INDEX OF CONTENTS .......................................................... 5
WELCOME MESSAGE ............................................................. 11
RESEARCH IN ENGINEERING EDUCATION SYMPOSIUM 2011 ......................................................... 11
CONFERENCE STRUCTURE .................................................. 13
PLANNING COMMITTEE MEMBERS .................................. 13
LOCAL ORGANIZING MEMBERS ........................................ 13
INTERNATIONAL ADVISORY COMMITTEE ....................... 14
CONFERENCE SECRETARIAT .............................................. 14
CONFERENCE PLANNING .................................................... 15
TUESDAY, 4th OCTOBER .................................................... 15
WEDNESDAY, 5th OCTOBER ............................................. 15
THURSDAY, 6th OCTOBER ............................................... 16
FRIDAY, 7th OCTOBER ..................................................... 17
CONFERENCE SCHEDULE .................................................... 19
CONFERENCE SESSION ...................................................... 21
SESSION 1: WEDNESDAY MORNING .................................. 21
SESSION 2: WEDNESDAY AFTERNOON .............................. 21
SESSION 3: WEDNESDAY AFTERNOON .............................. 22
SESSION 4: THURSDAY MORNING ..................................... 22
SESSION 5: THURSDAY AFTERNOON ............................... 23
SESSION 6: FRIDAY MORNING .......................................... 23
SESSION 7: FRIDAY MORNING .......................................... 24
TABLE OF SESSIONS .......................................................... 25
SESSION 1 – WEDNESDAY MORNING ................................ 25
Turn A: Threshold issues – Chair: Maura Borrego .......... 25
Turn B: Teaching and Learning 1 – Chair: Jennifer Turns . 25
Turn C: Tools 1 – Chair: Barbara M. Olds .................... 26
Turn D: Learning Strategies 1 – Chair: Bill Williams .. 26
SESSION 2 – WEDNESDAY AFTERNOON .......................... 27
Turn A: Engineering Education Research – Chair: Llewellyn Mann ... 27
Turn B: Project-Based Learning – Chair: Milo Koretsky ... 27
Turn C: Technology in Learning – Chair: Wendy Newstetter .. 28
Turn D: Teaching practice – Chair: Anne Gardner .... 29
SESSION 3 – WEDNESDAY AFTERNOON ............................ 30
Turn A: Learning strategies 2 – Chair: Cynthia J. Atman ... 30
Turn B: Engagement – Chair: Roger Hadgraft .............. 30
Turn C: Teaching and learning – Chair: Duncan Fraser ... 31
Turn D: Knowledge and leadership – Chair: Luis Manuel Cerda ... 32
SESSION 4 – THURSDAY MORNING ................................... 33
PROCEEDINGS OF THE CONFERENCE ........................................................................................................ 43
Universidad Politécnica de Madrid (UPM) 
Madrid, 4th - 7th October 2011

SESSION 5 – THURSDAY MORNING ........................................................................................................ 35

Turn A: Curricula 1 – Chair: Amparo Camacho ...................................................................................... 33
Turn B: Assessment 1 – Chair: Edith Gummer ......................................................................................... 33
Turn C: Transition 1 – Chair: Robin Clark ................................................................................................. 34
Turn D: Teaching and learning 3 – Chair: Michael Prince ....................................................................... 34

SESSION 6 – FRIDAY MORNING ............................................................................................................ 38

Turn A: Assessment 2 – Chair: Erik de Graff ........................................................................................... 38
Turn B: Tools 2 – Chair: James Pellegrino ................................................................................................. 38
Turn C: Teaching and learning 4 – Chair: Mario Letelier ........................................................................ 39
Turn D: Diversity – Chair: Lorraine Fleming ............................................................................................ 40

SESSION 7: FRIDAY MORNING ............................................................................................................. 41

Turn A: Educational Research – Chair: Maizam Alias ........................................................................... 41
Turn B: Teaching and learning 5 – Chair: Gregory Light ....................................................................... 41
Turn C: Tools 3 – Chair: Jonte Bernhard .................................................................................................. 42
Turn D: Miscellaneous – Chair: James Trevelyan .................................................................................... 42

PROCEEDINGS OF THE CONFERENCE ........................................................................................................ 43

1st SESSION – WEDNESDAY MORNING ................................................................................................... 43

Topic: Threshold Issues – Chair: Maura Borrego ..................................................................................... 43

Investigating and addressing student difficulties in introductory electrical engineering ......................... 43
Analytical tools in engineering education research: The “learning a complex concept” model, threshold concepts and key concepts in understanding and designing for student learning ................................................................. 51
Methodology for automated generation of multiple choice questions in self-assessment ......................... 61

Topic: Teaching and learning 1 – Chair: Jennifer Turns ......................................................................... 70

A qualitative inquiry into first year engineering student success .............................................................. 70
Sharing the past, sharing the future, and sharing oneself in portfolio studios ............................................ 78
Engineering Student’s Conceptions of Model Uses in Design ................................................................. 87

Topic: Tools 1 – Chair: Barbara M. Olds .................................................................................................... 95

Instrumental development: Engineering-specific Epistemological/Ontological beliefs .............................. 95
Virtual Instruments in dimensional metrology ............................................................................................ 106
An expert study of transfer in an Authentic Project ................................................................................. 119

Topic: Learning strategies 1 – Chair: Bill Williams ................................................................................ 127

Engineering learning to Engineering Innovation ..................................................................................... 127
A model for evaluation of generic competences in engineering: Application to the problem-solving competence at UPM ................................................................................................................................................. 135
A freshman project based computing engineering course: team work and innovation as a focus .......... 144

SESSION 2 - WEDNESDAY AFTERNOON ............................................................................................. 155

Topic: EER – Chair: Llewellyn Mann ......................................................................................................... 155

Strategic pathways to engineering education research: a top-down case study ....................................... 155
Hidden barriers to academic staff engaging in Engineering Education Research ..................................... 168
Analysis of Trends in United States National Science Foundation Funding for Engineering Education: 1990-2010 .......................................................................................................................................................... 175
A possible resistive electrical circuits learning pathway for engineering students .................................. 184

Topic: PBL – Chair: Milo Koretsky ........................................................................................................ 190

Evaluating tutor training for online PBL teamwork courses in first year engineering ......................... 190
Measuring the influence of Cooperative Learning and Project Based Learning on problem solving skill ... 199

Proceedings of Research in Engineering Education Symposium 2011
Madrid, 4th - 7th October 2011
### SESSION 3: WEDNESDAY AFTERNOON

#### Topic: Transition 1 – Chair: Robin Clark
- Conceptual Change in Precollege Engineering

#### Topic: Assessment 1 – Chair: Edith Gummer
- Does continuous evaluation drive us to mediocrity?

#### Topic: Curricula 1 – Chair: Amparo Camacho
- Informing engineering education for sustainable development using ad deliberative dynamic model for curriculum renewal

#### Topic: Knowledge & Leadership – Chair: Luis Manuel Cerda
- Building leadership capacity of engineering academics in a leadership vacuum constructed within a participatory group to engage a professional body
- “Knowledge Management” and Leadership in the Higher Education: A First Approach

#### Topic: Teaching & Learning – Chair: Duncan Fraser
- Design-based research as a methodology for investigating learning in the engineering education
- Investigating the nature of thing orientation
- Using Inquiry-Based Activities to Repair Student Misconceptions Related to Heat, Energy and Temperature

#### Topic: Learning strategies 2 – Chair: Cynthia J. Atman
- First steps in the discovery of patterns in the academic results of telecommunication engineering students in the subjects Analysis of Circuits and Mathematics

#### Topic: Teaching Practice – Chair: Anne Gardner
- Virtual 3D Support Contents Oriented to Interactive Self-Learning

#### Topic: Technology in Learning – Chair: Wendy Newstetter
- Computer Adaptive Testing and the Networked Model of Curriculum in an Engineering Education Learning System (MAPI-CAT): The Case of Fourier Analysis in Mexico

### SESSION 4: THURSDAY MORNING

#### Topic: Curricula 1 – Chair: Amparo Camacho
- Assessment as a tool for improving the education of engineers: experiences of international accreditation of the Universidad del Norte
- Quality assurance in engineering education in Russia
- Informing engineering education for sustainable development using ad deliberative dynamic model for curriculum renewal

#### Topic: Assessment 1 – Chair: Edith Gummer
- Tool for automatic production and management of written and web test exams
- Does continuous evaluation drive us to mediocrity?

#### Topic: Transition 1 – Chair: Robin Clark
- Engineering in an Elementary Setting: An Analysis of Context Maps
- Conceptual Change in Precollege Engineering
Forging Futures? Engineering in the Primary School Curriculum .................................................. 499

**Topic: Teaching & Learning 3 – Chair: Michael Prince** ................................................................. 507

New methodology on Applied Geology and Geology for Engineers education by using practical trip ........507

Competence Monitoring in Project Teams by using Web based portfolio management systems ...............516

Toward Lifelong Learning: Self-Regulation in Undergraduate Engineering Courses ..........................525

**SESSION 6: FRIDAY MORNING** ........................................................................................................ 671

**Topic: Curricula 2 – Chair: Dawn Williams** .................................................................................. 535

Studying Interdisciplinarity in Engineering Degree Courses: Conceptual and Methodological Issues ....535

Facilitating intellectual and personal skills development in engineering programmes ..........................543

A systematic consultation process to define graduate outcomes for engineering disciplines ...............552

The Development of Assessment Tools Using Phenomenography .................................................. 562

**Topic: Classroom experiments – Chair: Lyn Brodie** .................................................................. 571

Classroom experiments in the new degree of Materials Engineering at UPM .................................. 571

An architecture for virtual and remote laboratories to support distance learning ...............................579

Improving the Learning Process in Statistical Decision-Making Laboratory .....................................588

Low cost 3D Gesture based interface use for engineering lecturing .................................................. 595

**Topic: Ethics & Values – Chair: Cynthia Finelli** ......................................................................... 604

Assessing the ethical development of engineering undergraduates in the United States ......................604

Engineering Ethics: An Exploration of the State of the Art .................................................................612

Engineering as a Caring and Empathetic Discipline: Conceptualizations and Comparisons ...............622

**Topic: Transition 2 – Chair: Johannes Strobel** .......................................................................... 636

Development of learning environments to increase the understanding and interest in engineering and technology amongst Australian primary school students .................................................. 636

Starting young: Learning outcomes of a developmentally appropriate PreK engineering curriculum ........644

Measuring Pupils’ Perceptions of Engineers: Validation of the Draw-an-Engineer (DAET) Coding System with Interview Triangulation ...................................................................................... 652

Engineering, Learners, and Contexts (ELC): The Development of Pedagogical Engineering Knowledge by Elementary Teachers through Perceived Learning Difficulties and Contextual Constraints .................. 661

**SESSION 5: THURSDAY AFTERNOON** .......................................................................................... 535

**Topic: Curriculum 2 – Chair: Dawn Williams** ............................................................................ 535

Studying Interdisciplinarity in Engineering Degree Courses: Conceptual and Methodological Issues ....535

Facilitating intellectual and personal skills development in engineering programmes ..........................543

A systematic consultation process to define graduate outcomes for engineering disciplines ...............552

The Development of Assessment Tools Using Phenomenography .................................................. 562

**Topic: Classroom experiments – Chair: Lyn Brodie** .................................................................. 571

Classroom experiments in the new degree of Materials Engineering at UPM .................................. 571

An architecture for virtual and remote laboratories to support distance learning ...............................579

Improving the Learning Process in Statistical Decision-Making Laboratory .....................................588

Low cost 3D Gesture based interface use for engineering lecturing .................................................. 595

**Topic: Ethics & Values – Chair: Cynthia Finelli** ......................................................................... 604

Assessing the ethical development of engineering undergraduates in the United States ......................604

Engineering Ethics: An Exploration of the State of the Art .................................................................612

Engineering as a Caring and Empathetic Discipline: Conceptualizations and Comparisons ...............622

**Topic: Transition 2 – Chair: Johannes Strobel** .......................................................................... 636

Development of learning environments to increase the understanding and interest in engineering and technology amongst Australian primary school students .................................................. 636

Starting young: Learning outcomes of a developmentally appropriate PreK engineering curriculum ........644

Measuring Pupils’ Perceptions of Engineers: Validation of the Draw-an-Engineer (DAET) Coding System with Interview Triangulation ...................................................................................... 652

Engineering, Learners, and Contexts (ELC): The Development of Pedagogical Engineering Knowledge by Elementary Teachers through Perceived Learning Difficulties and Contextual Constraints .................. 661

**SESSION 6: FRIDAY MORNING** ........................................................................................................ 671

**Topic: Assessment 2 – Chair: Erik de Graaf** ................................................................................. 671

(Re-)Building an Assessment Paradigm: Individual Student Learning in Team-Based Subjects ............671

Considerations on the success rate in aeronautical engineering studies in Spain .................................678

Assessing individual performance within group design and group problem-solving learning environments 686

Understanding Feedback in an Authentic, Ill-Structured Project through Discourse Analysis: Interaction between Student and Instructor Objectives ......................................................... 700

**Topic: Tools 2 – Chair: James Pellegrino** ...................................................................................... 710

Quality of experience of online learning tools ...................................................................................... 710

Concept inventories as aids for instruction: a validity framework with examples of application ............719

Laboratory experiments: Case study of a virtual approach ................................................................... 728

An interactive platform for IA Games .................................................................................................. 736

**Topic: Teaching and Learning – Chair: Mario Letelier** ................................................................. 745

Learning speed evaluation of first year engineering students ............................................................... 745

Negotiation Games: Acquiring Skills by Playing ................................................................................ 754

Shifting conceptions of engineering design: Longitudinal and cross-sectional studies of undergraduate engineering majors ................................................................. 763

Microgenres: Critical “markers” that can facilitate teaching and assessing writing within and across schools and colleges of engineering ...................................................................................... 772

**Topic: Diversity – Chair: Lorraine Fleming** ............................................................................... 782

Observational research methods to explore intercultural competence in engineering ........................ 782

Does social capital matter? Impacts of social capital on African American male achievement .............790

Understanding engineering self-efficacy of students involved with a professional minority engineering society ................................................................................................................................. 798

Proceedings of Research in Engineering Education Symposium 2011
Madrid, 4th - 7th October 2011
Defining Diversity: Impacts on Students’ Engineering Identity ................................................................. 806

SESSION 7: FRIDAY MORNING .......................................................................................................................... 815

Topic: Educational Research – Chair: Maizam Alias ............................................................................. 815

The bigger picture - capturing value creation for an engineering school as it initiates engineering education research .................................................................................................................. 815

An Examination of Learning Strategy, Interest, Intention and Academic Performance: Case Studies of Australia and Malaysia ......................................................................................................... 824

Conference, reviews and conservations about improving engineering education .................................. 834

Topic: Teaching & Learning 5 – Chair: Gregory Light ........................................................................... 841

The answer to an exercise, the answer to a project: The teaching of creativity and project decision taking in the field of structures .................................................................................................. 841

Dealing With Ambiguity in Open-Ended Engineering Problems .............................................................. 850

Using case-based learning in undergraduate engineering courses ......................................................... 859

Topic: Tools 3 – Chair: Jonte Bernhard ...................................................................................................... 865

Disassemble/Analyse/Assemble (DAA) activities: Learning Engineering through Artefact Interactions ....... 865

The transferability of the PSVT-R and the MCT for Measuring and Predicting Student 3D CAD Modelling Abilities ........................................................................................................................................ 874

Novel Hybrid Training Tool Based on Experimental Projects in Electronic Engineering Education ........... 883

Topic: Miscellaneous – Chair: James Trevelyan ................................................................................... 890

Balancing the Budget: Aspects of Economics in Engineering Education .................................................. 890

Bringing Engineering Education to Life – An Empirical Approach ............................................................ 900

Threshold capabilities: an emerging methodology to locate curricula thresholds .................................... 907

PAPERS WHICH ARE NOT PRESENTED IN REES 2011 ........................................................................ 916

Adapting Engineering Education for a Mindmap-Based Digital Textbook: To reduce the skill gap between what the industry demands and what academia delivers .............................................................................. 916

Student behavior trends in an engineering program .................................................................................. 925

Design of Competences-based Educational Programs for engineering education understanding curriculum as a process ........................................................................................................................................ 935

Educational Experience of Adaptation of a degree in Electronic Engineering from the ECTS standpoint within the European Higher Education Area Framework ................................................................................. 944

LIST OF REVIEWERS ................................................................................................................................ 952

ABSTRACT REVIEWERS .......................................................................................................................... 952

PAPER REVIEWERS ............................................................................................................................... 955
