2013 IEEE 43rd International Symposium on Multiple-Valued Logic

(ISMVL 2013)

Toyama, Japan
22 – 24 May 2013
Message from Symposium Chair..............................................................................................................xi
Message from Program Chair...................................................................................................................xii
Symposium Committee.............................................................................................................................xiii
Reviewers ...................................................................................................................................................xv

Invited Address I
Computational Medical and Health Care Technology .................................................................1
   Yutaka Hata and Hiroshi Nakajima

Session 1A: Medical and Health Care Engineering
Systems Health Care: Health Management Technology ...............................................................6
   Hiroshi Nakajima, Toshikazu Shiga, and Yutaka Hata
Wearable Human Activity Recognition by Electrocardiograph and Accelerometer ......................12
   Tatsuhiro Fujimoto, Hiroshi Nakajima, Naoki Tsuchiya, Hideya Marukawa, Kei Kuramoto, Syoji Kobashi, and Yutaka Hata
Gaze Estimation Using Electrooculogram Signals and Its Mathematical Modeling ......................18
   Mingmin Yan, Hiroki Tamura, and Koichi Tanno
Fuzzy Damage Extraction Method for Ultrasonic Nondestructive Testing Images ......................23
   Koki Tsukuda, Tadahito Egawa, Kazuhiro Taniguchi, Kei Kuramoto, Syoji Kobashi, and Yutaka Hata
Session 1B: Reversible Circuits

Fault Ordering for Automatic Test Pattern Generation of Reversible Circuits ..............................................29
  Robert Wille, Hongyan Zhang, and Rolf Drechsler

Synthesis of Reversible Circuits Based on Products of Exclusive OR Sums .........................................................35
  Ben Schaeffer, Linh Tran, Addison Gronquist, Marek Perkowski, and Pawel Kerntopf

Multiple-Valued Reversible Benchmarks and Extensible Quantum
Specification (XQS) Format ........................................................................................................................................41
  Maher Hawash, Martin Lukac, Michitaka Kameyama, and Marek Perkowski

Analysis and Improvement of Transformation-Based Reversible Logic Synthesis .................................................47
  Chander Chandak, Anupam Chattopadhyay, Soumajit Majumder, and Subhamoy Maitra

Session 2A: Medical and Wellness Applications

A Fuzzy Human Detection for Security System Using Infrared Laser Camera .....................................................53
  Takahiro Takeda, Kei Kuramoto, Syoji Kobashi, and Yutaka Hata

Mining Multi Human Locations Using Thermopile Array Sensors .....................................................................59
  Masato Kuki, Hiroshi Nakajima, Naoki Tsuchiya, Kei Kuramoto, Syoji Kobashi, and Yutaka Hata

On Selection of Intraocular Power Formula Using Support Vector Machines and Genetic Algorithm ..................65
  Naotake Kamiura, Tomoya Fukuda, Ayumu Saitoh, Teijiro Isokawa, Nobuyuki Matsui, and Hitoshi Tabuchi

A Broken Line Classification Method of Mathematical Graphs for Automating Translation into Scalable Vector Graphic .................................................................................................................................71
  Noboru Takagi and Jianjun Chen

On Synthesis and Verification from Event Diagrams in a Robot Theatre Application .............................................77
  Marek Perkowski, Aditya Bhutada, Martin Lukac, and Mathias Sunardi

Session 2B: Logic Design/Switching Theory I

Remarks on Applications of Shapes of Decision Diagrams in Classification of Multiple-Valued Logic Functions .................................................................................................................................84
  Stanislav Stanković, Radomir S. Stanković, and Jaakko Astola

A Machine to Evaluate Decomposed Multi-Terminal Multi-Valued Decision Diagrams for Characteristic Functions ........................................................................................................................90
  Hiroki Nakahara, Tsutomu Sasao, and Munehiro Matsuura
An Application of Autocorrelation Functions to Find Linear Decompositions for Incompletely Specified Index Generation Functions ...........................................96
Tsutomu Sasao

A Transfer Function Model for Ternary Switching Logic Circuits ..............................................................103
Mitchell A. Thornton

Spectral Response of Ternary Logic Netlists ............................................................................................109
Mitchell A. Thornton and Theodore W. Manikas

Session 3A: Clone Theory I

A Study on Essentially Minimal Clones ....................................................................................................117
Hajime Machida and Ivo G. Rosenberg

A Solution to a Problem of D. Lau: Complete Classification of Intervals in the Lattice of Partial Boolean Clones ........................................................................................................123
Miguel Couceiro, Lucien Haddad, Karsten Schölzel, and Tamás Waldhauser

On the Clones Containing a Near-Unanimity Function ........................................................................129
Dmitriy Zhuk and Stanislav Moiseev

Intersections with Stupecki Partial Clones on a Finite Set ........................................................................135
Lucien Haddad and Karsten Schölzel

Not Finitely Definable Partial Clones on a Finite Set ..............................................................................141
Boris A. Romov

Session 3B: Circuits I

Design and Evaluation of a Differential Switching Gate for Low-Voltage Applications ..................................................................................................................146
Masanori Natsui, Kiyohiro Kashiuchi, and Takahiro Hanyu

A Successive Approximation A/D Converter Using Generalized Non-Binary Algorithm ...............................152
Yuki Kurisu, Tatsuya Sasaki, and Takao Waho

A Graph-Based Approach to Designing Parallel Multipliers over Galois Fields Based on Normal Basis Representations .................................................................................................158
Kotaro Okamoto, Naofumi Homma, and Takafumi Aoki

Low-Power Multiple-Valued Source-Coupled Logic Circuits Using Dual-Supply Voltages for a Reconfigurable VLSI ........................................................................................................164
Xu Bai and Michitaka Kameyama

Dramatically Low-Transistor-Count High-Speed Ternary Adders .............................................................170
Reza Faghih Mirzaee, Mohammad Hossein Moalyeri, Mojtaba Maleknejad, Keivan Navi, and Omid Hashemipour
Invited Address II

The Complexity of Łukasiewicz Logic ................................................................. 176

Martin Goldstern

Session 4A: Clone Theory II

On Hyper Co-Clones ........................................................................................... 182

Jelena Ćolić, Hajime Machida, and Jovanka Pantović

Clones of Partial Cofunctions ........................................................................... 186

Sebastian Kerkhoff and Friedrich Martin Schneider

Boolean Max-Co-Clones .................................................................................... 192

Andrei A. Bulatov

Session 4B: Algebra and Logic I

Four Decades of Multi-Valued Logic: Lists of Highly Cited Papers ...................... 198

Tsutomu Sasao

Chaotic Time Series Prediction Using Neuro-Fuzzy Systems
with Cluster-Based Tribes Optimization Algorithm ............................................. 203

Cheng-Hung Chen, Rong-Zuo Jhang, and Yen-Yun Liao

Join Operations on Commutative BCK-Algebras with Condition (S) .................... 209

Mayuka F. Kawaguchi, Kouta Minami, and Michiro Kondo

Invited Address III

Highly Reliable Non-Volatile Logic Circuit Technology and Its Application ............ 212

Hiromitsu Kimura, Zhiyong Zhong, Yuta Mizuochi, Norihiro Kinouchi,
Yoshinobu Ichida, and Yoshikazu Fujimori

Session 5A: Algebra and Logic II

Tense Operators and Dynamic De Morgan Algebras ............................................ 219

Ivan Chajda and Jan Paseka

On the Combinatorics of Tolerance Relations .................................................. 225

Dan A. Simovici

On Natural Eight-Valued Reasoning ................................................................. 231

Norihiro Kamide

Embedding-Based Methods for Trilattice Logic ............................................... 237

Norihiro Kamide

On the Semigroup of Equational Classes of Finite Functions ............................ 243

Jorge Almeida, Miguel Couceiro, and Tamás Waldhauser
Session 5B: Circuits II

Comparing Performance of a Multiple-Valued Time-Based Serial Data Link with Other Serial Links .................................................................248

Mostafa Rashdan and James W. Haslett

Lowering Error Floors in Stochastic Decoding of LDPC Codes Based on Wire-Delay Dependent Asynchronous Updating ........................................254

Naoya Onizawa, Warren J. Gross, Takahiro Hanyu, and Vincent C. Gaudet

Expandable MVL Inverter Compatible with Standard CMOS Process and Its Application to MVL Hysteresis Comparator ...........................................260

Arif Abdul Mannan, Koichi Tanno, Hiroki Tamura, Takako Toyama, and Agung Darmawansyah

Accurate and High-Speed Asynchronous Network-on-Chip Simulation Using Physical Wire-Delay Information ..............................................................266

Takahiro Hanyu, Yuma Watanabe, and Atsushi Matsumoto

An Area-Efficient Multiple-Valued Reconfigurable VLSI Architecture Using an X-Net ..................................................................................272

Xu Bai and Michitaka Kameyama

Session 6A: Logic Design/Switching Theory II

Noise-Tolerant Model of a Ternary Inverter Based on Markov Random Field .........................................................................................278

Golam Tangim, Svetlana N. Yanushkevich, Seiya Kasai, and Vlad P. Shmerko

Minimization of the Number of Edges in an EVMDD by Variable Grouping for Fast Analysis of Multi-State Systems ........................................284

Shinobu Nagayama, Tsutomu Sasao, and Jon T. Butler

Secure Key Storage Using State Machines ........................................................................................................................................290

Nan Li, Shohreh Sharif Mansouri, and Elena Dubrova

The Impact of Address Arithmetic on the GPU Implementation of Fast Algorithms for the Vilenkin-Chrestenson Transform ........................................296

Dušan B. Gajić and Radomir S. Stanković

Solution of the Last Open Four-Colored Rectangle-Free Grid: An Extremely Complex Multiple-Valued Problem ...................................................302

Bernd Steinbach and Christian Posthoff

Ternary Logic Network Justification Using Transfer Matrices ..........................................................................................................................310

Mitchell A. Thornton and Jennifer L. Dworak
Session 6B: Algebra and Reversible Circuits

Debugging of Reversible Circuits Using πDDs ......................................................316
  Laura Tague, Mathias Soeken, Shin-ichi Minato, and Rolf Drechsler

Analysis of Reversible and Quantum Finite State Machines Using Homing,
Synchronizing and Distinguishing Input Sequences ...........................................322
  Martin Lukac, Michitaka Kameyama, Marek Perkowski, and Pawel Kerntopf

Exact Template Matching Using Boolean Satisfiability ........................................328
  Nabila Abdessaied, Mathias Soeken, Robert Wille, and Rolf Drechsler

Synthesis of Balanced Ternary Reversible Logic Circuit .......................................334
  Bikromaditya Mondal, Pradyut Sarkar, Pranay Kumar Saha,
  and Susanta Chakraborty

Contribution to the Study of Multiple-Valued Bent Functions ...............................340
  Claudio Moraga, Milena Stanković, Radomir S. Stanković, and Suzana Stojković

Alternative Proof of Mulholland’s Theorem and New Solutions to Mulholland
Inequality ...........................................................................................................346
  Milan Petrík, Mirko Navara, and Peter Sarkoci

Author Index ........................................................................................................352
