Food, Pharmaceutical and Bioengineering Division

Core Programming Topic at the 2012 AIChE Annual Meeting

Pittsburgh, Pennsylvania, USA
28 October - 2 November 2012

Volume 1 of 2

ISBN: 978-1-62276-728-1
## TABLE OF CONTENTS

**Volume 1**

**Topical Plenary: Nanotechnology and Bioengineering in an Evolving Chemical Engineering World: The Next Generation of Recognitive, Intelligent Medical Microdevices**
Nicholas A. Peppas .......................................................... 1

**Modular Biosynthesis for the Production of Advanced Fuels and Chemicals**
Ramon Gonzalez ............................................................... 2

**Production of Bioethanol From Saccharomyces Pastorinus and Escherichia Coli Using a Two-Stage Fermentation Process**
Yogender Kumar Grewath, Kristen P. Miller, J. Michael Henson, Sarah W. Harcum ................................................................. 3

**Engineering Acetogenic Clostridia for Ethanol and n-Butanol Production From CO₂**
Chih-Chin Chen, Shang-Huan Yang ........................................... 4

**Bacteria Engineered to Produce the Chiral Building Block (S)-Styrene Oxide From Renewable Feedstocks**
Rebekah McKenna, Shawn Pugh, Matthew Sawtelle, David R. Nielsen ................................................................. 5

**A Synthetic E. Coli Consortium for Efficient Conversion of Hexose and Pentose Monomers and Oligomers to Isobutanol**
Alissa Kerner, Jeremy J. Miny, Bruce E. Dale, Venkatesh Balan, Xiaoxia (Nina) Lin ................................................................. 6

**High-Yield and High-Titer n-Butanol Production From Lignocellulosic Biomass by Engineered Clostridium Tyrobutyricum**
Peng Wang, Yi Tang ............................................................... 7

**Engineering the Cyanobacterium Synechococcus Sp. PCC 7002 to Produce Commodity Chemicals**
Matthew B. Begemann, Daniel Mendez-Perez, Brian F. Pfleger ................................................................. 8

**Heterologous Expression of Three Tetracycline Biosynthetic Pathways and Identification of New Tailoring Enzymes**
Peng Wang, Yi Tang ............................................................... 9

**Synthetic Biology Enabled Refactoring of Cryptic Fungal Gene Clusters for Natural Product Discovery**
Ryan E. Cobb, Huimin Zhao .......................................................... 10

**Development of a Synthetic Biology Approach to Demystify the Target Cryptic Pathway for Novel Natural Product Discovery**
Yunzi Luo, Zengyi Shao, Huimin Zhao .......................................................... 11

**Towards Understanding the Kinetic Enhancements in Spatially Organized Multi-Enzyme Structures**
Jian-Liang Lin, Ian Wheeldon .......................................................... 12

**Solvent-Enhanced Biotransformations of Chemicals by Beauveria Bassiana As Biocatalyst**
Richard Gonzalez, Tonya L. Peeples .......................................................... 13

**Nitroreductases: A Biocatalytic Alternative to Produce Aromatic Amines**
Jonathan T. Park, Yanto Yanto, Kyle Ferguson, Andreas S. Bommarius .......................................................... 14

**Enzymatic Oligomerization of Resveratrol to Generate Novel Anti-Microbial Analogs**
Namita Bhan, Mauricio Mora-Pale, Julia Wood, Jonathan S. Dordick, Mathewos A. G. Koffas .......................................................... 15

**Aryl-Aldehydes in Fungal Polyketides: Discovery and Characterization of Novel Biosynthesis Pathways**
Tzu-Chiang Han, David W. Wood .......................................................... 16

**Chemical Grafting of Chromatographic Resins for the Selective Adsorption of Pegylated Proteins**
Aguilar Oscar, Hernández-Martínez Agustín .......................................................... 18

**Control of Intein-Mediated Recombinant Protein Purification in a Chinese Hamster Ovary (CHO) Cell Expression System**
Tzu-Chiang Han, David W. Wood .......................................................... 20

**Excipients Removal by Capto S Chromatography and UF/DF Process Development for High-Concentration Drug Substance Production**
Ryan K. Swanson, Ruo Xu, Dan Netleton, Charles E. Glatz .......................................................... 21

**Designing in Process Robustness: Minimizing Proteolysis Through Analytical and Chromatographic Tools**
Janelle Konezko, Andrew Englehart, Thomas Svah, Adam Kristofo, Marc Wenger, Michael E. Laska, Aaron R. Goerke .......................................................... 22

**Proteomics Based Multivariate Random Forest Method for Prediction of Protein Separation Behavior During Downstream Purification**
Ryan K. Swanson, Ruo Xu, Dan Netleton, Charles E. Glatz .......................................................... 23

**Virus Purification by Aqueous Two Phase Extraction System**
Meng Wang, Huimin Zhao .......................................................... 24

**The Effect of Single-Use Retentate Recycle Bag Design On Diafiltration Efficiency**
David M. Bohonak, Elizabeth Goodrich .......................................................... 25

**Flux Enhancement in Recycling Cellulase From Enzymatic Hydrolyzate of Acid Treated Wheat Straw by Electroultrafiltration**
Guoqiang Chen, Tinhua Wan .......................................................... 26

**A Nuclear Rheostat That Couples Microenvironment Rigidity to Cell Lineage**
Nicholas A. Peppas .......................................................... 27

**Nuclear Mechanics of VEGF-Stimulated Endothelial Cells**
Stephen T. Spagnol, James S. Welz, Kris Noel Dahl .......................................................... 28
Expression and Characterization of Three Trichoderma Reesei Cellulose Hydrolases in Kluyveromyces Lactis ..............................................65
Michael J. Broder-Campbell, David R. Shonnard

Functional Self-Assembly of Artificial Cellulosomes for Efficient Cellulose Hydrolysis .................................................................67
Qing Sun, Sheng-Long Tsai, Bhavna Madan, Wilfred Chen

The Interaction of a Bacterial Toxin (Aggregatibacter actinomycetemcomitans leukotoxin) with Its Receptor Depends On Both Lipid-Protein and Protein-Protein Interactions ..................................................68
Angela C. Brown, Patrik Nygren, Kathleen Boeze-Battaglia, Edward T. Lally

The Pivotal Role of Motifs: Elucidating Mechanisms of Heterologous GPCR Expression and Trafficking in Yeast Through Chimeric Receptors ...................................................................................................................................................................................70
Carissa M. Monast, Matthew J. Lazzara

Silencing g.(1,3)Fucosyltransferases in Human Leukocytes Reveals Differences in E-Selectin Ligand Synthesis Between Humans and Mice ................................................................................................................................................................................................................. 72
Alexander Buffone Jr., Nandini Mondal, Kyle P. McHugh, Joseph T. Y. Lau, Sriram Neelamegham

Analysis of Time Scales Involved in Ligand-Mediated Endocytosis of the EGF Receptor ........................................................................74
Calixte S. Monast, Matthew J. Lazzara

TLR4 Signals Via a Novel Allosteric Switch-Like Mechanism ..............................75
Sophia Carrell

Feedback Control of Gene Expression in Tissue Patterning ...............................76
Sophia Carrell

Functional Single-Cell Analysis of T-Cell Activation by Supported Lipid Bilayer Tethered Ligands On Arrays of Nanowells ........................................................................................................................................................................................................... 77
Alexis J. Torres, Rita Lucia Contento, Susana Gardo, Kai W. Wucherpfennig, J. Christopher Love

Cell-Cell Contact Regulates Myogenic Fate Differentiation of Mesenchymal Stem Cell Through OB-Cadherin ....................................................................................................................................................................................................................... 78
Stella Ailamperti, Stelios T. Andreadis

Synthetic Autoinducer-2 Triggered Expression for Quorum Sensing Surveillance ................................................................................................................................................................................................................................................................. 79
Jessica Terrell, Hsuan Chen Wu, Chenyu Tsao, Matthew Servinsky, William Bentley

Microelectrode Analysis of an Artificial Phototrophic Biofilm Consortia Reveals a Positive Feedback Basis of Syntrophic Interactions ........................................................................................................................................................................................................................................................................ 80
Hans C. Bernstein, Alissa Bleem, Ross P. Carlson

Design and Construction of Synthetic Fungi-Bacteria Consortia for Direct Production of Isobutanol From Cellulosic Feedstocks ........................................................................................................................................................................................................................................................................ 81

Peptide-Based Communication Platform for Interspecies Communication ................................................................................................................................................................................................................................................................. 82
Nicholas Marchand, Cynthia H. Collins

The Growth Promoting Effect of Symbiotic Bacteria On Chlorella Vulgaris ................................................................................................................................................................................................................................................................. 83
Yen Wah Tong, Zhi Guo

Effects of Quorum-Signaling Molecules On Human Epithelial Cells: Implications for Interkingdom Response and Communication ........................................................................................................................................................................................................................................................................ 84

Synthetic Microbes Engineered to Fight Human Pathogens ........................................................................................................................................................................................................................................................................ 85
Mai Hua Tan, Choon Kit Wong, Naznin Saсидi, Tat-Ming Lo, In Young Hwang, Chuee Loo Poh, Matthew Wook Chang

Inducible Cell Communication Amplifies Salmonella Gene Expression In Tumor Tissue ........................................................................................................................................................................................................................................................................ 86
Neil S. Forbes, Yumei Dai, Charles Swooford, Bhusan J. Toley

Nanoparticle Cancer Therapeutics: Concept to Clinic ........................................................................................................................................................................................................................................................................ 87
Mark E. Davis

Multi-Reservoir Drug Therapies...From Academic Lab to Startup Company to Clinical Demonstration ........................................................................................................................................................................................................................................................................ 88
John T. Santini Jr.

Transdermal Drug Delivery: Translation From Chemical Engineering Laboratories Into the Clinic ........................................................................................................................................................................................................................................................................ 89
Samiр Mitragotri

New Approaches to Treating Brain Tumors ................................................................90
Gary Gallia, Betty Tyler, Henry Brem

Engineering Enzymes Using Nonnatural Amino Acids ........................................................................................................................................................................................................................................................................ 91
Shun Zhang, Sung In Jun, H. Edward Wong, Inchan Kwon

Enzyme Biocatalysis Orientation Control During Immobilization by Unnatural Amino Acid Incorporation ........................................................................................................................................................................................................................................................................ 92
Bradley C. Bundy, Jefferу C. Wu, Mark T. Smith, Chad T. Varner

Efficient Stereoselective Synthesis of Ethyl (R)-2-Hydroxy-4-Phenybutyrate by a Bacterial Reductase Coupled with Cofactor Regeneration ........................................................................................................................................................................................................................................................................ 94
Ye Ni, Yunteг Su, Zhiihao Sun

Enantioselective Reduction of Alpha-Bromo Aromatic Ketones Using Carrot Cells ........................................................................................................................................................................................................................................................................ 96
Yi Wang, Jianmiao Li, Xiang Liu, Jianhe Xu

In Situ Real-Time Monitoring of Biotransformations ........................................102
Sean Casacuс, Vlachос Vlachос

Amphiphilic Macromolecules to Manage Atherosclerosis: Quantitative Structure Activity Relationships ........................................................................................................................................................................................................................................................................ 103
Daniel R. Lewis, Vladyslav Khoslaovych, Li Gu, Davanne Poree, Kathryn E. Ulrich, Prabhas V. Moghe

Investigation of Hemicellulase Inhibition in the Production of Bioethanol ..........................................................................................................................349

Increased Enzyme Binding to Substrates Does Not Always Increase Catalytic Activity .................................................................................................350

Biodistribution and Cellular Uptake Upon Intranasal Administration of Monodisperse Biodegradable Particles ...............................................................351

Potential Pharmaceutical Applications of Uniform-Sized Chitosan Micro/Nanospheres with Autofluorescent Property .................................................354

Preparation of Polymeric Micro-Nano-Spheres Using a Microfluidic Approach for Delivery of Nutraeuticals .................................................................355

A Novel Approach for Transformation of Nanosuspensions Into Polymer Films Containing Nanoparticles .................................................................356

Magnetic Resonance Imaging As a Powerful Tool for Visualizing Controlled Release From Biodegradable Microparticles ........................................357

Recent Advances in Bioprocess Development for Mass Production of Medicinal Polysaccharides and Beneficial Microbes for Health and Agricultural Industries in Malaysia'........................................................................360

When Gene Therapy Meets Cell Therapy: Applications In Bone Tissue Engineering ........................................................................................................361

Bioplastic: Current Trends and Future Prospects in Thailand .................................................................................................................................362

Renewable Bioenergy Development in Singapore and Recent Discoveries On Biofuel Generation ........................................................................363

Advances In Aerobic Granule Formation and Granule Stability ..........................................................................................................................364

Experimental and Computational Comparison of the Surface Hydrophobicity of Viruses and Model Proteins .................................................................365

Ligand Modulated Conformational Landscape of G-Protein Coupled Receptors ...........................................................................................................366

Sequence Specific Recognition of Cancer Drug-DNA Adducts by HMGB1a Repair Protein .................................................................................................367

Exploring the Functional Conformational Transitions in Proteins Using Atomistic Simulations and Elastic Network Models ........................................................................368

Recovery of Chromosome Structural Ensembles From Contact Probabilities .........................................................................................................369

Identification of Novel Intein Inhibitors with Relevance to Tuberculosis ........................................................................................................................370

Predicting and Evaluating Protein Binding Motifs in the Chlorosomes of Green Sulfur Bacteria .........................................................................................371

Design and Characterization of Micro-Porous Hyaluronic Acid Hydrogels for Non-Viral DNA Delivery ........................................................................372

Airway Gene Transfer and Intracellular Trafficking of Highly Compacted DNA Nanoparticles .........................................................................................373

Telecommunications Model of Lipoplex-Mediated Gene Delivery ..........................................................................................................................374

Microna-29b Delivery Via EpCAM Targeted Cationic Lipoplexes in Lung Cancer Treatment .................................................................................................375

Cellular Trafficking of Dextran Functionalized Silica Nanoparticles for Effective siRNA Delivery .........................................................................................376

Co-Delivery of cDNA and siRNA Using Viral/Nonviral Chimeric Nanoparticles for Synergistic Cancer Gene Therapy ........................................................................377

Development of an Adenovirus Gene Therapy Vector with Improved Transduction Efficacy and Reduced Innate and Adaptive Immune Response ..........................................................................................................................378

Evaluation of Process Capability and Robustness for a Lyophilized Product .............................................................................................................379
Understanding Thermodynamics of Aqueous Film Coating Process Using Data Logger ................................................................. 380
Paola Carbone, Selina Nawaz

Process Robustness Aided by Retrospective Multivariate Data Analysis of Factory Data - A Case Study .................................................. 381
Nirode Chakravorty, Ara S. Subramaniam, P. Pandey, S. Gour, D. Bindra, S. Banerjee

Application of Weber Number-Based Regime Map for Scaling and Control of Pharmaceutical Coating Sprays .............................. 383
Sip C. Liew, Ariel Muljadi, Paul Sojka

Characterizing Heterogeneity of Environmental Conditions in Various Bioreactor Scales Used for Cell Cultivation .......................... 384
Miroslav Sego, Benjamin Neustoecklin, Maximo Morbidelli

All-Protein Vehicles for siRNA Delivery ................................................................................................................................. 385
Ari Pritchard-Bell, Gilles Clermont, Babatunde A. Ogunnaike, Robert S. Parker

Quantitative Assessment of In Vivo HIV Protease Activity Using Genetically Engineered QB-Detached FRET Probes .................. 386
Anu Raghunathan, Sookil Shin, Simon Daefler

Construction of Neurexin Biosensor and Screening of Potential Ligands ..................................................................................... 387
Arun Balasubramanian, Arati Somasundaram, Vibhuti Rastogi

Engineered Multi-Input Protein Switches As Versatile Biosensors with Target-Specific Controls ...................................................... 388
Anu Raghunathan, Sookil Shin, Simon Daefler

Endogenous Molecular Biosensors From Engineered Regulatory Proteins AraC and TetR .............................................................. 389
Christopher S. Frei, Joseph A. Greedell, Shuang-Yan Tang, Patrick C. Cirino

De Novo Protein Design of Multimeric Proteins with Flexible Templates for Application to Designing Aggregating Peptides .......... 390
David J. Klinke, Ryan Muthard, Scott L. Diamond

Engineering the Beta Roll Domain for Use in Stimulus Responsive Systems .............................................................................. 392
Christopher R. Christie, Luke E. K. Achenie, Thomas Colace

Design and Prediction of Peptides That Control Biomineralization .............................................................................................. 393
Readers Barretto, Jingjing Li, David W. Wood

Elongation Kinetics of Fibrillar Polyglutamine Aggregates ........................................................................................................ 394
Ari Pritchard-Bell, Gilles Clermont, Babatunde A. Ogunnaike, Robert S. Parker

Antioxidative Oligomeric Procyanoanidins Prevent Insulin Fibrillation Via the Formation of Unstructured, off-Pathway Aggregates ........................................................................................................ 395
Simpson Gregoire, Joseph Costanzo, Inchan Kwon

Design and Control of Protein-Protein Interactions to Enhance Stability and Solubility ............................................................... 397
Robert S. Parker, Jessica H. Haddad, Joseph Costanzo

Prediction and Accelerated Test of Antibody Aggregation ........................................................................................................ 398
Jonathan Rubin, Lars Linden, Wayne M. Coco, Andreas S. Bommarius, Sven H. Behrens

A Non-Invasive, Quantitative Method to Monitor Misfolding/Aggregation of Protein in Mammalian Cells ....................................... 399
Jennifer Chong, Arati Somasundaram, Vibhuti Rastogi

Design of Antibodies Specific for Unfolded Proteins ..................................................................................................................... 400
Anu Raghunathan, Sookil Shin, Simon Daefler

Interaction of Tau Protein with Model Lipid Membranes Induces Tau Structural Compaction .......................................................... 401
Jeevan Baretto, Jingjing Li, David W. Wood

Studies of IRE1 Alpha Transmembrane Domain Dimerization in Lipid Bilayers ......................................................................... 402
Simpson Gregoire, Joseph Costanzo, Inchan Kwon

Modeling the Diffusive Behavior of 3D Stem Cell Migration ....................................................................................................... 403
Srinivas R. Padmanabhan, Justin S. Green, Tyler Hays, Dayong Chen

Regulatory Role of D'D3 Domain in VWF-A1 Mediated Platelet Thrombus Formation: Application towards Understanding Von Willebrand Disease ............................................................................... 404
Aruna Balasubramanian, Arati Somasundaram, Vibhuti Rastogi, Shelly R. Peyton

Thrombus Growth and Embolism On Tissue Factor-Bearing Collagen Surfaces With Flow Rate of Thrombin with and without Fibrin ........................................................................................................... 406
Kurt Maheshkumar Yenke, Urmiya Dhewaker, Vibha Bhakeeran

A Control Engineering Perspective to Modeling Calcium Regulation and Related Pathologies ....................................................... 408
Amar K. Leamy, James D. Young

A Quantitative Systems Approach to Identify Paracrine Mechanisms That Locally Suppress Immune Response in Melanoma ..................................................................................................................... 410
David J. Klinke

A Multiscale Model of Acute Insulin Resistance in Critical Illness ................................................................................................. 411
Anu Raghunathan, Shoaib J. Khan, Joseph Costanzo

Systems Biology of Host-Pathogen Interactions .......................................................................................................................... 413
Amar K. Leamy, Shafiq L. Khan, Joseph Costanzo

Modulating Lipid Fate Controls Lipotoxicity in Palmate-Treated Hepatic Cells .............................................................................. 414
Jeevan Baretto, Jingjing Li, David W. Wood

Analytical Model of Local Distribution of Chemicals in Tissues with First Order Rate Metabolism Kinetics ....................................... 415
Amar K. Leamy, James D. Young

Modeling the Superovulation Stage in in-Vitro Fertilization (IVF) ............................................................................................. 421
Ari Pritchard-Bell, Gilles Clermont, Babatunde A. Ogunnaike

Interactions of PEO-PPO-PEO Block Copolymers with Lipid Membranes: A Computational and Experimental Study Linking Membrane Lysis with Polymer Structure ........................................................................... 426
Paola Carbone, Selina Nawaz
Computational Study of Drug Transport in Realistic Models of Solid Tumor ......................................................... 427
Wenbo Zhan, Wladyslaw Gedyre, Xiao Yan Xu

Unraveling the Mechanism of a DNA Nanotechnology: The 10-23 Duazyme ................................................................. 429
Margaret C. Linak, Kevin D. Dorfman

Individualized Physiologically Based Modeling and Model Predictive Control of Volatile Anesthesia .................. 430
Alexandra Krieger, Nicki Panoskaltsis, Athanasios Mantalaris, Michael C. Georgiadis, Efstratios N. Pistikopoulos

Computational Model for Nanocarrier Adhesion to Cell Surfaces Validated Using In Vivo, In Vitro, and Atomic Force Microscopy Experiments .............................................................................................................. 431
Jia Liu, Portimovo S. Ayyaswamy, David M. Eichmann, Vladimír Mázykantov, Ravi Radhakrishnan

An Automated Tissue Digester for Pancreatic Islet Production .................................................................................. 432
Zhongliang Lu, Paul W. Todd, Thomas R. Hanley

An Integrated Computational Model of Powder Release, Dispersion, and Deposition in a Dry Powder Inhaler ........ 440
Jovana Milenkovic, Alek Alexyopoulos, Costas Kiparissides

Magnetic Separation of Algal for Biofuel Production .................................................................................................... 441
Jeffery J. Chalmers, Wei Xie, Jie Xu, Maciej Zhorowski, Brad Postier

A Novel Taylor-Couette Photobioreactor for Energy Efficient Micro Algae Cultivation .......................................... 442
Bo Kong, R. Dennis Vigil

Effect of Growing Conditions On Algal Carbohydrate to Butanol Production ............................................................ 443
Alice C. Jernigan, Christa N. Hestekin

Photoautotrophic Growth and Lipid Production Kinetics of the Microalgae Scenedesmus Dimorphus ............... 444
Joanne Belovich, Jacob Schwenk, Christopher Hardulak, John Van Blargan

Use of Sodium Bicarbonate for Efficient Carbon and Water Management for Photoautotrophic Microalgae Cultivation in Open Pond System .............................................................................. 445
Jin Liu, Portimovo S. Ayyaswamy, David M. Eichmann, Wei Liao

Transgenic Expression of a Bacterial Exo-Acting Intracellular α-Amylase in the Chlamydomonas Reinhardtii ..... 446
Xiaoqing Wang, Barbara Sears, Tan(Susie) Liu, Wei Liao

Engineering of Microfluidic Systems for Rapid Detection of Food Pathogens .......................................................... 447
Michael R. Ladisch, Eduardo Ximenes, Arlen Bement

Hitchhiking of Nanoparticles On Red Blood Cells for Targeted Delivery to Lungs .................................................. 448
Jinsoo Kim, Joo-Youp Lee, Ting Lu

Engineering Natural Product Biosynthesis and Biocatalysis .................................................................................... 449
Yi Tang

Engineering Ovarian Follicle Maturation ..................................................................................................................... 450
Lonnie Shea

Building the Biotechnology Toolbox: At the Intersection of Biofabrication and Synthetic Biology ...................... 451
William E. Bentley

System Identification and Frequency Response Techniques for the Design of Controlled Release Drug Delivery Systems ............................................................................................................................................. 452
Timothy Knob, Sam N. Rothstein, Steven R. Little, Robert S. Parker

Quantification of Intracellular Distribution of Agents by pH-Responsive Blend Polymer Particles .......................... 454
Xi Zhan, Kenny K. Tran, Hong Shen

Pulsed Release Through Layered Polymers .................................................................................................................. 455
Swapnil Gandhi, Eric Nuxoll

The Impact of Polymer Blends and Solid Dispersion Technologies On Drug Release Rates .................................. 456
Adeyinka Adegoke, David Worthington

A Predictive Model for Coupled Polymer Degradation, Erosion, and Drug Release in PLGA Biodegradable Stent Coatings ................................................................................................................................. 457
Xiaoxiang Zhu, Richard D. Braatz

Impingement of Printed Droplets Into Porous Medium: Rapid Manufacturing of Personalized Oral Dosages ............. 458
Marilyna Brown, Paul Takhovskov

Rapid Vaccination Via Acetalated Dextran Microparticulate Subunit Vaccine for Protection Against Bacillus Anthracis Challenge ........................................................................................................................................... 459
Kevin Schuly, John Pesce, Sadhana Sharma, Margaret Elberson, Kevin Peine, Eric M. Borcheler, Andrea Keane-Myers, Kristy M. Ainslie

Transdermal Delivery of Biopharmaceuticals Using Dissolving Microneedles Patch .............................................. 460
Jeong Woo Lee, Seong-O Choi, Eric Felner, Mark R. Prausnitz

Coupling of Crystallizers for Efficient Enantioseparation - Comparison of Two Different Process Strategies ........ 463
Chenchu Vang, True. Yu, Lucio Rosnano

PBE-Aided Design of Slurry Milling Process to Reduce Particle Size of Intermediate and Active Pharmaceutical Ingredients ........................................................................................................................................ 465

Discovery and Functional Determinations of Biomass-Degrading Enzymes by Robotic Cell-Free Translation ........................................................................1071
Brian G. Fox, Taichi T. Tukauska, Lai Bergeman, Johnnie A. Walker, Kai Deng, Trent Northen

Characterization of the Interactions of Cellulose, Hemicellulose, and Lignin During Pretreatment Through the Use of Flowthrough Pretreatment ........................................................................1072

Integration of Acid-Enzyme Hydrolysis of Lignocellulosic Biomass to Fermentable Sugars ......................................................................................1073
Saping Zhang, Yan Li, Baoshen Zhang, Yongjie Yan
Hybrid Thermochemical Processing: Fermentation of Pyrolytic Substrates ................................................................................................. 1080
Tao Jin, Ji Gong, Chen Chen, Gang Ruan, Maryam Lustberg, Jeffrey J. Chalmers, R. Sooryakumar, Jessica O. Winter

Enzymatic Recovery of Polyhydroxybutyrate (PHB) From Bacteroides Cepacia by Pancreatin ................................................................. 1082
Yuanzhen Wang, Shijie Liu

Screening Wood-Decay Fungi for Demethylation of Kraft Lignin Using Two Novel Assays with Applications in Producing Bio-Methanol and Formaldehyde-Based Polymers ...................................................................................................................... 1083
Andrew Gibson, Balaji Venkatesagowda, Anelit M. Barbosa, Brian Ross, Lada Malek, Robert F. H. Dekker

Biological and Enzymatic Demethylation of Kraft Lignin and Lignin-Like Model Compounds by Boreal Forest Fungi Using a Novel Technique: Selected Ion Flow Tube-Mass Spectrometry (SIFT-MS) .................................................................................................................... 1084
Balaji Venkatesagowda, Andrew Gibson, Anelit M. Barbosa, Brian Ross, Lada Malek, Robert F. H. Dekker

Tethered Immunolipoplex Nanoparticle (tILN) Device for Detection of Circulating Tumor Cells (CTCs) for Lung Cancer Diagnosis ................................................................. 1085
Ji Jang, Kwang-Joon Kwak, Yun Wu, Xinmei Wang, Yicheng Mao, L. James Lee

Imaging Primo Vascular System, a Newly Found Vascular System ............................................................................................................ 1086
Kyoung A. Kang, Kwang-Sup Soh

Stabilized Proteolipidoplex Microenvironments for the Functional Analysis and Drug Screening of the Cancer and Alzheimer’s Disease Drug Target Gamma-Secretase ............................................................................................................................ 1087
M. Lane Gilchrist, Lina Zhong, Ji Yuen Hur, Jesse Martin, Kwangwook Ahn, Yueming Li

Imaging Echogenic Microparticles in the Gastrointestinal Tract: Demonstration of a New Class of Ultrasound Contrast Agents for Noninvasive Diagnosis of Eosinophil Esophagitis ..................................................................................................................... 1088
Halideh Saffarzadeh Peterson, Gerald Gleich, Leonard F. Pease III

Dendrimer Based Nanoprobes for Super-Resolution Fluorescence Microscopy (STORM) ........................................................................ 1089
Younghoo Kim, Sung Hoon Kim, John A. Katzenellenbogen, Charles M. Schroeder

Pinpointed Diagnosis of Early Stage Oral Cancer by Optical Coherence Tomography Using Stimuli-Disassembling Gold Nanoclusters .................................................................... 1090
Chang Soo Kim, Petra Wilder-Smith, Zhongping Chen, Young Jik Kwon

Fluorogenic Peptide Linked to Anti-CD41 Detects Platelet-Localized Thrombin Activity within Blood Clots

John Welch, Thomas Collea, Ryan Muthard, Timothy J. Stalker, Lawrence F. Bruss, Scott L. Dumond

Fluorinated Nanoparticle Immunolabels for Imaging Specific Membrane Proteins in Parallel with Cell Membrane

Lipsid Using High-Resolution Secondary Ion Mass Spectrometry ........................................................................................................... 1092
Mary L. Kraft, Robert L. Wilson, Jessica F. Friz, Kevin J. Carpenter, Peter K. Weber

Preparation of Sensitive Immuno-Sorbert and Immuno-Sensors by Solid-Phase Refolding of PS-Tag-Fused ScFvs ............................................. 1093
Yoichi Kamada

High-Throughput, Multiplexed Detection of miRNA Analogs Using Micellar Electrokinetic Chromatography ................................................. 1094
Johnathan M. Goldman, James W. Schneider

Nanoparticle-Based, PCR-Less Detection and Isolation of Molecular Biomarkers .......................................................................................... 1095
Kalepesh D. Mahajan, Greg Vieira, Gang Ruan, Maryam Lustberg, Jeffrey J. Chalmers, R. Sooryakumar, Jessica O. Winter

Application of a Novel Tablet PCR Platform for Detection of Influenza Subtypes From Clinical Samples .................................................. 1096
Stephanie Argione, Zinzis Inde, Christina Beck, Steve M. Opal, Andrew W. Artenstein, Anubhav Tripathi

Microfluidic Platform for Antibiotic Susceptibility Screening .................................................................................................................. 1097
Ritika Mohan, Arvind Mehta, Jacquelene Lee, Emre Sevcen, Charles M. Schroeder, Paul J. A. Kenis

Identifying the Differentiation Stages of Individual Hematopoietic Cells by Multivariate Analysis of Secondary Ion Mass Spectra .................. 1098
Mary L. Kraft, Jessica F. Friz, Ji Sun Choi, Robert L. Wilson, Brendan A. C. Harley

Detailed Cellular Phenotype Measurements Using Peptide-Guided Surface Enhanced Raman Scattering (pg-SERS) ........................................ 1099
Ryan S. Senger

Electronic Platform Used As a Proxy to Quantify Cellular Toxicity of Anticancer Drug .............................................................................. 1100
Bee K. Eldred

Ligation-Independent Cloning with Self-Cleaving Intein As a Tool for High-Throughput Protein Purification .................................................. 1101
Tiana D. Warren, Benjamin L. Coolsbaugh, David W. Wood

Combination of Spectroscopic Methods for Inline Monitoring and Control of Mammalian Cell Cultivations ..................................................... 1102
Stefan Baziliot, Roman Greppmair, Rainer Mueller, Pedro Felizardo, Joanna Mendes, Jose Menezes

A Framework for Using a Well Characterized Performance Variability In a Virus Filtration Process towards a Highly Consistent, Economical Unit Operation .................................................................................................................. 1110
Willem Koolen

Michael Felo, Nirupen Singh, Neil Soice

Role of Intermolecular Interactions On Ultrafiltration of Pegylated Proteins ................................................................................................. 1112
Kritsada Rungamkramr, Andrew L. Zydney

Challenges of UF Optimization for High Concentration Therapeutic Proteins ........................................................................................... 1113
Willem Koolen, Pranati Peddi, Edward Galloway, Thomas Linden

Molecular Simulation Studies of Quantitative Correlation Between the Stability of Drug Nanocrystals Suspension and Certain Properties of Both the Drug API and the Stabilizer .............................................................. 1114
Wusheng Zhu, Frank Romanski, M. Silvina Tomassone
The Properties of Various Coating Polymers and Their Effects On Surface Frictional Behavior As Coatings On Pharmaceutical Tablets .............................................................. 1115
Paulina Narayan, Karen Balwinski, Debra Helbrook, Madhusudhan Kodam, Meaghan Blake, Karl Jacob
Surface Modification of Pollen Shape Carriers for Improved Dry Powder Inhalation Efficiency ............................................................ 1116
Hung Loong Giam, Thi Quy Nh Ngoc Nguyen, Raymond Lau
Encapsulation of Laccase in Chitosan Micro-Carriers by Two-Fluid and Three-Fluid Nozzle ............................................................. 1117
Ondrej Kaspar, Frantisek Stepanek
Engineered Biodegradable Janus Particles for Drug Delivery ................................................................................................................ 1124
Janetful Winkler, Franck Romanczuk, Maria S. Tomassone
Carissa M. Young, Theresa Yuraszeck, David Rufen, Jeffrey Caplan, Francis J. Doyle III, Kirk J. Czymmek, Anne S. Robinson
Inter-Kingdom Signaling and Chemotaxis of E. Coli towards the Human Hormone Norepinephrine .................................................. 1127
Sasik P. Pasupuleti, Arul Jayaraman, Mathew Sears, Michael D. Manson
Constructing a Synthetic Gene Network to Model and Understand Signaling Interactions .......................................................... 1128
Ashley Jermay, Gregory T. Reeves
A Polyvalent Cell Engineering Strategy to Enhance Intracellular Clearance ........................................................................ 1129
Rohan Padmashali, Hui You, Stelios T. Andreidis
Effect of Microtubule Motors On Microtubule Mechanics in Living Cells .................................................................................... 1131
Nandini Shukhar, Jun Wu, Anthony J. C. Ladd, Richard Dickinson, Tanmay Lele
A Mechanism for Adaptive Remodeling in the Bacterial Flagellar Motor ...................................................................................... 1133
Pushkar Lele, Howard C. Berg
Mathematical Modeling of Intracellular Transport in the Squid Giant Axon ............................................................................. 1134
Jennifer Anne Pascall, Michael Losevayberg, Arnaud Chauviere, Pamela Seamer, Elaine Bearer, Vittorio Cristini
Cyclic Strain Versus Endothelial Cell Presence On MSC Osteogenesis .................................................................................. 1135
Marisah S. Hahn
Co-Electrospray Scaffolds with Gradients in Fiber Alignment and Chemistry for Regeneration of the Ligament-Bone Interface ........................................................................ 1136
Sathiyaravu Samavedi, Pradvi Gaddam, Abby Whittington, Aaron Goldstein
Engineered Arterial Mimics (EAMs) to Quantify Smooth Muscle Cell Contribution to Atherosclerosis ........................................ 1138
William Herrick, Shelly B. Peyton
Development of Biomimetic Environments with Appropriate Chemical and Mechanical Cues for Cells in Bioengineered Vascular Grafts ........................................................................ 1139
Mao-Shih Liang, Maxwell T. Koobatar, Daniel D Swartz, Stelios T. Andreidis
Sustained Release Systems to Locally Expand Regulatory T Cell Populations and Suppress Inflammation .................................................. 1140
Stephen C. Balmert, Siddharth Jhanjhiwala, Giorgio Raimondi, John R. Yu, Louis D. Falo, Angus W Thomson, Steven R. Little
Wnt5a Conjugated Poly(ethylene glycol) - Gelatin Composite for Vascularized Tissue Engineering .................................................. 1142
Asgani Patel, Akhilesh K. Galang, Brian, Pinar Zorbat, Elif Karaca, Iris Schunk, Ali Khademhosseini
Modeling Stress-Induced Hormone Effects On Glucose-Insulin Dynamics in Critically Ill Patients .................................................. 1143
Thang Ho, Gilles Clermont, Balaji Yegneswaran, Robert S. Parker
Bayesian Inference Based Aggregated Gaussian Process Models for Identification of Ovarian Cancer Subtypes and Prediction of Survival Rates of Cancer Therapies .................................................. 1145
Mudassir Rashid, Jie Yu
A NEW Framework for Online Optimization of Recombinant Protein Production in FED-Batch Fermentation Processes ........................................................................ 1146
Zheng Li, M. Nazmul Karim
Design of a Modular Safety System for the Artificial Pancreas: The Health Monitoring System (HMS) .................................................. 1147
Rebecca A. Harvey, Kyal Dassau, Howard Zisser, Dale E. Seborg, Lois Jovanovic, Francis J. Doyle III
Optimal Control for Predicting Drug Dosage in Superovulation Stage of in Vitro Fertilization .......................................................... 1154
Kirti Maheshkumar Tenkis, Urmi D. Dinekar, Vibha Bhalerao
Dynamic Treatment Strategies for Methanol Intoxication Using Ethanol As Alcohol Dehydrogenase Inhibitor in Human Beings .................................................................................. 1155
Ruben D. Vargas, Angel A. Galvis, Jonathan Moreno, Jorge M. Gomez, Watson L. Vargas
Revisiting the Foundations of Cybernetic Modeling Using Systems Engineering Methods .......................................................... 1157
Aravinda Mandli, Jayant Modak
Bioremediation of Oil Spill From Oil Exploration Site Using Microbial Consortia ........................................................................ 1158
Bina Singh Sr., Priyangshu M. Sarma Sr., Ajay K. Mandal, Banswari Lal
Transcriptomic Analysis Reveals Global Regulation of Lignocellulolytic Enzymes within Anaerobic Fungi ........................................ 1159
Michelle A. O’Malley, Diego Borges-Rivera, Dayan A. Thompson, Michael K. Theodorou, Chris A. Kaiser, Avis Regees
Application of Biofilter System for Removal of Ethyl Acetate: Column and Kinetic Studies ............................................................. 1160
Smita Raghuvarshni, Suresh Gupta, B. V. Bahu
A Novel up-Flow Inner-Cycle Anoxic Bioreactor (UIAB) System for the Treatment of Sulfide Wastewater and Purification of Biogas ........................................................................ 1188
Jianmin Xing, Ziyu Song
Biotreatment of Metals From Spent Refinery Catalysts Using Acidithiobacillus Thiooxidans and Chelating Agent ................................ 1189
Ashok Lal Jr., Bina Singh Sr., Priyangshu M. Sarma Sr., Banswari Lal Sr.
Biodegradation of Carbon Tetrachloride in Laboratory Flow Channels .................................................................................. 1190
Sathishkumar Santharam, Larry Davis, Larry Erickson
Microbial Mechanism On Upflow Microaerobic Sludge Blanket Reactor for Municipal Wastewater Treatment
