelled Orbits and Constellations .............................................................................. 1609
Daniele Mortari, Martin Eugenio Avendano, Sanghyun Lee

Dynamics of a Thrusting, Spinning Satellite with Changing Center of Mass Position ...................................................................................... 1620
S. Lauren McNair, Steven Tragesser

Analytical Solution of the Motion of Spinning Thrusting Spacecraft with Transverse Ramp-Up Torques ................................................................ 1632
Mohammad Ayoubi, Kaela Martin, James Longuski

Global Feedback Control for Attitude Maneuvers of a Spacecraft by Two Reaction Wheels ........................................................................... 1647
Haichao Gui, Lei Jin, Shijie Xu

A Hierarchical Tree Code Based Approach for Efficient Conjunction Analysis ......................................................................................... 1661
Michael Mercurio, Puneet Singla, Abani Patra

Performance Assessment of the EOS Space Debris Tracking System ............................................ 1673
Jizhang Sang, Craig Smith

Orbital Dynamics of Earth-orbiting Particles under Perturbing Forces ............................................ 1685
Bindu Jagannatha, Victoria Coverstone

Identifying and Quantifying Mis-Modeled Dynamics via Optimal Control Problem Distance Metrics ............................................................................... 1704
Daniel Lubey, Daniel Scheeres
Modeling and Estimating the Yarkovsky Effect on Asteroid 1999 RQ36 ........................................... 1723
John Basart, Erik Goetzke, Christian Setzer, Bong Wie

Analysis of Gravity-Gradient-Perturbed Attitude Dynamics on a Stationary Orbit Around an Asteroid via Dynamical Systems Theory ......................................................... 1740
Yue Wang, Shijie Xu

Mission Analysis for a Temporary Geocentric Asteroids .......................................................... 1750
John Kidd, Roberto Furfaro, Michael Cupples, Carl Hergenrother, Daniel Wibben, Dante Lauretta

Development of Rosetta's Initial Stage Comet Rendezvous Guidance Systems ................................................................. 1761
David Wokes, Jan Essert

Efficient Estimation and Uncertainty Quantification in Space Mission Dynamics ............................................................. 1776
Piyush Grover, Yuki Sato

Statistical Orbit Determination using the Particle Filter for Incorporating non-Gaussian Uncertainties ................................................................. 1786
Alinda Mashiku, James Garrison, Russell Carpenter

Precise Orbit Determination with Satellite Laser Ranging Observations Using a Batch Filter Based on Particle Filtering .......................................................... 1798
Young Rok Kim, Sang-Young Park, Chandeok Park, Eun-Seo Park, Hyung-Chul Lim

Accurate Propagation of Initial Uncertainty in the Two Body Problem ........................................ 1824
Mrinal Kumar

A Survey of Mission Opportunities to Trans-Neptunian Objects - Part II, Orbital Capture ................................................................................................................ 1831
Ashley Gleaves, Randall Allen, Adam Tupis, John Quigley, Adam Moon, Eric Roe, David Spencer, Nicholas Youst, James Lyne

Orbital Operations for Phobos and Deimos Exploration .......................................................... 1845
Mark Wallace, Jeffrey Parker, Daniel Grebow, Nathan Strange

Aerobraking Challenges for a Combined Mars Orbiter and Lander in 2018 .......................... 1855
Daniel Lyons

Europa Multiple-Flyby Trajectory Design ........................................................................ 1872
Brent Buffington, Stefano Campagnola

Search & Selection for Future Flyby Targets for the DI/EPOXI Spacecraft ................................................................. 1892
Daniel Grebow, Shyam Bhaskaran, Steven Chesley

Integrated Guidance and Attitude Control for Asteroid Proximity Operations Using Higher Order Sliding Modes ................................................................. 1902
Daniel Wibben, Roberto Furfaro

Robust Spacecraft Hovering Near Small Bodies in Environments with Unknown Dynamics Using Reinforcement Learning .......................................................... 1920
Brian Gaudet, Roberto Furfaro
Using Solar Arrays for Orbital Control Near Small Bodies. Trade-offs
Characterization

Benjamin Villac, Gibert Ribalta

1940

Autonomous Aerobraking Development Software: Phase One Performance
Analysis at Mars, Venus, and Titan

Robert Maddock, Angela Bowes, Alicia Dwyer-Cianciolo, Jill Prince, Richard Powell

1957

Deimos Rendezvous Orbit Design for the MERLIN Mission

Yanping Guo, Johns Hopkins

1978

Understanding and Utilizing Properties of Phase Space near a Periodic Orbit for the Jupiter Europa Orbiter

Dylan Boone, Daniel Scheeres

1989
