2013 IEEE Green Technologies Conference

(GreenTech 2013)

Denver, Colorado, USA
4 – 5 April 2013
2013 IEEE Green Technologies
Conference
GreenTech 2013
Table of Contents

Message from General Chair.....................................................................................................................xii
Message from Technical Program Chairs..................................................................................................xiii
Organizing Committee....................................................................................................................................xiv
Program Committee......................................................................................................................................xv
Reviewers..........................................................................................................................................................xvi
Workshops.....................................................................................................................................................xviii
Keynotes............................................................................................................................................................xxi
Sponsors............................................................................................................................................................xxvi

S1: Transportation - Session A
Charging EVs Efficiently NOW While Waiting for the Smart Grid .................................................................1
  Robert (Bob) Bruninga and Jill A.T. Sorensen
A Linear Programming Methodology to Quantify the Impact of PHEVs with V2G Capabilities on Distribution Systems .............................................................................................................8
  J. Giráldez, R. Roche, S. Suryanarayanan, and D. Zimmerle
Biogas Generation from a 2-Phase Sludge Treatment System ....................................................................16
  Taranveer Singh Mann, Terence Goh, and William Phay
Micro Behavior Information Decision Research in An ABM Traffic and Energy Model .................................22
  Yining Qin, Gansemer Jim, Liang Min, and Yiming Yao

S2: Smart Grid - Session A
Accurate Component Model Based Optimal Control for Energy Storage Systems in Households with Photovoltaic Modules ..................................................................................................................28
  Yanzhi Wang, Xue Lin, and Massoud Pedram
A Comfort Based Game Theoretic Approach for Load Management in the Smart Grid ..............................35
  Naouar Yaagoubi and Hussein T. Mouftah
Case Study: Small-Scale Hybrid Integrated Renewable Energy System
(HI-RES): Emergency Mobile Backup Power Generation Station .................................................................42
  Jeffrey A. Weber, David Wenzhong-Gao, and John Zhiqiang Zhai

A Smart Recording Power Analyzer Prototype Using LabVIEW and Low-Cost Data Acquisition (DAQ) in Being a Smart Renewable Monitoring System ..........................................................49
  Chow Chompoo-Inwai and Jade Mungkomassawakul

Smart Meters in Smart Grid: An Overview ..................................................................................................57
  Jixuan Zheng, David Wenzhong Gao, and Li Lin

Communication Architectures for Distribution Networks within the Smart Grid Initiative ..............................................65
  Monther A. Hammoudeh, Fernando Mancilla-David, Jeff D. Selman, and P. Papantoni-Kazakos

S3: PV Generation - Session A
Novel Use of Graphical System Design Tools and SPICE to Exploring Efficiency in Power Simulation ..........................................................71
  Patrick Noonan and Mahmoud Wahby

Feasibility Study of Photovoltaic Panels in Military Temporary Housing Structures ........................................................................................................78
  Brian Severson and Aaron St. Leger

Scheduled Operation of Heat Pump Water Heater for Voltage Control in Distribution System with Large Penetration of PV Systems ...................................................................................85
  A.L.M. Mufaris and J. Baba

Model Validation of Photovoltaic Systems ..................................................................................................93
  Hongmei Tian, Fernando Mancilla-David, Eduard Muljadi, Thomas Stoffel, and Afshin Andreas

Dynamic Model Validation of PV Inverters under Short-Circuit Conditions ......................................................98
  E. Muljadi, M. Singh, R. Bravo, and V. Gevorgian

Closed-Forms Solution for Simplified PV Modeling and Voltage Evaluation Including Irradiation and Temperature Dependence .............................................................................................105
  Antonio Ginart, Richard Riley, Bryan Hardman, and Michael Ernst

S4: Wind Power - Session A
Modeling DFIG Using General Vector Representation in the Presence of Harmonics .................................................113
  Ziqiao Liu, Ahmed Abu-Hajar, and David Wenzhong Gao

An Overview of the Current State of Wind Energy Technology Development in the US ..............................................120
  Alshehri Abdullah and Afef Fekih
A Practical Sizing Method of Energy Storage System Considering the Wind Uncertainty for Wind Turbine Generation Systems ................................................................. 127
  
  David Wenzhong Gao, Hamed Babazadeh, and Li Lin

Adaptive Flow Control of Wind Turbine Blade Using Microtabs with Unsteady Aerodynamic Loads ........................................................................................................ 134
  
  Nailu Li and Mark J. Balas

Advanced Hydraulic Wind Energy ........................................................................ 140
  
  Jack A. Jones, Allan Bruce, and Adrienne S. Lam

Identifying Wind and Solar Ramping Events .................................................... 147
  
  Anthony Florita, Bri-Mathias Hodge, and Kirsten E. Orwig

S5: Green IT - Session A

Analysis of the Impacts of Distribution Connected PV Using High-Speed Datasets ............................................................................................................................. 153
  
  Jason Bank and Barry Mather

Impact of Correlated Distributed Generation on Information Aggregation in Smart Grid ............................................................................................................. 160
  
  S.M. Shafiul Alam, Balasubramaniam Natarajan, and Anil Pahwa

Service Level Agreement-Based Joint Application Environment Assignment and Resource Allocation in Cloud Computing Systems ........................................ 167
  
  Yanzhi Wang, Shuang Chen, and Massoud Pedram

Energy-Aware Page Migration in PCM-DRAM Hybrid Memory .................... 175
  
  Donghong Wu and Minyi Guo

Bad Data Detection and Identification Using Neural Network-Based Reduced Model State Estimator ......................................................................................... 183
  
  Yunhui Wu, Amamihe Onwuachumba, and Mohamad Musavi

Improving Latency in Traffic Prediction Based Energy-Aware Routers ............ 190
  
  Sou Koyano, Shingo Ata, Hisashi Iwamoto, Yuji Yano, Yasuto Kuroda, Kazunari Inoue, and Ikuo Oka

S6: PV Solar Generation - Session B

A New Class of Light-Traps for Nano-enhanced Photovoltaic Conversion ............ 198
  
  Scott Shepard

Scaling Limits of Rectangular and Trapezoidal Channel FinFETs ....................... 204
  
  Javaneh Mohseni and James D. Meindl

Stirling Dish Generator Using a Focal Point Internal to the Dish ...................... 211
  
  Darick W. Laselle, Robert Liechty, Hassan Alzamzam, Robert Foster, and Jasmin Dzabic
Investigation of Thermal Feedback Design for Improved Load-Following Capability of Thorium Molten Salt Reactors

Andrew M. Dodson and Roy A. McCann

Designing and Constructing an Alternative Reduced-Cost Heliostat Drive System

Niall O. Norton-Cormier, Harry Hupman, Tim Rushenberg, Nicholas Alvarez, Andrew Smith, David Patterson, and David Grow

S7: Power Systems - Session A

Type-2 Wind Turbine with Additional Sub-synchronous Resonance Damping

Mikel de Prada, José Luis Dominguez-García, Fernando Mancilla-David, Eduard Muljadi, Mohit Singh, Oriol Gomis-Bellmunt, and Andreas Sumper

Improving the Power Quality of Traction Power Systems with a Single-Feeding Wire

Qing-Chang Zhong, Wen-Long Ming, and Miroslav Krstic

An Optimal Load-Frequency Control Method for Inverter-Based Renewable Energy Transmission

Kirsch Mackey and Roy A. McCann

Connectivity and Bidirectional Energy Transfer in DC Microgrid Featuring Different Voltage Characteristics

Mustafa Farhadi, Ahmed Mohamed, and Osama Mohammed

Micro Grid Stability Improvements by Employing Storage

S. Lamichhane, H. Nazaripouya, and S. Mehraeen

Operation and Control Zones for Future Complex Power Systems

Chiara Piacentini, James E. King, and Philip C. Taylor

S8: Wind Power - Session B

Hybrid Electro-mechanical Simulation Tool for Wind Turbine Generators

M. Singh, E. Muljadi, and J. Jonkman

A New Multi-level Inverter with FACTS Capabilities for Wind Applications

Pedram Sotoodeh and Ruth Douglas Miller

A Case Study on the Effects of Predicted Wind Farm Power Outputs on Unscheduled Flows in Transmission Networks

Manish Mohanpurkar and Siddharth Suryanarayanan
S9: Green IT - Session B
Hybrid Storage System Power Optimization .................................................................285
  Muhittin Yilmaz, Pratyush Valluri, and Sasikanth Pagadrai
Automatic and Cooperative Sleep Control Strategies for Power-Saving
in Radio-on-Demand WLANs ..........................................................................................293
  Toshiyasu Tanaka, Kenichi Abe, Stefan Aust, Tetsuya Ito, Hiroyuki Yomo,
  and Shiro Sakata
A Study on Cyber Security of Smart Grid on Public Networks ........................................301
  Xiao Liang, Kunlun Gao, Xiaokun Zheng, and Ting Zhao

S10: Smart Grid - Session B
A Profile-Based Identification of Standby and Useless Electricity Consumption
in Buildings ......................................................................................................................309
  Rien De Koster, Juan Van Roy, and Johan Driesen
Ad-Hoc Self-Organized Microgrid for Rural Electrification and Post-disaster
Response .........................................................................................................................315
  Amos Brocco
Voltage Impacts of DG on Distribution Grid with Voltage Regulators and SVCs ..................322
  M. Vaziri, M. Afzal, M. Zarghami, A. Yazdani, S. Vadhva, and F. Tavatli
Data Analysis and Visualization for Electric Microgrids: A Case Study on
the FortZED RDSI Microgrid ..........................................................................................330
  Mayank Panwar, Daniel Zimmerle, and Siddharth Suryanarayanan
A Wireless Mesh Architecture for the Advanced Metering Infrastructure
in Residential Smart Grids ..............................................................................................338
  Mohamed Riduan Abid, Ahmed Khalil, Hamid Harroudi, Rachid Lghoul,
  Mohamed Boulmalf, and Driss Benhaddou
Applications of Battery Storage to Improve Performance of Distribution
Systems .............................................................................................................................345
  M. Zarghami, M.Y. Vaziri, A. Rahimi, and S. Vadhva

S11: Energy Efficiency - Session A
An Examination of Multiple MicroGeneration Technologies Used within
an Experimental Home: A Tire-bale Home Leverages Green Technologies
for Energy Independence ..................................................................................................351
  Jon Hagar and Laura Hagar
Current Technological Advances in Fuel Spray Imaging ..................................................356
  Megan Paciaroni and Mark Linne
S12: Power Systems - Session B

A Single-Phase to Three-Phase Power Conversion System with Reduced Switches and Improved Output Voltages ................................................................. 386
   Qing-Chang Zhong, Wen-Long Ming, and Miroslav Krstic

   Blake Lundstrom, Mariko Shirazi, Michael Coddington, and Benjamin Kroposki

Connection of an Offshore Wind Park to HVDC Converter Platform without Using Offshore AC Collector Platforms ............................................................... 400
   Haseeb Ahmad, Steven Coppens, and Bahri Uzunoglu

Reduced Model for Power System State Estimation Using Artificial Neural Networks ......................................................................................................................... 407
   Amamihe Onwuachumba, Yinhui Wu, and Mohamad Musavi

S13: Energy Market - Session A

Using Electricity Market Analytics to Reduce Cost and Environmental Impact .......................................................... 414
   Conor Kelly, Antonio Ruzzelli, and Eleni Mangina

Dynamic Pricing for Distributed Generation in Smart Grid ................................................................................................. 422
   Chong Huang and Saswati Sarkar

Estimating Energy Costs Using a Markov Model for a Midwest Off-Grid Residence ......................................................................................................................... 430
   Robert S. Weissbach and Joel R. King

Short-Term Load Forecast Error Distributions and Implications for Renewable Integration Studies .................................................. 435
   Bri-Mathias Hodge, Debra Lew, and Michael Milligan
A Study of the Impact of Load Forecasting Errors on Trading and Balancing in a Microgrid ..........................................................443
    Slobodanka Dana Tomic

Unscheduled Flow in Deregulated Electricity Markets: Bridging the Gap between the Western Electric Power Industry and Academia .........................................................451
    Andre Q. Dozier, Siddharth Suryanarayanan, Joseph P. Liberatore, and Matthew C. Veghte

Poster Session

Power Grids in India: A Paradigm Shift from Dumb to Smart Grids ..........................................................459
    Bhavesh Kumar Chauhan and Swati Takiyar

Simulation Study for the Effect of the Storage Design on the Performance of a Large Solar Hot Water System ..........................................................467
    Ru Yang and Nai-Shan Shue

Impact of Distributed Generation on Voltage Profile of Radial Power Systems ..............................................473
    M.O. Alruwaili, M.Y. Vaziri, S. Vadhva, and S. Vaziri

Impact of Wind Generation Variability on Voltage Profile of Radial Power Systems ........................................481
    M.O. Alruwaili, M.Y. Vaziri, S. Vadhva, and S. Vaziri

Author Index ..................................................................................................................................................489
