Accelerating Fossil Energy Technology Development Through Integrated Computation and Experimentation

Topical Conference at the 2012 AIChE Annual Meeting

Pittsburgh, Pennsylvania, USA
28 October - 2 November 2012

# TABLE OF CONTENTS

Practical Membranes for CO₂ Capture ............................................................. 1
   Christina Myers, David Luembke, Wei Shi, Shan Wickramanayake, Brian Kail, Robert L. Thompson, Hunaid Nulwala

Theoretical and Experimental Approach to Nitrogen Selective Membranes .................................................. 2
   Ekin Ozdogan, Panithita Rochana, Jennifer Wilcox

Poly(ionic liquid) Membranes for CO₂/N₂ Separation: Insight From Atomistic Simulation ........................... 4
   Weijie Fang, Zhonglin Luo, Jianwen Jiang

Multifold CO₂ Transport Property Enhancement of Interfacially Constrained Nanocomposite Membranes ... 5
   Lakshmi Suhasini Kocherlakota, Tiep Hoang Pham, René M. Overney

Nanocomposite Membrane of a Polymer of Intrinsic Microporosity and Zeolitic Imidazolate ...................... 6

Frameworks for Gas Separation ........................................................................ 8
   Qi Ge Song, Shaheen A. Al-Mahtaseb, Easun Swamid

Steam Stability of Layered Zeolites Suitable for Hydrogen Transport ....................................................... 8
   Bahman Elyassi, Xueyi Zhang, Michael Tsapatsis

Physical Aging and Carbon Dioxide Plasticization of Thin Polyetherimide Films ....................................... 9
   Jianzhong Xia, Tai Shung Chung, Wei Li, Norman R. Horn, Donald R. Paul

The Design and Modeling of a Controlled Atmosphere Food Storage System Based On Membrane Technology ........................................................................... 10
   Hang Yin, Na Peng, Kok Lin Chong, Glenn Lipscomb, Tai-Shung Chung

Effect of Confinement On Ionic Liquid Properties for Carbon Capture Processes ........................................ 11
   Ruth E. Baltus, Laila Banu

Metallic Based Aqueous Amine Membranes for the Separation of Carbon Dioxide From Fossil Fuel 12

Flue Gas ........................................................................................................... 12
   Brian L. Bischoff, Lawrence E. Powell

A Comprehensive Multi-Step Description of the Permeation of Hydrogen in a Dense Metal Membrane Over a Broad Temperature Range .......................................................... 13
   Nicholas Deveau, Yi Hua Ma, Ravindra Datta

High Temperature Metal Membranes for Hydrogen Permeation without Platinum Group Metals ............. 14
   J. Douglas Way, Colin A. Wolden, Keinde Adeyemo, Mayur Ostwal

Long Term H₂ Permeance and Selectivity Stability of Pd and Pd-Au Large Scale Membranes in Actual Syngas Atmospheres ................................................................. 15
   Federico Guazzzone, Jacopo Catalano, Ivan Mardilovich, Nikolaus Kazantzis, Yi Hua Ma

Composite Catalytic Membranes: Enhancing H₂ Recovery Membranes by Appropriate Coupling with Water-Gas-Shift Reaction ................................................. 16
   Elva Romero, Daejin Kim, Benjamin Wilhite

Toward a Common Method of Cost Estimation for CO₂ Capture and Storage At Fossil Fuel Power Plants ... 17
   Edward S. Rubin

Proposed Baselines and Standard Methods for Systems Analyses of Power Generation Technologies ....... 18
   Michael Matavezewski

Methodology for Evaluating the Cost of Emerging CCS Technologies ..................................................... 19
   Abhayjit S. Bhown, George Booras, Ronald Schoff

A Common Modeling Framework to Evaluate and Compare the Economics of CCUS Technologies .......... 20
   Edward S. Rubin

NETL CO₂ Injection and Storage Cost Model .................................................................................. 21
   Tim Grant, Dave Morgan, Jason Valenstein, Andrea Poe, Martin Milani, Richard Lawrence

A Monte Carlo Approach for Estimating and Validating Contingencies for CCS ................................. 22
   Paul Wurhach, Mark Woods, John Wimer

CO₂ Mineralisation Through Hydrometallurgical Leaching of Brown Coal Fly Ash ............................... 23
   Lian Zhang, Teck Kwang Choo

Statistical Evaluation of Mineral Carbonation of a Fly Ash/Brine System ............................................. 24
   Grace Murithi, Leslie F. Petrik, Wilson M. Gitari, Frédéric J. Doucet

Ex situ CO₂ Mineralization Using Reactive Species .............................................................................. 25
   Juan Ma, Roe-Hoan Yoon
Base Metal Production From CO₂ Capture and Storage Via the Ics Integrated Mineral Carbonation Process ................................................................. 30

Richard Hanwick

Coupling Industrial Carbon Mineralisation and Ocean Alkalinity Enhancement ................................................................. 31

Phil Renforth, Tim Kruger

Evaluating the Viability of CO₂ Mineralization Via Reaction of Caustic Waste Materials ................................................................. 33

Robert Dilmore, D. Allen, S. W. Hedges, Yee Soong

The NETL Aqueous Process: History and Recent Developments ................................................................. 34

William O’Connor, G. E. Rush, Circe Ferba

Summary Results of Epr i’s Engineering and Economic Case Studies of Post Combustion Capture Retrofit Applied to Various North American Host Sites ................................................................. 35

Des Dillon

Electrochemical Membrane for Carbon Dioxide Separation and Power Generation ................................................................. 37

Stephen Jolly, Hossein Ghezel-Ayagh, Jennifer Hunt, Dilip Patel, William A. Steen, Carl F. Richardson, Olga A. Marina

Modeling, Simulation and Optimization of Absorption, Membrane and Adsorption-Based CO₂ Capture for Variable Feed CO₂ Concentration and Feed Flow ................................................................. 44

M. M. Faruque Hasan, Richard C. Balibin, Josephine A. Elia, Christodoulos A. Floudas

Pressure Swing Adsorption: Design and Optimization for Pre-Combustion Carbon Capture ................................................................. 45

Alexander W. Dowling, Lorenz T. Biegler, David C. Miller

Assessment and Analysis of Post-Combustion Carbon Capture with Membrane Separation ................................................................. 46

Niall Mac Dowell, Nilay Shah

Dynamic Modelling and Analysis of Post-Combustion CO₂ Capture Processes ................................................................. 49

Anita S. Lee, John R. Kitchin

Comparisons of Solvents for Post-Combustion CO₂ Capture Using a Multi-Objective Analysis ................................................................. 50

Post-Combustion Gas Permeation Carbon Capture System Models ................................................................. 51

Juan E. Morinelly, David C. Miller

Fuel Processing: Renaissance of the Second Decade (Keynote) ................................................................. 52

Brett A. Peppely, Rajesh D. Parmar, Kanal Karan

Desulfurization of JP-8 Fuel Using Ag-Loaded Silica Supports Under Ambient Conditions ................................................................. 55

Dat T. Tran, Jessica St. John, Deryn Chu, Scott R. J. Oliver

Desulfurization of Commercial Fuels Using Mixed Oxide Supported Silver Adsorbents At Room Temperature for Fuel Cell Applications ................................................................. 56

A. H. M. Shahadat Hussain, Hongyou Yang, Bruce J. Tatarchuk

Multi-Physics Modeling of Auto-Thermal Diesel Surrogate Reforming ................................................................. 57

Rajesh D. Parmar, Ankit Jalan, Dushyant Shekhawat, William H. Green Jr., Brett A. Peppely, Kanal Karan

Heat-Integrated Steam Reformer for Hydrogen Production ................................................................. 58

Saurabh A. Vilekar, Christian Junaedi, Kyle Hawley, Dennis Walsh, Subir Roychoudhury

Diesel Reforming Over Pyrochlore-Based Monolith ................................................................. 59

Daniel J. Haynes, David Berry, Dushyant Shekhawat, Mark W. Smith, Matthew M. Seabaugh, Richard Long, James J. Spivey

Carbon Deposition Over Supported Rh-Ni Catalysts in Steam Reforming of Liquid Hydrocarbon Fuel for H₂ Production: Influence of Support, Temperature, and Sulfur ................................................................. 60

Chao Xie, Yongsheng Chen, Chunsan Song

Fuel Processing with Diesel Fuel and Kerosene for APU Applications ................................................................. 61

Joachim Pavel, Jan Meijbner, Remzi Can Samsun, Ralf Peters, Detlef Stolten

Reactor Design for Diesel Reforming Using a Graded-Composition Monolith ................................................................. 68

Mark W. Smith, David A. Berry, Dushyant Shekhawat, Daniel J. Haynes, James J. Spivey, John Zondlo

Carbon Molecular Sieve Membranes for N₂/CH₄ Separation ................................................................. 69

Xue Ning, William J. Koros

High Performance Carbon Molecular Sieves (CMS) Hollow Fiber Membranes for Natural Gas Separation ................................................................. 70

Nitesh Bhawana, William J. Koros

Evaluation of Facilitated Transport Membrane for Olefin/Paraffin Separation ................................................................. 71

Majid Keyvani, Glenn Towe, Ali Hamza

Gas Transport of Paraffins and Olefins in Liquid Crystal Membranes ................................................................. 86

Feras Rabie, Stephen M. Martin
Synthesis and Characterization of ZIF-8 Membrane with Exceptionally High Propylene / Propane Separation Performance................................................................. 87
   Hyuk Taek Kwon, Sagar Lonkar, Hae-Kwon Jeong
Design of ZIF/Polyimide Mixed Matrix Membrane for Olefin/Paraffin Separations ................................................................. 89
   Chen Zhang, William J. Koros
TR Polymers for Olefin/Paraffin Separation................................................................. 90
   Zachary P. Smith, David F. Sanders, Ruilan Guo, Benny Freeman, Donald R. Paul, James E. McGrath
Asymmetric Hollow Fiber Membranes for Aggressive Sour Gas Purification................................................................. 91
   Brian E. Kraftsich, William J. Koros
Carbonate Ceramics and Concrete: A Disruptive Technology for CO₂ Utilization and the Construction Business ................................................................. 92
Synthesis of CaSiO₃ for Use As a Cementitious Material for Carbonate Concrete ................................................................. 93
   Nick Decristofaro, V. Atakan, C. Vakifahmetoglu, L. McCandlish, J. Krishnan, L. Tang, Q. Li, R. E. Riman
CO₂ Utilization in Concrete Block Production ................................................................. 94
   Yixin Shao, Liang Hu, Hilaël El-Hassan
Catalyzed Activation of CO₂ by Lewis Base Site in Hybrid Metal Organic Frameworks ................................................................. 97
   Liang Chen
Utilization Technologies for CO₂ Derived From North Dakota Lignite ................................................................. 98
   Jason D. Laumb, Melanie D. Jensen, Robert M. Cowan, Alexander Azenkeng, Loreal V. Heehink, Laura J. Raymond, Peter A. Letvin
Harnessing Applied Potential for Sunlight Driven CO₂ Utilization ................................................................. 108
   Benjamin R. Buckley
Increasing Progress Toward Operational Excellence of Fossil Energy Plants with CO₂ Capture ................................................................. 109
   Stephen E. Zitek, Eric A. Liese, Piyadarshi Mahapatra, Richard Turton, Debangsu Bhattacharyya
Characterization and CO₂ Sorption Properties of Materials for CCS Applications ................................................................. 164
   Jiajun He, Erik C. Rupp, Jennifer Wilcox
Reducing Uncertainties in Model Predictions Via History Matching of CO₂ Plume Migration At the Sleipner Project, Norwegian North Sea ................................................................. 165
   Peng Lu, Chen Zhu, Per Aagard
Gas Hydrates Modeling: Spanning Multiple Scales ................................................................. 166
   Nagaaree Garapati, Srinath Velaga, Brian Anderson
High-Resolution Numerical Simulation of CO₂ Migration in Saline Aquifers ................................................................. 167
   Ruslan Ishkakov, Denis Yoskov, Hamdi Tchelepi
Pore Scale CO₂ Displacement in Sandstone with Comparison to Core Scale Dynamics ................................................................. 168
   Dustin Cran dall, Robert P. Warzinski, William O’Connor, Aslam M. Kabir, Grant Bromhal
Modeling of Pressure and Displacement Signatures for Detecting A Fracture in the Caprock During Geologic Sequestration ................................................................. 169
   Hema Siriwardane, Raj Gondle, Grant Bromhal
Effect of Calcite Dissolution On the Leakage Through Abandoned Wells in Geological CO₂ Storage ................................................................. 172
   Ezededdine Laabidi, Rachida Boubhila
Hydrogen Production From Glycerol Reforming Over Hydrogen Production From Glycerol Reforming Over Ni Based Catalysts ................................................................. 173
   Dong-Ju Moon, Su Hyun Cho, Seung-Hoon Kim, Seung-Hwan Lee, Bang Hee Kim, Sang Woo Kim, Arunabh Datta, Kwan-Young Lee
Computer Simulation of Water and Ammonia Electrolysis ................................................................. 175
   Ali Estejab, Damilola A. Daramola, Gerardine G. Boite
Desulfurization of JP-8 Fuel Using Metal-Loaded Meso/Macroporous Aluminosilicates ................................................................. 177
   Jessica St. John, Dat T. Tran, Deryn Chu, Scott R. J. Oliver
A Novel KMgAl Sorbent for CO₂ Capture in a Fluidized Bed ................................................................. 178
   Fukai Xiao, Wei Wei, Lei Li, Xia Wen, Feng Wang, Ning Zhao
Microscopic Behavior of Chemical Demulsifiers At the Water-in-Brazilian Asphaltene Model Oil Emulsions: Langmuir Monolayers and Their Corresponding Langmuir-Blodgett Films ................................................................. 182
   Juliana S. A. Carneiro, Montserrat Fortuny, Alexandre F. Santos, Claudio Dariva, Eliot Franceschi, Bianca M. S. Ferreira, Sandro R. Da Rocha
New Reservoir Opportunities for CCUS: The Bio-Geochemistry of Mobile Water Intervals with Residual Oil: A Permian Basin Case History ................................................................. 183
   David Vance, Steve Melzer, Robert Trentham
Evolution of Carbonate Dissolution Features Produced Under Variable pCO₂ Conditions Relevant to CO₂-EOR and Geologic CO₂ Storage ................................................................. 185
   Susan Carroll, Megan Smith, Yue Hao
Opportunities for Utilizing Anthropogenic CO₂ for Enhanced Oil Recovery (EOR) .......................................................... 186
Michael L. Godec

Potential for CO₂ Enhanced Oil Recovery in the Appalachian Basin .......................................................... 187
Timothy Carr

Carbon Dioxide Pipeline Infrastructure Dependence On Reservoir Risk .......................................................... 188
Jeffrey Buelicki, Richard Middleton, Melissa Pollik, Elizabeth Wilson, Jeffrey Fitts, Catherine Peters

A Phased Approach to Developing A Pipeline Network for CO₂ Transport During CCUS .......................................................... 190
Melanie D. Jensen, Peng Fei, Anthony C. Snyder, Loreal V. Heebink

Micro-Channel Fuel Processors As Hydrogen Source for Fuel Cells in Distributed Energy Supply Systems (Keynote) .......................................................................................................................... 196
Gunther Kotb, S. Keller, M. O’Connell, Jochen Schuerer, David Tiemann, Martin Wichert

Tri-Generation of Hydrogen, Heat and Power From a High Temperature Fuel Cell .......................................................... 198
Jack Brouwer, Roxana Bekemohammedi, Pere Margalef

Effect of Storage Time On the Catalytic Activity of Gold for Selective CO Oxidation .......................................................... 201
Fabio B. Passos, Thiago S. Mocer

Hydrogen and Methane Rich Syngas From a Catalytic Coal Gasifier with in Situ Capture of H₂S/CO₂ and Ex Situ Regeneration of Catalysts .......................................................... 202
Nicholas Siefert, Dashyant Shekhawat, Shawn Litster, David Berry

Molten Salt Gasification (MSG) of Refinery Wastes to Produce Hydrogen .......................................................... 207
Lyman Frost

Highly Efficient Integrated Chemical Looping Gasification Fuel Cell System .......................................................... 208
Liang Zeng, Mandar Kathe, Siwei Luo, Fanxing Li, Liang-Shih Fan

Experimental Investigation On the Effects of Trace Contaminants in Coal Derived Synagas On Performance of SOFC Ni-YSZ Anode .......................................................... 209
Koji Kuramoto

A Microchannel Water-Gas Shift Reactor Simulation and Optimization for a Mobile Application .......................................................... 219
M. H. Akbari, S. A. Asaee

Microplasma Reforming for Fuel Cell Feed .......................................................... 236
Peter J. Lindner, R. S. Besser

Dry Reforming Assisted Nonthermal Plasma Catalytic Reactor .......................................................... 243
Mahammadunnisa Shaka, P. Manoj Kumar Reddy, B. Ramaraju, Ch. Sarbahmanany

Dry (CO₂) Reforming of Methane Using Rh Substituted Pyrochlores (La₂Zr₂O₇) .......................................................... 244
Devendra Pakhare, Victor Abdelsayed, Daniel J. Haynes, Dashyant Shekhawat, James J. Spivey

Simulation of Methane Steam Reforming Enhanced by in Situ CO₂ Sorption Utilizing K₂CO₃ Promoted Hydrotalcites for H₂ Production .......................................................... 262
Narueuan Chanburanasiri, Ana M. Ribeiro, Alirio E. Rodrigues, Navadul Luostiripojana, Sattichai Assabumrungrat

Bi-Reforming of Methane and Natural Gas Under High Pressure .......................................................... 270
Alain Goepert, Miklos Csarn, Robert May, Surya Prakash, George Olah

Production of Hydrogen and Nanocarbon From Catalytic Decomposition of Methane Over a Ni-Fe/Al₂O₃ Catalyst .......................................................... 272
Yi Jin, Guangwei Wang, Yongdan Li

Natural Gas Direct Carbon Fuel Cell for Hydrogen and Electricity Production (NGDCFC) .......................................................... 273
Meyer Steinberg

CFD Simulation of Pressurized, Staged Oxyfuel Combustion .......................................................... 274
Benjamin M. Kumfer, Fei Xia, Bhupesh Dhungel, Richard L. Axelbaum

Double Perovskite Materials for Applications in Chemical Looping and Oxygen Storage .......................................................... 276
Jonathan W. Leke, Sittichai Natesakhamw, John P. Baltrus, Christopher Matranga

Using Ca₃La₂₋ₓMnₓO₆₋ₓM⁺,O₂₋ₓ As Oxygen Carriers for Chemical-Looping Combustion .......................................................... 277
Tobias Mattisson, Ali Hedayati, Abdul-Majeed Azad, Magnus Ryden, Henrik Leion

Mechanism of Methane Chemical Looping Combustion with Fe₂O₃ Promoted with CeO₂ .......................................................... 285
Duane Miller, Ranjan V. Siritwirdane

Oxygen Carriers for Chemical-Looping Combustion with Solid Fuels .......................................................... 286
Tobias Mattisson, Henrik Leion, Magnus Ryden, Anders Lyngfelt

Development and Performance Evaluation of a Cost-Effective Oxygen Carriers .......................................................... 294
Liangyong Chen, Yi Zhang, Fang Liu, Chunli Han, James K. Neatherly, Kunlei Liu

Study of Wyoming PRB Coal for Application of Solid Fueled Chemical Looping Combustion with TGA-MS .......................................................... 295
Yi Zhang, Jeffrey Slone, Aurora M. Rubel, James K. Neatherly, Fang Liu, Chunli Han, Liangyong Chen, Kunlei Liu

Techno-Economic Evaluation of Chemical Looping Combustion for Industrial-Scale Applications .......................................................... 296
John T. Ramsey, Michael J Gallagher Jr., Stephen Carpenter, George Richards
CFD Modeling of Commercial-Scale Entrained-Flow Coal Gasifiers ................................................................. 297
   Junliang Ma, Stephen E. Zitney

Ultrasound Measurements of Temperature Profile Across Gasifier Refractories ........................................ 298
   Yanhu Jia, Mikhail Sklar

Recent Developments in Carbonaceous Chemistry for Computational Modeling (C3M) with
Uncertainty Quantifications (UQ) .......................................................................................................................... 302
   Kiren Chaudhari, Richard Turton, Chris Guenther, Mehrdad Shahnam, Aytekun Gel, Philip Nicolletti, Tingwen Li,
   Dirk Vanesendelft, Nate Weiland

A One-Dimensional Transient Model of a Single-Stage, Downward-Firing, Entrained-Flow Gasifier ................. 303
   Job Kasule, Richard Turton, Debanshu Bhattacharyya, Stephen E. Zitney

Co-Pyrolysis of Low Rank Coals and Biomass At Transport Gasifier Conditions ........................................... 304
   Nathan T. Weiland, Nicholas C. Means, Chris Guenther

   Pratik Pednekar, Debanshu Bhattacharyya, Richard Turton, Raghu Nathan Rengaswamy

Hydrogen Production From Renewable Sources: R&D Challenges, Targets and Pathways (Keynote) .......... 313
   Sara Dillich, Eric Miller, Erika Sutherland, Sarah Studer

Auto-Thermal Reforming of Biodiesel-Ethanol-Diesel Blends for Solid Oxide Fuel Cell Applications ............ 315
   Jiefeng Lin, Thomas Trahbol, Mark Wallis, Daniel Smith

Development of a Butanol Fuel Processor for Person-Portable Fuel Cell Power Systems ............................. 323
   Stephen Jolly, Hossein Ghezel-Ayagh

Cartridge-Based Ceramic Micoreactor Networks for Process Intensification in Fuels Reforming:
Demonstration and Modeling of Complex 2-D Thermal Integration ............................................................... 324
   Bhana Vardhan Reddy Kancharam, Shalini Damodharan, Benjamin Wilhite

Protonic Membrane Reactors: Converting Hydrocarbon Resources and CO₂ to Fuels .................................. 325
   Eric D. Wachsman

One-Stage Process for Water Gas Shift in a Pd-Based Membrane Reactor .................................................. 326
   Giuseppe Barbieri, Adele Brunetti, Alessio Caravella, Enrico Drioli

Water Gas Shift Reaction in Thin Pd-Layer Supported On PSS Membrane Reactor ...................................... 328
   Angelo Bascle, Piero Pinacci, Francesca Drago, Simona Ligouri, Pietro Paolo Morrone, Adolfo Iulianelli

Techno-Economic Assessment of Membrane Reactor Technologies for Pure Hydrogen Production for
Fuel Cell Vehicle Fleets ....................................................................................................................................... 329
   Leonardo Roses, Giampaolo Manzolino, Stefano Campanari, Elliot De Wit, Michael Walter

Experimental and Simulation Studies of Effects of Operating Conditions and Membrane Properties
On the Performance of Zeolite Membrane Reactors for High Temperature Water Gas Shift Reaction ............ 345
   Sek-Jhin Kim, Shaowei Yang, Junhang Dong

Pore Scale Models for Imbibition of CO₂ Analogue Fluids in Etched Micro-Model Junctions Using
Micro-Fluidic Experiments and Direct Flow Calculations .................................................................................... 346
   Emily Chapman, Jianhui Yang, John Cranshaw, Edo Boek

Selection of Domain Size for Lattice Boltzmann Simulation to Calculate Flow Properties of Porous
Media ........................................................................................................................................................................ 347
   Md Bakibul Sarkar, Shamsun Siddiqui, Dustin McIntyre, Grant Bronhal, Mohamed Soliman

A Lattice Boltzmann Model with Realistic Equations of State for Modeling Pore-Scale Effects On
Capillary Trapping of CO₂ During Geological Carbon Sequestration ......................................................... 348
   Marcel Schapp, Dorothe Wildenschild

Insights From Image-Based Modeling of Fluid Flow in Bulk Proppant Packs and Propped Fractures
Under Varying Confining Stress .......................................................................................................................... 350
   Yijie Shen, Paula Sanematsu, Seth M. Bradley, Clinton S. Willson, Ali Takkiri Borujeni, Karsten E Thompson,
   Mayank Tyagi

Recent Trends of Streamline Simulation Technology Applications in Oil Industry ............................................ 351
   Abdullhal Al-Najem, Shamsun Siddiqui, Mohamed Soliman

Hydrogeochemical Modelling in Coastal Carbonate Aquifer: Porosity and Permeability Evolution ............... 366
   Rachida Boubliha, Ezzeddine Laabidi

Structure Sensitivity of Methanol Synthesis From Carbon Dioxide On Copper-Based Catalysts .................... 377
   Howard, Xingyi Deng, Christopher Matrunga

Fluorine-Modified Cu/Zn/Al/Zr Catalysts Via Hydrotalcite-Like Precursors for the CO₂
Hydrogenation to Methanol .................................................................................................................................. 378
   Fubai Xiao, Peng Gao, Li Feng, Ning Zhao, Wei Wei, Yukun Sun

Dehydrogenation of Ethylbenzene to Styrene with CO₂ Over V₂O₅/Al₂O₃-ZrO₂ Catalyst ................................. 385
   Shijuan Zhang, Xiaohong Li, Jie Feng, Wenying Li, Hongxia Fan, Qian Wang
A Comparative Study of Activated CO₂ Adsorption and Protonation On the γ-Al₂O₃, β-Ga₂O₃, In₂O₃ Surfaces .............................................. 397
Jingyun Ye, Changjun Liu, Qingfeng Ge

C-H Activating Carboxylation of Terminal Alkynes with CO₂ and Its Application in Synthesis ..................................................... 398
Yagen Zhang, Jackie Y. Ying, Dingyi Yu, Situ Rishan

Photochemical Reduction of CO₂ Using Delafossite Oxides .......................................................... 400
Jonathan W. Leake, James P. Lewis, M. Kylee Underwood, Christopher Matranga

Two-Step Solar Thermochemical Cycle for Splitting CO₂ Via Ceria Redox Reactions - Experimental Investigation with a 3.8 Kw Solar Reactor ........................................ 401
Philipp Furler, Jonathan Scheffe, Aldo Steinfield

Applicability of Perovskite-Based Oxides As Redox Materials for Thermochemical CO₂ Dissociation ........................................ 402
Jonathan Scheffe, David Weibel, Aldo Steinfield

Bench-Scale Electrochemical Production of Synthesis Gas .......................................................... 403
Eric Dufek, Tedd Lister, Michael McIlwain

CO₂ - Ionic Liquids Synergies: Reactive Capture and Conversion of CO₂ to Chemicals .................. 413
Valerie Eta, Pasi Virtanen, Ikenna Anugwom, Päivi Mäki-Arvela, Jyri-Pekka Mikkola

Numerical Simulation of Reservoir-Wellbore Fluid Flow Simulations At Geologic CO₂ Sequestration Sites: Coupled or De-Coupled? .................. 415
Rajesh Pawar, Haruko Wainwright, Robert Dilmore, Jens Birkholzer, Jim Houseworth, Grant Bromhal

Investigating the Role of Coupled Thermal-Hydrological-Mechanical (THM) Processes During Geological Sequestration of CO₂ ............ 416
Sharad Kelkar, Rajesh Pawar, George A. Zyvoloski, Philip Stauffer, Hari Viswanathan

Reservoir Model Optimization Using the Seismic Response to CO₂ Injection and Stochastic Inversion ........................................... 417
Abelardo Ramirez, Kathy Dyer, Donald J. White, Yue Hao, James Johnson

Assessing the Role of Thermal Stresses in Caprock Integrity During CO₂ Storage .................. 418
Gennady Gor, Jean-Herve Prevost

Cement Degradation Under Conditions Relevant to Geological Carbon Sequestration .......................................... 419
Leopold Brunet, Li Li, Zuleima Karpyn, Brian Strazisar, Barbara Ketchko

Laboratory and Numerical Simulation Based Investigation of Two-Phase Brine-CO₂ Displacement Processes Using Cores From Three CO₂-Sequestration Candidate Formations ........................................... 426
Shameem Siddiqui, Talal Gamadi, Oman Algadi, Abdulrahman A. Alquraishi, Dustin McIntyre

Modification of Fracture Hydraulic Properties by CO₂-Acidified Brine Flow .................. 437
Hung Deng, Brian R. Ellis, Catherine Peters

New Experimental Data and Physico-Chemical Model for the Solubility of Carbon Dioxide in Aqueous Solutions of Monoethanolamine .................................................. 438
Michael Wagner, Inga Von Harbow, Jaek Kim, Gerd Maurer, Hans Hasse

Mass Transfer Evaluation of CO₂ Absorption in a Wetted Wall Column .................................. 439
Reynolds A. Frimpong, Joseph E. Remias, James K. Neathery, Kunlei Liu

Kinetic Study of Carbon Dioxide Absorption by Aqueous Solutions of N-Methyldiethanolamine and Piperazine .................. 440
Alberto Servia, Nicolas Laloue, Julien Grandjean, Sabine Rodé, Christine Roizard

Aqueous Morpholine As a Potential Post-Combustion CO₂ Absorption Solution .................. 446
Krishna Mohan Jinka, Taylor Kuhn, Joseph E. Remias, James K. Neathery, Kunlei Liu

Novel Liquid-Like Nanoscale Organic Hybrid Materials for CO₂ Capture .................. 447
Camille Petit, Youngjune Park, Kunyi Andrew Lin, Ah-Hyung Alissa Park

Development of Reaxff Force Field for Carbon Dioxide Capture with Ionic Liquids: A Combined First Principles and Classical Simulation ........................................ 448
Bo Zhang, Adri C. T. Van Duin, Karl Johnson

Vibrational Spectroscopy Characterization of CO₂-Ionic Liquid Systems for Pre-Combustion CO₂ .................. 449
Anita S. Lee, John R. Kitchin

Evaluation of Mercury Capture Technology Using Various Sorbents Injection .................. 450
Xiao'ai Wang, Pratim Biswas

Overview on Mercury Control Options for Coal-Burning Power Plants .................. 451
Evan J. Granite, Henry W. Pennline

Palladium Sorbents for High Temperature Capture of Mercury, Arsenic, Selenium and Phosphorus from Fuel Gas .................................................. 452
