2013 Learning and Teaching in Computing and Engineering

(LaTiCE 2013)

Macau
21 – 24 March 2013
2013 Learning and Teaching in Computing and Engineering
LaTiCE 2013
Table of Contents

Message from General Chairs ................................................................................................................... ix
Message from Publication Chair ...........................................................................................................x
Organizing Committee ................................................................................................................................ xi
Programme Committee .......................................................................................................................... xii
Reviewers .................................................................................................................................................. xiii

Research Papers
CS Students' Readiness and Perceptions of Using Mobile Technology during Lectures .......................................................... 1
 Wafaa Alsaggaf, Margaret Hamilton, and James Harland
Object Interaction Competence Model v. 2.0 .......................................................................................... 9
 Jens Bennedsen and Carsten Schulte
Common Areas for Improvement in Physical Science Units That Have Critically Low Student Satisfaction .............................................. 17
 Angela Carbone and Jason Ceddia
Novices' Debugging Behaviors in VB Programming ............................................................................. 25
 Mei-Wen Chen, Cheng-Chih Wu, and Yu-Tzu Lin
Neo-piagetian Forms of Reasoning in Software Development Process Construction ................................................................. 31
 Katrina Falkner, Rebecca Vivian, and Nickolas J.G. Falkner
Computer Science Education: The First Threshold Concept ........................................................................... 39
 Nickolas J.G. Falkner, Rebecca Jade Vivian, and Katrina Elizabeth Falkner
Empirical Study on the Effect of Achievement Badges in TRAKLA2 Online Learning Environment ................................................................................. 47
 Lasse Hakulinen, Tapio Auvinen, and Ari Korhonen
How Do Students Solve Parsons Programming Problems? – Execution-Based vs. Line-Based Feedback ........................................................................... 55
 Juha Helminen, Petri Ihantola, Ville Karavirta, and Satu Alaoutinen
Misconceptions in Visual Algorithm Simulation Revisited: On UI's Effect on Student Performance, Attitudes and Misconceptions ..........................................................62
   Ville Karavirta, Ari Korhonen, and Otto Seppälä

Facebook as an Informal Learning Space Channel: The São José, Macao Cases ..........................................................................................................................70
   Su Long Kio and Joao Negreiros

Java Assist Learning System for Assisted Learning on Facebook ..........................................................77
   Chien-Hung Lai, Wei-Ching Lin, Bin-Shyan Jong, and Yen-Teh Hsia

Facebook versus Blackboard for Supporting the Learning of Programming in a Fully Online Course: The Changing Face of Computing Education ........................................83
   Mercy Maleko, Dip Nandi, Margaret Hamilton, Daryl D'Souza, and James Harland

Moodle versus eClass for Macau Schools ..................................................................................................90
   A. Munoyenda and R. Whitfield

Educating Computer Programming Students about Plagiarism through Use of a Code Similarity Detection Tool .................................................................................98
   Tri Le, Angela Carbone, Judy Sheard, Margot Schuhmacher, Michael de Raath, and Chris Johnson

What is Feedback? Connecting Student Perceptions to Assessment Practices ......................................106
   Arnold Pears, James Harland, Margaret Hamilton, and Roger Hadgraft

Engagement in Computer Science and IT – What! A Matter of Identity? ...........................................114
   Anne-Kathrin Peters and Arnold Pears

Study Habits of CS 1 Students: What Do They Say They Do? ..............................................................122
   Judy Sheard, Angela Carbone, Donald Chinn, and Mikko-Jussi Laakso

Soloway's Rainfall Problem Has Become Harder .................................................................................130
   Simon

Automatic Grading of Free-Form Diagrams with Label Hypernymy .......................................................136
   Neil Smith, Pete Thomas, and Kevin Waugh

A Surface Approach to Learning Rewards First-Year Engineering Students .........................................143
   Maria Svedin, Olle Bälter, Max Scheja, and Kerstin Pettersson

A Reflection on the First Run of the Runestone Project at Tongji University: Observations on Cross Cultural Distributed Teams vs Face to Face Teams .................................148
   Minjuan Janet Tong and Tony Clear

Building Consensus: Students' Cognitive and Metacognitive Behaviours during Wiki Construction ..................................................................................................................154
   Rebecca Vivian, Katrina Falkner, and Nickolas Falkner
Practice Papers

Using Enterprise Level Software for a Large Scale Compulsory Course in an Information Systems Undergraduate Program – An Example from Singapore ..........................................................162
  Ilse Baumgartner

Teaching Algorithmic Thinking Using Haptic Models for Visually Impaired Students .................................................................167
  Dino Capovilla, Johannes Krugel, and Peter Hubwieser

Case-Based Instruction of Digital Integrated Circuit Design Courses for Non-major Undergraduates ...........................................172
  Shih-Lun Chen, Yu-Kuen Lai, Wei-Chih Hu, and Wen-Yaw Chung

A Practice for Providing Additional Support in CS1 ..................................................178
  Simo Haatainen, Anti-Jussi Lakanen, Ville Isomöttönen, and Vesa Lappalainen

Deployment of Capstone Projects in Software Engineering Education at Duy Tan University as Part of a University-Wide Project-Based Learning Effort .............................................184
  Duc Man Nguyen, Tien Vu Truong, and Nguyen Bao Le

Encouraging Students through Reflective Dialogues: A Teaching Concept Based on DialogueMaps and Its Evaluation ..........................................................192
  Marcel Morisse, Paul Drews, Detlef Rick, and Arno Sagawe

  Su White and Hugh C. Davis

Work-in-Progress Papers

Computer Science Students’ Perception of Computer Network Security ..........................................................204
  Volkan Cambazoglu and Neena Thota

Analysing the Enacted Object of Learning in Lab Assignments in Programming Education ..........................................................208
  Anna Eckerdal and Michael Thuné

The Learning Outcomes of the Exam Question in the Input/Output Topic in Computer Architecture ..................................................212
  Edurne Larraza-Mendiluze and Nestor Garay-Vitoria

Instructor Scaffolding and Students’ Critical Thinking through Asynchronous Online Discussion Forum ..................................................216
  Siti Nazleen Abdul Rabu, Baharuddin Aris, and Zaidatun Tasir
Changing Computer Programming Education: The Dinosaur That Survived in School: An Explorative Study about Educational Issues Based on Teachers’ Beliefs and Curriculum Development in Secondary School .................................................................220

Lennart Rolandsson

Using Growing Pet Game in Facebook to Enhance Students’ Learning Motivation: In Operating System Course .........................................................................................................................................224

Ye-Xuan She, Ming-Hong Lin, Bin-Shyan Jong, and Yen-Teh Hsia

Work-in-Progress: Learning to Program in a Connected World ..............................................................................................................................................................................229

Jian Shi and Su White

Posters

Bring History of Computing into High School CS Curriculum: Teachers’ Perspectives .................................................................................................................................233

Yi Fen Chen and Cheng-Chih Wu

Learning Beginning Programming with Cloud-Based Cloze Programming Practices ..............................................................................................................................................................................................................................................................................................................235

Yu-Jen Lo, Chiung-Chen Lin, Lily Hou, Jane-Dong Wu, Yu-Chi Feng, and Greg C. Lee

NIME Education at the School of Arts of the Portuguese Catholic University/CITAR ..............................................................................................................................................................................................................................................................................................................237

Luis Gustavo Martins and Álvaro Barbosa

The Constructivist Beliefs of High School Computer Teachers ..............................................................................................................................................................................................................................................................................................................239

Ya-Hsun Tsai and Cheng-Chih Wu

Author Index ..............................................................................................................................................................................................................................................................................................................241
