2013 7th International Conference on Software Security and Reliability

SERE 2013

Table of Contents

Message from the Steering Committee Chairs ....................................................................................................................viii
Message from the General Chair ...........................................................................................................................................ix
Message from the Program Chair ............................................................................................................................................x
SERE 2013 Steering Committee ...............................................................................................................................................xi
SERE 2013 Organizing Committee ........................................................................................................................................xiv
SERE 2013 Program Committee ...........................................................................................................................................xv
Keynote Abstracts ................................................................................................................................................................................xvii

Session 1A: Tutorial

Programming on Android: Best Practices for Security and Reliability ......................................................................................1

Angelos Stavrou

Session 1B: Software and System Reliability

Software Reliability Modeling and Evaluation under Incomplete Knowledge on Fault Distribution ..................................................3

Toshio Kaneishi and Tadashi Dohi

Bayesian Network Based Software Reliability Prediction by Dynamic Simulation .........................................................................13

Shunkun Yang, Minyan Lu, and Lin Ge

Shortening the Cycle of Software Reliability Testing with Fuzzy Discrimination ............................................................................21

Jun Ai, Feng Zheng, and Jingwei Shang

An Empirical Study on Data Retrievability in Decentralized Erasure Code Based Distributed Storage Systems ........................................30

Hsiao-Ying Lin, Li-Ping Tung, and Bao-Shuh P. Lin

Session 2A: Tutorial (continued)
Session 2B: Mobile Policy Enforcement and Access Control

Context-Aware Policy Enforcement for Android ..........................................................................................................................40
Christian Jung, Denis Feth, and Christian Seise

Quantitatively Measure Access Control Mechanisms across Different Operating Systems .................................................................50
Liang Cheng, Yang Zhang, and Zhihui Han

Light-Weight CSRF Protection by Labeling User-Created Contents ...............................................................................................60
Yin-Chang Sung, Michael Cheng Yi Cho, Chi-Wei Wang, Chia-Wei Hsu,
and Shihpyng Winston Shieh

Session 3A: Malware Detection and Performance Modeling

Multi-channel Change-Point Malware Detection ..............................................................................................................................70
Raymond Canzanese, Moshe Kam, and Spiros Mancoridis

Divergence Detector: A Fine-Grained Approach to Detecting VM-Awareness Malware ..................................................................80
Chia-Wei Hsu, Fan-Syunshih, Chi-Weiwang, and Shihpyng Winston Shieh

A Performance Mapping Model for Physical-to-Virtual Migration ..................................................................................................90
Borting Chen, Chien-Yu Lai, and Yu-Lun Huang

Session 4A: Evaluation and Measurement

Method for Evaluating k-Means Clustering for Increased Reliability in Cognitive Radio Networks .................................................................99
Ryan K. McLean, Mark D. Silvius, and Kenneth M. Hopkinson

Mining Sequential Patterns of Predicates for Fault Localization and Understanding ........................................................................109
Zebao Gao, Zhenyu Chen, Yang Feng, and Bin Luo

Session 5A: Survivability and Malware Monitoring

MJBlocker: A Lightweight and Run-Time Malicious JavaScript Extensions Blocker ..................................................................................119
Pingjian Wang, Lei Wang, Ji Xiang, Peng Liu, Neng Gao, and Jiwu Jing

Improving Service Diagnosis through Increased Monitoring Granularity .........................................................................................129
Cuiting Chen, Hans-Gerhard Grass, and Andy Zaidman

Moving and Relocating: A Logical Framework of Service Migration for Software System Survivability ........................................................................................................139
Yanjun Zuo

Session 6A: Security Threat and Network Availability

Exploiting Neighborhood Similarity for Virtual Machine Migration over Wide-Area Network .................................................................149
Hsu-Fang Lai, Yu-Sung Wu, and Yu-Jui Cheng

Toward Zero-Day Attack Identification Using Linear Data Transformation Techniques ..................................................................159
Ahmed Aleroud and George Karabatis

Vulnerability-Based Backdoors: Threats from Two-step Trojans ......................................................................................................169
Kai Chen, Yingjun Zhang, and Yifeng Lian
Maximizing the Availability of Replicated Services in Widely Distributed Systems Considering Network Availability .................................................................178
   Manghui Tu, Liangliang Xiao, and Dianxiang Xu

**Session 6B: Web Security**

Confeagle: Automated Analysis of Configuration Vulnerabilities in Web Applications .................................................................188
   Birhanu Eshete, Adolfo Villafiorita, Komminist Weldemariam, and Mohammad Zulkernine

A Model-Based Detection of Vulnerable and Malicious Browser Extensions .................................................................198
   Hossain Shahriar, Komminist Weldemariam, Thibaud Lutellier, and Mohammad Zulkernine

CRAXweb: Automatic Web Application Testing and Attack Generation .................................................................208
   Shih-Kun Huang, Han-Lin Lu, Wai-Meng Leong, and Huan Liu

VULCAN: Vulnerability Assessment Framework for Cloud Computing .................................................................218
   Patrick Kamongi, Srujan Kotikela, Krishna Kavi, Mahadevan Gomathisankaran, and Anoop Singhal

**Session 7A: Security Assessment**

A Security Risk Assessment Framework for SysML Activity Diagrams .................................................................227
   Samir Ouchani, Otmame Aït Mohamed, and Mourad Debbabi

The Determination Method for Software Reliability Qualitative Indices .................................................................237
   Qiuying Li, Lei Luo, and Jun Ai

**Author Index** ................................................................................................................................................................................246
