# SC Companion 2012

## Table of Contents

SC Companion 2012 Committees .............................................................................................................xxxv

WORKS 2012: 7th Workshop on Workflows in Support of Large-Scale Science .................................................lxi

UltraVis 2012: 2012 Workshop on Ultrascale Visualization ................................................................................lxii

IA^3 2012: Second Workshop on Irregular Applications: Architectures & Algorithms .........................................lxiv

HiPCNA 2012: 2nd International Workshop on High Performance Computing, Networking and Analytics for the Power Grid ............................................................................................lxvi

PMBS 2012: 3rd International Workshop on Performance Modelling, Benchmarking and Simulation of High Performance Computing Systems .................................................................................lxvii

NDM 2012: Second International Workshop on Network-Aware Data Management .................................................lxix

ScalA 2012: Workshop on Latest Advances in Scalable Algorithms for Large-Scale Systems ...........................................lxxi

DISCS 2012: International Workshop on Data Intensive Scalable Computing Systems ..................................................lxxiv
7th Parallel Data Storage Workshop (PDSW’12)

Discovering Structure in Unstructured I/O ................................................................. 1
   Jun He, John Bent, Aaron Torres, Gary Grider, Garth Gibson, Carlos Maltzahn,
   and Xian-He Sun

Compressing Intermediate Keys between Mappers and Reducers
in SciHadoop ............................................................................................................. 7
   Adam Crume, Joe Buck, Carlos Maltzahn, and Scott Brandt

Towards Dynamic Scripted pNFS Layouts ................................................................. 13
   Matthias Grawinkel, Tim Süß, Gregor Best, Ivan Popov, and André Brinkmann

IOPin: Runtime Profiling of Parallel I/O in HPC Systems ........................................ 18
   Seong Jo Kim, Seung Woo Son, Wei-keng Liao, Mahmut Kandemir,
   Rajeev Thakur, and Alok Choudhary

SAN Optimization for High Performance Storage with RDMA Data Transfer .......... 24
   Jae Woo Choi, Young Jin Yu, Hyenosang Eom, Heon Young Yeom,
   and Dong In Shin

A Case for Scaling HPC Metadata Performance through De-specialization ............. 30
   Swapnil Patil, Kai Ren, and Garth Gibson

An Evolutionary Path to Object Storage Access ..................................................... 36
   David Goodell, Seong Jo Kim, Robert Latham, Mahmut Kandemir, and Robert Ross

DataMods: Programmable File System Services ..................................................... 42
   Noah Watkins, Carlos Maltzahn, Scott Brandt, and Adam Manzanares

A Case for Optimistic Coordination in HPC Storage Systems .................................. 48
   Philip Carns, Kevin Harms, Dries Kimpe, Robert Ross, Justin Wozniak,
   Lee Ward, Matthew Curry, Ruth Klundt, Geoff Danielson, Cengiz Karakoyunlu,
   John Chandy, Bradley Settlemeyer, and William Gropp

7th Workshop on Workflows in Support of Large-Scale Science (WORKS’12)

Evaluating Workflow Tools with SDAG ................................................................. 54
   Muhammad Ali Amer and Robert Lucas

Predicting the Execution Time of Workflow Activities Based on Their Input
Features .................................................................................................................. 64
   Tudor Miu and Paolo Missier

A Workflow-Based Network Advisor for Data Movement with End-to-End
Performance Optimization ..................................................................................... 73
   Patrick Brown, Mengxia Zhu, Qishi Wu, Daqing Yun, and Jason Zurawski
Peer-to-Peer Data Sharing for Scientific Workflows on Amazon EC2 ..................................................82
   Rohit Agarwal, Gideon Juve, and Ewa Deelman

Re-Using Workflow Fragments across Multiple Data Domains ..........................................................90
   Ricky J. Sethi, Hyunjoon Jo, and Yolanda Gil

Hypermedia Workflow: A New Approach to Data-Driven Scientific Workflows ..................................100
   Bartosz Balis

A General Approach to Real-Time Workflow Monitoring ........................................................................108
   Karan Vahi, Ian Harvey, Taghrid Samak, Daniel Gunter, Kieran Evans,
   Dave Rogers, Ian Taylor, Monte Goode, Fabio Silva, Eddie Al-Shkarchi,
   Gaurang Mehta, Andrew Jones, and Ewa Deelman

Modeling and Querying Scientific Workflow Provenance in the D-OPM .............................................119
   Víctor Cuevas-Vicenttín, Saumen Dey, Michael Li Yuan Wang, Tianhong Song,
   and Bertram Ludäscher

Handling Failures in Parallel Scientific Workflows Using Clouds .........................................................129
   Flavio Costa, Daniel de Oliveira, Kary Ocaña, Eduardo Ogasawara, Jonas Dias,
   and Marta Mattoso

Integrating Policy with Scientific Workflow Management for Data-Intensive
Applications ...............................................................................................................................................140
   Ann L. Chervenak, David E. Smith, Weiwei Chen, and Ewa Deelman

Planning Data Intensive Workflows on Inter-domain Resources Using
the Network Service Interface (NSI) ........................................................................................................150
   Zhiming Zhao, Jeroen van der Ham, Arie Taal, Ralph Koning, Cosmin Dumitru,
   Adianto Wibisono, Paola Grosso, and Cees de Laat

Acceleration of Data-Intensive Workflow Applications by Using File Access
History .......................................................................................................................................................157
   Miki Horiuchi and Kenjiro Taura

The 7th Workshop on Ultrascale Visualization

An Analysis of a Distributed GPU Implementation of Proton Computed
Tomographic (pCT) Reconstruction ........................................................................................................166
   Kirk L. Duffin, Nicholas T. Karonis, Caesar E. Ordoñez, Michael E. Papka,
   George Coutrakon, Bela Erdelyi, Eric C. Olson, and Thomas D. Uram

Stochastic Approach for Integrated Rendering of Volumes
and Semi-transparent Surfaces .............................................................................................................176
   Naohisa Sakamoto and Koji Koyamada

Meshing the Universe: Integrating Analysis in Cosmological Simulations ........................................186
   Tom Peterka, Juliana Kwan, Adrian Pope, Hal Finkel, Katrin Heitmann,
   Salman Habib, Jingyuan Wang, and George Zagaris
Scalable Visual Queries for Data Exploration on Large, High-Resolution 3D Displays .................................................................196
Khairi Reda, Andrew Johnson, Victor Mateevitsi, Catherine Offord, and Jason Leigh

The SDAV Software Frameworks for Visualization and Analysis on Next-Generation Multi-Core and Many-Core Architectures .................................................................206
Christopher Sewell, Jeremy Meredith, Kenneth Moreland, Tom Peterka, Dave DeMarle, Li-ta Lo, James Ahrens, Robert Maynard, and Berk Geveci

Load Balanced Parallel GPU Out-of-Core for Continuous LOD Model Visualization ..................................................................................215
Chao Peng, Peng Mi, and Yong Cao

Oh, $#*@! Exascale! The Effect of Emerging Architectures on Scientific Discovery .....................................................................................................................224
Kenneth Moreland

IA^3 2012 - Second Workshop on Irregular Applications: Architectures & Algorithms

CHOMP: A Framework and Instruction Set for Latency Tolerant, Massively Multithreaded Processors .................................................................232
John D. Leidel, Kevin Wadleigh, Joe Bolding, Tony Brewer, and Dean Walker

Exploiting Coarse-Grained Parallelism in B+ Tree Searches on an APU .................................................................................................240
Mayank Daga and Mark Nutter

Breadth First Search on APEnet+ ..............................................................................................................................248
Massimo Bernaschi, Mauro Bisson, Enrico Mastrostefano, and Davide Rossetti

An Irregular Approach to Large-Scale Computed Tomography on Multiple Graphics Processors Improves Voxel Processing Throughput ........................................................................254

Executing Optimized Irregular Applications Using Task Graphs within Existing Parallel Models ......................................................................................261
Christopher D. Krieger, Michelle Mills Strout, Jonathan Roelofs, and Amanreet Bajwa

Position Paper: Logic Programming for Parallel Irregular Applications .................................................................................................269
Jeremiah J. Willcock and Andrew Lumsdaine
Towards Efficient N-x Contingency Selection Using Group betweenness Centrality .................................................................273
  Mahantesh Halappanavar, Yousu Chen, Robert Adolf, David Haglin, Zhenyu Huang, and Mark Rice

Real-Time Simulation Using Transient Stability, ElectroMagnetic Transient and FPGA-Based High-Resolution Solvers ..............................................................................................................................283
  Christian Dufour, Vahid Jalili-Marandi, and Jean Bélanger

EmPower: An Efficient Load Balancing Approach for Massive Dynamic Contingency Analysis in Power Systems .................................................................................................................................289
  Siddhartha Kumar Khaitan and James D. McCalley

Real-Time Power System Dynamics Simulation Using a Parallel Block-Jacobi Preconditioned Newton-GMRES Scheme ..........................................................................................................................299
  Shrirang Abhyankar and Alexander J. Flueck

Towards Real-Time High Performance Computing for Power Grid Analysis ..........................................................................................................................306
  Peter Hui, Barry Lee, and Satish Chikkagoudar

A High Performance Computing Network and System Simulator for the Power Grid: NGNS^2 .................................................................................................................................313
  Oreste Villa, Antonino Tumeo, Selim Ciraci, Jeff A. Daily, and Jason C. Fuller

TDPSS: A Scalable Time Domain Power System Simulator for Dynamic Security Assessment .................................................................................................................................323
  Siddhartha Kumar Khaitan and James D. McCalley

Improved Real-Time Computation Engine for a Dispatcher Training Center of the European Transmission Network .................................................................................................................................333
  Bertrand Haut, François-Xavier Bouchez, and Fortunato Villella

Evaluation of Counter-Based Dynamic Load Balancing Schemes for Massive Contingency Analysis on over 10,000 Cores .................................................................................................................................341
  Yousu Chen, Zhenyu Huang, and Mark Rice

Predictive Dynamic Simulation for Large-Scale Power Systems through High-Performance Computing .................................................................................................................................347
  Zhenyu Huang, Shuangshuang Jin, and Ruisheng Diao

Navigating an Evolutionary Fast Path to Exascale

Modeling a Million-Node Dragonfly Network Using Massively Parallel Discrete-Event Simulation

Misbah Mubarak, Christopher D. Carothers, Robert Ross, and Philip Carns

Performance Modeling of Algebraic Multigrid on Blue Gene/Q: Lessons Learned

Hormozd Gahvari, William Gropp, Kirk E. Jordan, Martin Schulz, and Ulrike Meier Yang

Developing Performance-Portable Molecular Dynamics Kernels in OpenCL

S. J. Pennycook and S. A. Jarvis

Performance Tuning of Matrix Multiplication in OpenCL on Different GPUs and CPUs

Kazuya Matsumoto, Nachito Nakasato, and Stanislav G. Sedukhin

Performance Modeling for Dense Linear Algebra

Elmar Peise and Paolo Bientinesi

Unprecedented Scalability and Performance of the New NNSA Tri-Lab Linux Capacity Cluster 2

Towards Performance Predictive Application-Dependent Workload Characterization

Waleed Alkohlani and Jeanine Cook

Towards the Automated Generation of Hard Disk Models through Physical Geometry Discovery

S. A. Wright, S. J. Pennycook, and S. A. Jarvis

Improving the Accuracy and Efficiency of Time-Independent Trace Replay

Frédéric Desprez, George S. Markomanolis, and Frédéric Suter

Trace Driven Data Structure Transformations

Tomislav Janjusic, Krishna M. Kavi, and Christos Kartsaklis

Accelerating Hydrocodes with OpenACC, OpenCL and CUDA

J. A. Herdman, W. P. Gaudin, S. McIntosh-Smith, M. Boulton, D. A. Beckingsale, A. C. Mallinson, and S. A. Jarvis
Designing Configurable, Modifiable and Reusable Components for Simulation of Multicore Systems .................................................................472

Jun Wang, Jesse Beu, Sudhakar Yalamanchili, and Tom Conte

An Analytical Study of Loop Tiling for a Large-Scale Unstructured Mesh Application ..............................................................................................477

M.B. Giles, G. R. Mudalige, C. Bertolli, P.H.J. Kelly, E. László, and I. Reguly

Climate Knowledge Discovery Workshop

Exploratory Climate Data Visualization and Analysis Using DV3D and UVCDAT ........................................................................................................483

Thomas P. Maxwell

Using GLIDER for Knowledge Discovery in Climate Science to Visualize, Analyze and Mine Satellite Imagery ........................................................................488

Sara Graves, Rahul Ramachandran, and Todd Berendes

Building a Climatology of Mountain Gap Wind Jets and Related Coastal Upwelling ...............................................................................................495

Sara J. Graves, Xiang Li, Ken Keiser, and Deborah K. Smith

Boundary Effects in Network Measures of Spatially Embedded Networks .................................................................................................................500

Aljoscha Rheinwalt, Norbert Marwan, Jürgen Kurths, Peter Werner, and Friedrich-Wilhelm Gerstengarbe

The Second International Workshop on Network-Aware Data Management

How GridFTP Pipelining, Parallelism and Concurrency Work: A Guide for Optimizing Large Dataset Transfers .........................................................506

Esma Yildirim, JangYoung Kim, and Tevfik Kosar

Accelerating Data Movement Leveraging End-System and Network Parallelism ............................................................................................................516

Jun Yi, Rajkumar Kettimuthu, and Venkatram Vishwanath

A Dynamic Virtual Networks Solution for Cloud Computing .................................................................................................................................526

Davide Salomoni and Marco Caberletti

Hadoop Acceleration in an OpenFlow-Based Cluster ..............................................................................................................................................535

Sandhya Narayan, Stuart Bailey, and Anand Daga

A New Framework for Publishing and Sharing Network and Security Datasets ........................................................................................................539

Mohammed S. Gadelrab and Ali Ghorbani

Adaptive Data Transfers that Utilize Policies for Resource Sharing ..........................................................................................................................547

Junmin Gu, David Smith, Ann L. Chervenak, and Alex Sim

A Network-Aware Object Storage Service ...............................................................................................................................................................556

Shigetoshi Yokoyama, Nobukazu Yoshioka, and Motonobu Ichimura
Efficient Attribute-Based Data Access in Astronomy Analysis ...............................................562
B. Ma, A. Shoshani, A. Sim, K. Wu, Y. Byun, J. Hahm, and M.-S. Shin

Python for High Performance and Scientific Computing
EasyBuild: Building Software with Ease ......................................................................................572
Kenneth Hoste, Jens Timmerman, Andy Georges, and Stijn De Weirdt

Efficient Dynamic Derived Field Generation on Many-Core Architectures Using Python ..........................................................583
Cyrus Harrison, Paul Navrátil, Maysam Moussalem, Ming Jiang, and Hank Childs

A Python HPC Framework: PyTrilinos, ODIN, and Seamless ..................................................593
K.W. Smith, W.F. Spotz, and S. Ross-Ross

Mrs: MapReduce for Scientific Computing in Python .................................................................600
Andrew McNabb, Jeffrey Lund, and Kevin Seppi

Workshop on Latest Advances in Scalable Algorithms for Large-Scale Systems (ScalA)
A Highly Scalable Approach for Time Parallelization of Long Range Forecasts ..........609
Vishwas Rao, Alexandru Cioaca, and Adrian Sandu

A Task Parallel Implementation of Fast Multipole Methods ......................................................617
Kenjiro Taura, Jun Nakashima, Rio Yokota, and Naoya Maruyama

Performance and Power Characteristics of Matrix Multiplication Algorithms on Multicore and Shared Memory Machines ..........................................................626
Yonghong Yan, Jeremy Kemp, Xiaonan Tian, Abid Muslim Malik, and Barbara Chapman

GPU-Based Parallelization of Kernel Polynomial Method for Solving LDOS ................633
Shixun Zhang, Shinichi Yamagiwa, and Seiji Yunoki

Improving Fault Tolerance and Accuracy of a Distributed Reduction Algorithm ................643
Gerhard Niederbrucker, Hana Straková, and Wilfried N. Gansterer

Preparing Applications for Exascale through Co-design
A PGAS Implementation by Co-design of the ECMWF Integrated Forecasting System (IFS) ..................................................................................................................652
George Mozdzynski, Mats Hamrud, Nils Wedi, Jens Doleschal, and Harvey Richardson

Enabling In Situ Pre- and Post-processing for Exascale Hemodynamic Simulations - A Co-design Study with the Sparse Geometry Lattice-Boltzmann Code HemeLB ..........................................................................................................................662
Fang Chen, Markus Flatken, Achim Basermann, Andreas Gerndt, James Hetherington, Timm Krüger, Gregor Matura, and Rupert W. Nash
Towards Improving the Communication Performance of CRESTA's Co-Design
Application NEK5000 ........................................................................................................669
    Michael Schliephake and Erwin Laure

5th International Workshop on Multi-Core Computing Systems (MuCoCoS 2012); Focus: Performance Portability and Tuning
Improving Energy Efficiency through Parallelization and Vectorization on Intel Core i5 and i7 Processors ..........675
    Juan M. Cebrián, Lasse Natvig, and Jan Christian Meyer
Energy-Centric DVFS Controlling Method for Multi-core Platforms ........................................685
    Shin-gyu Kim, Chanho Choi, Hyeonsang Eom, Heon Y. Yeom, and Huichung Byun
Experiences with OpenMP, PGI, HMPP and OpenACC Directives on ISO/TTI Kernels ..........................................................691
    Sayan Ghosh, Terrence Liao, Henri Calandra, and Barbara M. Chapman
A Low Level Component Model Enabling Performance Portability of HPC Applications ........................................701
    Julien Bigot, Zhengxiong Hou, Christian Perez, and Vincent Pichon
The PEPPHER Composition Tool: Performance-Aware Dynamic Composition of Applications for GPU-Based Systems ..................................................711
    Usman Dastgeer, Lu Li, and Christoph Kessler
DetLock: Portable and Efficient Deterministic Execution for Shared Memory Multicore Systems ...........................................................721
    Hamid Mushtaq, Zaid Al-Ars, and Koen Bertels

The International Workshop on Data Intensive Scalable Computing Systems - DISCS
DI-MMAP: A High Performance Memory-Map Runtime for Data-Intensive Applications ..............................................................731
    Brian Van Essen, Henry Hsieh, Sasha Ames, and Maya Gokhale
In-situ Feature-Based Objects Tracking for Large-Scale Scientific Simulations ................................................736
    Fan Zhang, Solomon Lasluisa, Tong Jin, Ivan Rodero, Hoang Bui, and Manish Parashar
A Static Binary Instrumentation Threading Model for Fast Memory Trace Collection .................................................................741
    Michael A. Laurenzano, Joshua Peraza, Laura Carrington, Ananta Tiwari, William A. Ward, and Roy Campbell
A Plugin for HDF5 Using PLFS for Improved I/O Performance and Semantic Analysis ...........................................................746
    Kshitij Mehta, John Bent, Aaron Torres, Gary Grider, and Edgar Gabriel
Integrating High Performance File Systems in a Cloud Computing Environment .......................................................................................................................... 753
Abhisek Pan, John Paul Walters, Vijay S. Pai, Dong-In D. Kang, and Stephen P. Crago

Optimizing Local File Accesses for FUSE-Based Distributed Storage ................................................................................................................................. 760
Shun Ishiguro, Jun Murakami, Yoshihiro Oyama, and Osamu Tatebe

Low-latency Memory-Mapped I/O for Data-Intensive Applications on Fast Storage Devices ........................................................................................................... 766
Nae Young Song, Young Jin Yu, Woong Shin, Hyeonsang Eom, and Heon Young Yeom

A Coarray Fortran Implementation to Support Data-Intensive Application Development .............................................................................................................. 771
Deepak Eachempati, Alan Richardson, Terrence Liao, Henri Calandra, and Barbara Chapman

Architecture Design of a Data Intensive Satellite Image Processing and Distribution System ........................................................................................................... 777
Ziliang Zong and Brian Romoser

A Systematic Methodology to Architecting High Performance Storage Systems .................................................................................................................. 782
Zhiqi Tao, Andreas Dilger, Eric Barton, and Byron Neitzel

A Highly-Accurate and Low-Overhead Prediction Model for Transfer Throughput Optimization ........................................................................................................... 787
Jang Young Kim, Esma Yildirim, and Tevfik Kosar

Reducing the De-linearization of Data Placement to Improve Deduplication Performance ............................................................................................................... 796
Yujuan Tan, Zhichao Yan, Dan Feng, E. H.-M. Sha, and Xiongzi Ge

Efficient HPC Data Motion via Scratchpad Memory ................................................................................................................................. 801
Kayla O Seager, Ananta Tiwari, Michael A. Laurenzano, Joshua Peraza, Pietro Cicotti, and Laura Carrington

Towards Energy Efficient Data Intensive Computing Using IEEE 802.3az ................................................................................................................................. 806
Dimitar Pavlov, Joris Soeurt, Paola Grosso, Zhiming Zhao, Karel van der Veldt, Hao Zhu, and Cees de Laat
3rd SC Workshop on Petascale Data Analytics: Challenges and Opportunities

Tight Coupling of R and Distributed Linear Algebra for High-Level Programming with Big Data ..........................................................811  
Drew Schmidt, George Ostrouchov, Wei-Chen Chen, and Pragneshkumar Patel

Quality-Aware Data Management for Large Scale Scientific Applications ...........................................816  
Hongbo Zou, Fang Zheng, Matthew Wolf, Greg Eisenhauer, Karsten Schwan, Hasan Abbasi, Qing Liu, Norbert Podhorszki, and Scott Klasky

Flexible Analysis Software for Emerging Architectures ..............................................................821  
Kenneth Moreland, Brad King, Robert Maynard, and Kwan-Liu Ma

Toward Real Time Data Analysis for Smart Grids .................................................................827  
Jian Yin, Ian Gorton, and Sharma Poorva

Scalable Multi-Instance Learning Approach for Mapping the Slums of the World .................................................................833  
Ranga Raju Vatsavai

Designing a Collaborative Filtering Recommender on the Single Chip Cloud Computer ..............................................................838  
Aalap Tripathy, Atish Patra, Suneil Mohan, and Rabi Mahapatra

Third Annual Workshop on Energy Efficient High Performance Computing - Redefining System Architecture and Data Centers

Energy Efficient HPC Data Centers ...................................................................................848  
Bill Tschudi and David Martinez

Energy Efficiency Metrics .................................................................................................898  
Michael K. Patterson

The Analysis of Impact of Energy Efficiency Requirements on Programming Environments ..................................................................920  
John Shalf

New ASHRAE Thermal Guidelines for Air and Liquid Cooling .................................................942  
Michael J. Ellsworth Jr.

Case Study: LRZ Liquid Cooling, Energy Management, Contract Specialities ...............................962  
Herbert Huber, Axel Auweter, Torsten Wilde, Ingmar Meijer, Charles Archer, Torsten Bloth, Achim Bömelburg, and Steffen Waitz

Philosophy 301: But Can You "Handle the Truth"? ......................................................................993  
Nicolas Dubé

Bytes and BTUs: Keys to a Net Zero ..................................................................................1018  
Steve Hammond
Zero-Overhead Interfaces for High-Performance Computing Libraries and Kernels .................................................................1139
Andreas Schäfer and Dietmar Fey

**Workshop on High Performance Computational Finance (WHPCF12)**

High Performance Implementation of an Econometrics and Financial Application on GPUs ..........................................................................................................................1147
Michael Creel and Mohammad Zubair

Analysis and Optimization of Financial Analytics Benchmark on Modern Multi- and Many-core IA-Based Architectures .................................................................1154
Mikhail Smelyanskiy, Jason Sewall, Dhiraj D. Kalamkar, Nadathur Satish, Pradeep Dubey, Nikita Astafiev, Ilya Burylov, Andrey Nikolaev, Sergey Maidanov, Shuo Li, Sunil Kulkarni, Charles H. Finan, and Ekaterina Gonina

The Application of High Performance Computing to Solvency and Profitability Calculations for Life Assurance Contracts ..........................................................................................1163
Mark Tucker and J. Mark Bull

End-User Driven Technology Benchmarks Based on Market-Risk Workloads .................................................................1171
Peter Lankford, Lars Ericson, and Andrey Nikolaev

Parallel Simulations for Analysing Portfolios of Catastrophic Event Risk ...........................................................................1176
A. K. Bahl, O. Baltzer, A. Rau-Chaplin, and B. Varghese

Many-Core Accelerated LIBOR Swaption Portfolio Pricing .................................................................................................1185
Jörg Lotze, Paul D. Sutton, and Hicham Lahlou

**Sustainable HPC Cloud**

Parallel Timing Model Applied to Hadoop Applications on a Private Cloud .................................................................1193
Jennine Nash

Integrate Military with Distributed Cloud Computing and Secure Virtualization .................................................................1200
J. Mounika Reddy and J. Mary Monika

DS-CUDA: A Middleware to Use Many GPUs in the Cloud Environment .............................................................................1207
Minoru Oikawa, Atsushi Kawai, Kentaro Nomura, Kenji Yasuoka, Kazuyuki Yoshikawa, and Tetsu Narumi

Program Scalability Analysis for HPC Cloud: Applying Amdahl's Law to NAS Benchmarks .................................................................1215
Justin Y. Shi, Moussa Taifi, Aakash Pradeep, Abdallah Khreishah, and Vivek Antony

Using Virtual Private Networks for Reliable VM Based HPC Systems .............................................................................1226
Jeremiah Nielsen and Thomas Hacker
Understanding Cloud Data Using Approximate String Matching and Edit Distance ........................................................................................................................................................................1234
Joseph Jupin, Justin Y. Shi, and Zoran Obradovic

5th Workshop on Many-Task Computing on Grids and Supercomputers (MTAGS 2012)
Community Accessible Datastore of High-Throughput Calculations:
Experiences from the Materials Project ..........................................................1244
Dan Gunter, Shreyas Cholia, Anubhav Jain, Michael Kocher, Kristin Persson,
Lavanya Ramakrishnan, Shyue Ping Ong, and Gerbrand Ceder

Resource Management for Dynamic MapReduce Clusters in Multicluster Systems ........................................................................................................................................................................................................................................................................................................1252
Bogdan Ghit, Nezih Yigitbasi, and Dick Epema

A Comparative Study of Data Processing Approaches for Text Processing Workflows ........................................................................................................................................................................................................................................................................................................1260
Ting Chen and Kenjiro Taura

A Scalable Master-Worker Architecture for PaaS Clouds ................................1268
Vibhor Aggarwal, Shubhashis Sengupta, Vibhu Saujanya Sharma,
and Aravindan Santharam

HOG: Distributed Hadoop MapReduce on the Grid ........................................1276
Chen He, Derek Weitzel, David Swanson, and Ying Lu

A Hybrid Scheduling Approach for Scalable Heterogeneous Hadoop Systems ........................................................................................................................................................................................................................................................................................................1284
Aysan Rasooli and Douglas G. Down

High-Performance Computing Meets Databases
Improving Data Analysis Performance for High-Performance Computing with Integrating Statistical Metadata in Scientific Datasets ..........................................................1292
Jialin Liu and Yong Chen

Light-Weight Data Management Solutions for Visualization and Dissemination of Massive Scientific Datasets - Position Paper ..........................................................1296
Gagan Agrawal and Yu Su

Scientific Computing Doesn't Need noSQL .........................................................1301
David M. Butler

The Sheaf Data Model: A Rigorous Data Model for Scientific Computing ..........................1303
David M. Butler

Graph Database Design Challenges Using HPC Platforms ................................1306
Prajakta Kalmegh and Shamkant B. Navathe
A Graph Database Approach for Efficient and Scalable Management of Simulations .................................................................1310
   Jeong-Hyon Hwang, Jeremy Birnbaum, Rohini Vabbalareddy, S. S. Ravi, and Chanyeol Park

Data Challenges in High-Performance Risk Analytics .................................................................1312
   Blessen Varghese and Andrew Rau-Chaplin

Satisfying Data-Intensive Queries Using GPU Clusters ................................................................1314
   Jeffrey Young, Haicheng Wu, and Sudhakar Yalamanchili

Using Chunked Extendible Array for Physical Storage of Scientific Datasets ...............................1315
   Ekow Otoo, Gideon Nimako, and Daniel Ohene-Kwofie

GADBMS: A Framework for Scalable Array Analytics .........................................................1322
   Tyler Clemons, Srinivasan Parthasarathy, and P. Sadayappan

Project Trident: An Investigation into Integrating Databases, Analytics, and High-Performane Computing .........................................................1326
   Rajesh Bordawekar

Array Databases .....................................................................................................................1329
   Peter Baumann

**Posters and Electronic Posters**

Abstract: Matrices Over Runtime Systems at Exascale .................................................................1330
   Emmanuel Agullo, George Bosilca, Berenger Bramas, Cedric Castagnede,
   Olivier Coulaud, Eric Darve, Jack Dongarra, Mathieu Faverge,
   Nathalie Furmento, Luc Giraud, Xavier Lacoste, Julien Langou, Hatem Ltaief,
   Matthias Messner, Raymond Namyst, Pierre Ramet, Toru Takahashi,
   Samuel Thibault, Stanimire Tomov, and Ichitaro Yamazaki

Poster: Matrices over Runtime Systems at Exascale .................................................................1332
   Emmanuel Agullo, George Bosilca, Berenger Bramas, Cedric Castagnede,
   Olivier Coulaud, Eric Darve, Jack Dongarra, Mathieu Faverge,
   Nathalie Furmento, Luc Giraud, Xavier Lacoste, Julien Langou, Hatem Ltaief,
   Matthias Messner, Raymond Namyst, Pierre Ramet, Toru Takahashi,
   Samuel Thibault, Stanimire Tomov, and Ichitaro Yamazaki

Poster: Assessing the Predictive Capabilities of Mini-applications ..........................................1333
   Richard Barrett, Paul Crozier, Doug Doerfler, Simon Hammond, Mike Heroux,
   Paul Lin, Tim Trucano, Courtenay Vaughan, and Alan Williams

Abstract: Towards Highly Accurate Large-Scale Ab Initio Calculations Using Fragment Molecular Orbital Method in GAMESS .........................................................1335
   Maricris L. Mayes, Graham D. Fletcher, and Mark S. Gordon

Poster: Towards Highly Accurate Large-Scale Ab Initio Calculations Using Fragment Molecular Method in GAMESS .........................................................1336
   Maricris L. Mayes, Graham D. Fletcher, and Mark S. Gordon
Poster: Acceleration of the BLAST Hydro Code on GPU

Tingxing Dong, Tzanie Kolev, Robert Rieben, and Veselin Dobrev

Abstract: A Novel Hybrid CPU-GPU Generalized Eigensolver for Electronic Structure Calculations Based on Fine Grained Memory Aware Tasks

Raffaele Solcà, Azzam Haidar, Stanimire Tomov, Thomas C. Schulthess, and Jack Dongarra

Poster: A Novel Hybrid CPU-GPU Generalized Eigensolver for Electronic Structure Calculations Based on Fine Grained Memory Aware Tasks

Raffaele Solcà, Azzam Haidar, Stanimire Tomov, Thomas C. Schulthess, and Jack Dongarra

Abstract: HTCaaS: A Large-Scale High-Throughput Computing by Leveraging Grids, Supercomputers and Cloud

Seungwoo Rho, Seoyoung Kim, Sangwan Kim, Seokkyoo Kim, Jik-Soo Kim, and Soonwook Hwang

Poster: HTCaaS: A Large-Scale High-Throughput Computing by Leveraging Grids, Supercomputers and Cloud

Seungwoo Rho, Seoyoung Kim, Sangwan Kim, Seokkyoo Kim, Jik-Soo Kim, and Soonwook Hwang

Abstract: Three Steps to Model Power-Performance Efficiency for Emergent GPU-Based Parallel Systems

Shuaiwen Leon Song, Chun-yi Su, Barry Rountree, and Kirk W. Cameron

Poster: Three Steps to Model Power-Performance Efficiency for Emergent GPU-Based Parallel Systems

Shuaiwen Leon Song

Abstract: Impact of Integer Instructions in Floating Point Applications

Hisanobu Tomari and Kei Hiraki

Poster: The Impact of Integer Instructions in Floating Point Applications

Hisanobu Tomari and Kei Hiraki

Abstract: Toward Operating System Assisted Hierarchical Memory Management for Heterogeneous Architectures

Balazs Gerofi, Akio Shimada, Atsushi Hori, and Yutaka Ishikawa

Poster: Toward Operating System Assisted Hierarchical Memory Management for Heterogeneous Architectures

Balazs Gerofi, Akio Shimada, Atsushi Hori, and Yutaka Ishikawa

Poster: MPACK 0.7.0: Multiple Precision Version of BLAS and LAPACK

Maho Nakata

Abstract: Hybrid Breadth First Search Implementation for Hybrid-Core Computers

Kevin Wadleigh, John Amelio, Kirby Collins, and Glen Edwards
Poster: Hybrid Breadth First Search Implementation for Hybrid-Core
Computers .................................................................1355

Kevin Wadleigh, John Amelio, Kirby Collins, and Glen Edwards

Abstract: Interface for Performance Environment Autoconfiguration Framework ........................................1356

Liang Men, Bilel Hadri, and Haihang You

Abstract: Imaging through Cluttered Media Using Electromagnetic
Interferometry on a Hardware-Accelerated High-Performance Cluster ................................................. N/A

Esam El-Araby, Ozlem Kilic, and Vinh Dang

Poster: Imaging through Cluttered Media Using Electromagnetic Interferometry
on a Hardware-Accelerated High-Performance Cluster .................................................................1359

Esam El-Araby, Ozlem Kilic, and Vinh Dang
