2012 IEEE Ninth International Conference on e-Business Engineering

(ICEBE 2012)

Hangzhou, China
9-11 September 2012
Table of Contents

Message from the ICEBE 2012 Chairs..................................................................................................................x
Message from the ICEBE 2012 Program Chairs........................................................................................................xi
Organizing Committee...........................................................................................................................................xiii
Program Committee..................................................................................................................................................xv
Message from the SOAIC 2012 Workshop Co-chairs............................................................................................xix
SOAIC 2012 Workshop Co-chairs and Program Committee..........................................................xx
Message from the EM2I 2012 Workshop Co-chairs...........................................................................................xxi
EM2I 2012 Workshop Co-chairs and Program Committee................................................................................xxii
Message from the SOKMBI 2012 Workshop Co-chairs.....................................................................................xxiii
SOKMBI 2012 Workshop Co-chairs and Program Committee........................................................................xxiv
Message from the ASOC 2012 Workshop Chairs..................................................................................................xxv
ASOC 2012 Workshop Chairs and Program Committee................................................................................xxvi
Keynotes..................................................................................................................................................................xxvii

Session EBE01: Data and Knowledge Management for e-Business I

Probabilistic Top-k Dominating Composite Service Selection ..........................................................1
    Chaogang Tang, Shiting Wen, Qing Li, Yan Xiong, and An Liu

Personalized Recommendation Based on Reviews and Ratings Alleviating the Sparsity .................................................................9
    Jingnan Xu, Xiaolin Zheng, and Weifeng Ding

k*NNCA: A Location Privacy Preserving Method for Semi-honest Mobile Users ..............................................17
    Xiao Pan, Lei Wu, and Chunhui Piao

Research on Trust Evaluation Model for Mobile Commerce Based on Structural Equation Modeling ...............................25
    Chunhui Piao, Shuzhen Wang, and Fengtao Yang

Session EBE02: Data and Knowledge Management for e-Business II

The Impact of Online Channel on the Performance of China’s Listed Retailers ...................................................33
    Shao Bing-Jia and Ning Bei-Bei
An Empirical Study of Customer Loyalty to Internet Banking in China .......................... Yongbing Jiao, Jian Yang, and Zhanfeng Zhu

A New Selective Clustering Ensemble Algorithm .......................................................... Liu Limin and Fan Xiaoping

A Parameter Model of Genetic Algorithm Regulating Ant Colony Algorithm ................. Wu Liu-ai and Fan Wen-Qing

An Interval Fuzzy Ontology Based Peer Review Assignment Method ............................... Na Xue, Jin-Xing Hao, Su-Ling Jia, and Qiang Wang

Session EBE03: Software Engineering for e-Business

A Highly Concurrent Process Virtual Machine Based on Event-driven Process Execution Model .......................................................... Dongyao Wu, Jun Wei, Chushu Gao, and Wenshen Dou

S/T/A: Meta-Modeling Run-Time Adaptation in Component-Based System Architectures .......................................................... Nikolaus Huber, André van Hoorn, Anne Kociołek, Fabian Brosig, and Samuel Kounev

A Core Broking Model for E-Markets ........................................................................... Pen-Choug Sun, Michael Odetayo, Rahat Iqbal, and Anne James

Semantic Consistency Maintenance in Editing Cross-Context Common Vocabulary ........... Jingzhi Guo and Iok Ham Lam

Session EBE04: Service Engineering

Building an Optimal Service Environment for ASBS Based on Pareto Dominance .............. Hang Song, Jun Na, Bin Zhang, Jun Guo, and Zhi-Liang Zhu

Managing Service Reputation with Vague Sets ............................................................... Ping Wang

Data Providing Web Service Selection Using Bayesian Network ................................... San-Yih Hwang, Yi-Hsuan Hsieh, and Chien-Hsiang Lee

An Empirical Study on Meta-Heuristic Search-Based Web Service Composition ............ Chengying Mao, Jifu Chen, and Xinxin Yu

Design and Implement of SOA-based Bridge Monitoring System Data Layer .................. Wendi Gao, Meina Song, and Ke Xu

Session EBE05: Integration and Industrial Applications

Do We Have Tools for Developing Green Applications? - IDE Tool with Power Management Computation Plugin ........................................................................ Tina Ho, Rebecca Chen, and Jerry Chang

A Transformation Process Model for Chinese Enterprises to the Platform-Based B2B e-commerce .................................................................................. Zhu Zongyao, Fu Cuixiao, and Meng Haihua
The Business Model Ontology for Web 2.0 Websites ................................................................. 139
  Yun Liu

Linear Modelling and Optimization to Evaluate Customer Satisfaction and Loyalty ...................... 145
  Alireza Faed, Omar K. Hussain, Mehdi Faed, and Zahra Saberi

Session EBE06: Security, Privacy and Open Source

  Fangtian Hou, Cheng Yang, Jianbo Liu, Yichun Zhang, Jiayin Tian, and Yakun Zhang

Combinatorial Mutation Approach to Web Service Vulnerability Testing Based on SOAP Message Mutations ........................................................................................................ 156
  Qing Li, Jinfu Chen, Yongzhao Zhan, Chengying Mao, and Huanhuan Wang

A Policy-Based Architecture for Web Services Security Processing ................................................. 163
  Hao Zeng, Dianfu Ma, Zhuqing Li, and Yongwang Zhao

Unified Threat Management System Approach for Securing SME’s Network Infrastructure ........................................................... 170
  Saqib Ali, Maitham H. Al Lawati, and Syed J. Naqvi

Session EBE07: Security and Business Analytics

Methodology and Tool Design for Building Return on Investment Models for IT Transformations ................................................................................................................... 177
  Chang-Shing Perng and Rong Chang

Value-Added Analysis of Bi-Lateral e-Business Services ................................................................... 185
  Zhongjie Wang, Qian Wu, and Xiaofei Xu

User-Controlled Dynamic Access Credential Enrichment for Run-time Service Selection ........................................................................................... 193
  Christoph Fritsch and Günther Pernul

The Research of a Multi-Factor Dynamic Authorization Model ......................................................... 201
  Jing Liu, Chao Liu, Dongliang Jiao, and Jiaopeng Chen

SecEPM: A Security Engineering Process Model for Electronic Business Processes .................................... 206
  Jörn Eichler

Session EBE08: Mobile Commerce

CloudExplorer: A User-Centered Cloud Browser for Cloud Services ..................................................... 214
  Yinsheng Li, Jiao Li, Feng Zhou, Yong Fang, and Hao Chen

A Ubiquitous Clinic Data Accessing Method Based on Resource Model ............................................... 221
  Lihong Jiang, Boyi Xu, Lu Fang, and Hongming Cai

An Empirical Study of User Behavioral Intention to Accept of Mobile TV: An Integration of TAM with Entertainment ......................................................................................... 227
  Chuncai Lin, Hailan Gu, and Yanpeng He
Studying Applications and Evaluation on the Next Generation Services of Broadband Communication .........................................................................................................................................................................................232

Weidong Fang, Guoqing Jia, and Jingyan Mo

Session EBE09: Cloud Computing

Approximate Keyword-based Search over Encrypted Cloud Data ........................................................................................................................................................................................................................................................................238

Ayad Ibrahim, Hai Jin, Ali A. Yassin, and Deqing Zou

Iaas Cloud Selection using MCDM Methods ........................................................................................................................................................................................................................................................................246

Zia ur Rehman, Omar K. Hussain, and Farookh K. Hussain

Dynamic Selection of Services under Temporal Constraints in Cloud Computing ........................................................................................................................................................................................................................................................................252

Yanhua Du, Xiaofei Wang, Lifeng Ai, and Xitong Li

A Fault Detection Method for Wireless Sensor Networks Based on Credible Sensor Nodes Set ........................................................................................................................................................................................................................................................................260

Zhaoxing Wang, Qiaoyan Wen, Teng Wang, and Hua Zhang

Session EBE10: Cloud Computing and Services

Design Dynamic Data Allocation Scheduler to Improve MapReduce Performance in Heterogeneous Clouds ........................................................................................................................................................................................................................................................................265

Shin-Jer Yang, Yi-Ru Chen, and Yung-Ming Hsieh

Resource Oriented Composite Transactions ........................................................................................................................................................................................................................................................................271

Rui Liu and Xin Sheng Mao

Gossip-based Hybrid Multi-attribute Overlay for Resource Discovery in Federated Clouds ........................................................................................................................................................................................................................................................................279

Guan Le, Ke Xu, and Junde Song

Automation System for Validation of Configuration and Security Compliance in Managed Cloud Services ........................................................................................................................................................................................................................................................................285

Trieu C. Chieu, Manas Singh, Chunqiang Tang, Mahesh Viswanathan, and Ashu Gupta

A QoS Evaluation Model for Test-Bed in the Cloud Computing Environment ........................................................................................................................................................................................................................................................................292

Jundian Song, Shaohua Zhang, Yanxue Gong, and Bingrong Dai

Session EBE11: e-Marketplace Integration and Interoperability (EM21)

A Survey of P2P Virtual World Infrastructure ........................................................................................................................................................................................................................................................................296

Bingqing Shen, Jingzhi Guo, and Philip Chen

Transport Hub-and-spoke Network Optimization Model Construction of Pharmaceuticals Cold-chain Logistics ........................................................................................................................................................................................................................................................................304

Li Dongjiu, Li Hao, Zhang Qingnian, and Wang Jiali

Computing Resources Market in Grid and Cloud Based on Contract Management ........................................................................................................................................................................................................................................................................308

Yinghua Sun, Zhehui Wu, Guanfeng Liu, and Zhenkuan Pan

A Scalable and Elastic Business Event Processing System ........................................................................................................................................................................................................................................................................313

Ming Li and Liangzhao Zeng
Session EBE12: Service-Oriented Applications, Integration and Collaboration (SOAIC)

A RFID-Based Kindergarten Intelligence Security System .......................................................... 321
   Zhiyuan Fang, Li Wei, Wei Chen, and Yangjun He

Cyber-Physical System Components Composition Analysis and Formal Verification
Based on Service-Oriented Architecture .................................................................................. 327
   Peng Wang, Yang Xiang, and Shao Hua Zhang

Personalized Travel Service Discovery and Usage in Cloud Environment .................................. 333
   Feng Zhou, Yong Fang, and Hao Chen

Efficient Usage of Network Bandwidth in the Cloud Architecture ........................................... 338
   Rick C.S. Chen, Chung-Ting Kao, and Hui-Kuang Chung

PLASH: An ESB-based Platform for Developing and Deploying Location Aware
Services with SOC Concepts ...................................................................................................... 344
   Yi Chun Teng, Fu Ming Huang, Yu Hsiang Huang, and Meng Chang Chen

Session EBE13: Service-Oriented Knowledge Management and Business Intelligence (SOKMBI)

A Checking Consistency Framework Based on Multi-View Models Towards Business
Process Model Repository .......................................................................................................... 350
   Lei Sun, Hongming Cai, and Lihong Jiang

Mining Contextual Knowledge for Context-Aware Recommender Systems .............................. 356
   Wenping Zhang, Raymond Lau, and Xiaohui Tao

An Advanced Rapid Alert System for Food Safety ...................................................................... 361
   Whisker T.Y. Law, Dickson K.W. Chiu, Haiyang Hu, Yi Zhuang, and Hua Hu

VMFDF: A Virtualization-based Multi-Level Fault Detection Framework for High
Availability Computing ................................................................................................................. 367
   Jianhua Zhang, Wenbo Zhang, Heng Wu, and Tao Huang

Author Index .................................................................................................................................. 374
