2013 13th International Conference on Quality Software
(QSIC 2013)

Nanjing, China
29 – 30 July 2013
Session 1: Symbolic Execution

Symbolic Execution of Virtual Devices ................................................................. 1
   Kai Cong, Fei Xie, and Li Lei

Binary-Level Testing of Embedded Programs ....................................................... 11
   Sébastien Bardin, Philippe Baufreton, Nicolas Cornuet, Philippe Herrmann, and Sébastien Labbé

A Search Strategy Guided by Uncovered Branches for Concolic Testing ........... 21
   Qixing Dong, Jun Yan, Jian Zhang, and Fanping Zeng

Session 2: QoS (1)

Measuring Qualities for OSGi Component-Based Applications .......................... 25
   Salma Hamza, Salah Sadou, and Régis Fleurquin

A Study on the Efficiency Aspect of Data Race Detection: A Compiler Optimization Level
Perspective ................................................................................................................. 35
   Changjiang Jia and W.K. Chan

Bayesian Probabilistic Monitor: A New and Efficient Probabilistic Monitoring Approach Based on Bayesian Statistics ................................................................. 45
   Yuelong Zhu, Meijun Xu, Pengcheng Zhang, Wenrui Li, and Hareton Leung
Session 3: SQIP Session
Ensuring Safety of Avionics Software at the Architecture Design Level: An Industrial Case
Study .................................................................55
   Ji Wu, Tao Yue, Shaukat Ali, and Huihui Zhang
Outsourcing Software Testing: A Case Study in the Oulu Area .........................................................65
   Ilkka Tervonen, Antti Haapalahti, Lasse Harjumaa, and Jouni Similä
Using Feature Model to Support Model-Based Testing of Product Lines: An Industrial Case
Study ........................................................................75
   Shuai Wang, Shaukat Ali, Tao Yue, and Marius Liaaen

Session 4: QoS (2)
Improving Service Diagnosis through Invocation Monitoring ..........................................................85
   Cuiting Chen, Hans-Gerhard Gross, and Andy Zaidman
Evaluating Web Service Quality Using Finite State Models ...............................................................95
   Olga Kondratyeva, Natalia Kushik, Ana Cavalli, and Nina Yevtushenko
An Empirical Study of Adoption of Software Testing in Open Source Projects ................................103
   Pavneet Singh Kochhar, Tegawendé F. Bissyandé, David Lo, and Lingxiao Jiang

Session 5: Static Checking
An Approach for Checking OSEK/VDX Applications ........................................................................113
   Haitao Zhang, Toshiaki Aoki, Kenro Yatake, Min Zhang, and Hsin-Hung Lin
Static Slicing for Python First-Class Objects ......................................................................................117
   Zhaogui Xu, Ju Qian, Lin Chen, Zhifei Chen, and Baowen Xu

Session 6: Software Testing
Improving Test Case Generation from UML Statecharts by Using Control, Data
and Communication Dependencies .....................................................................................................125
   Valentin Chimisliu and Franz Wotawa
PCTF: An Integrated, Extensible Cloud Test Framework for Testing Cloud Platforms
and Applications .................................................................................................................................135
   Ganesh Neelakanta Iyer, Jayakhanna Pasimuthu, and Ramesh Loganathan

Session 7: Software Faults (1)
The Right Choice Matters! SMT Solving Substantially Improves Model-Based Debugging
of Spreadsheets .................................................................................................................................139
   Simon Außerlechner, Sandra Frühmann, Wolfgang Wieser, Birgit Hofer, Raphael Spörk,
   Clemens Mühlbacher, and Franz Wotawa
An Approach to Fully Recognizing Addressable Expression ................................................................149
   Yukun Dong, Ying Xing, Dahai Jin, Yunzhan Gong, and Kai Liu
On the Correlation between the Effectiveness of Metamorphic Relations and Dissimilarities of Test Case Executions .........................................................................................................................153
  Yuxiang Cao, Zhi Quan Zhou, and Tsong Yueh Chen

Session 8: DSL
Requirements-Driven Testing of Domain-Specific Core Language Models Using Scenarios ..........................................................163
  Stefan Sobernig, Bernhard Hoisl, and Mark Strembeck
Improving the Quality of Context-Aware Applications: An Activity-Oriented Context Approach .................................................................173
  Xuansong Li, Xianping Tao, and Jian Lu
Providing Support for Specifying Redundancy Tactics Using Aspect-Oriented Modeling ...............................................................183
  Xiang Qiu and Li Zhang

Session 9: Software Faults (2)
A Comparison of Mutation Analysis Tools for Java .............................................................................................................................187
  Mickaël Delahaye and Lydie du Bousquet
Automatically Mining High Level Patterns of Software Faults within Methods ..................................................................................196
  Hailong Zhang, Dalin Zhang, Dahai Jin, Yunzhan Gong, and Chengcheng Wang
An Empirical Study of Bugs in Software Build Systems .....................................................................................................................200
  Xin Xia, Xiaozhen Zhou, David Lo, and Xiaqiong Zhao

Session 10: Fault Localization
CLPS-MFL: Using Concept Lattice of Program Spectrum for Effective Multi-fault Localization ...............................................................204
  Xiaobing Sun, Bixin Li, and Wanzhi Wen
ColFinder Collaborative Concurrency Bug Detection ..........................................................................................................................208
  Zhendong Wu, Kai Lu, Xiaoping Wang, and Xu Zhou
Backward-Slice-Based Statistical Fault Localization without Test Oracles ..........................................................................................212
  Yan Lei, Xiaoguang Mao, and Tsong Yueh Chen

The Symposium on Engineering Test Harnesses (TSETH)
Using the 5W+1H Model in Reporting Systematic Literature Review: A Case Study on Software Testing for Cloud Computing ..................................................222
  Changjiang Jia and Yuen Tak Yu
Incremental Identification of Categories and Choices for Test Case Generation: A Study of the Software Practitioners’ Preferences ..................................................................................230
  Pak-Lok Poon, Tsong Yueh Chen, and T.H. Tse
Similarity-Based Search for Model Checking: A Pilot Study with Java PathFinder ..................................................................................238
  Elmin Ibrahimov, Jixing Wang, and Zhi Quan Zhou
Oracles Are Hardly Attain’d, and Hardly Understood: Confessions of Software Testing Researchers ..........................................................................................................................245
  W.K. Chan and T.H. Tse
Leveraging a Constraint Solver for Minimizing Test Suites ...............................................................253
José Campos and Rui Abreu

Impacts of Test Suite’s Class Imbalance on Spectrum-Based Fault Localization Techniques .................................260

The ART of Divide and Conquer: An Innovative Approach to Improving the Efficiency of Adaptive Random Testing .................................................................................................................268
Cliff Chow, Tsong Yueh Chen, and T.H. Tse

Concise Papers

Taming Deadlocks in Multithreaded Programs ..............................................................................................276
Yan Cai, W.K. Chan, and Y.T. Yu

Edward Y.Y. Kan

Adaptive Combinatorial Testing ..................................................................................................................284
Changhai Nie, Hareton Leung, and Kai-Yuan Cai

A Theoretical Study: The Impact of Cloning Failed Test Cases on the Effectiveness of Fault Localization .................................................................................................................................288
Yichao Gao, Zhenyu Zhang, Long Zhang, Cheng Gong, and Zheng Zheng

International Workshop on Testing and Verification of Embedded Computing Systems (TVECS)

Automated Test Case Generation for Embedded Software Using Extended Interface Automata ........................................292
Chao Zhang, Xiaoying Bai, Junlong Li, and Renwei Zhang

A Low-Cost Fault Tolerance Technique in Multi-media Applications through Configurability .................................299
Lanfang Tan and Ying Tan

An Approach to Reliable Software Architectures Evolution .....................................................................................305
Xu Li and Linpeng Huang

A Bidirectional Framework for Model Synchronization in Component-Based Software Development .................................................................................................................................................................313
Luxi Chen, Linpeng Huang, Chen Li, and Tao Zan

On Schedulability Analysis for Embedded Systems with AADL Model ..................................................................320
Yunwei Dong, Yao Cheng, Tingting Wu, and Hong Ye

An Approach for Fault Localization Based on Program Slicing and Bayesian .......................................................326
Yingyi Liu, Wei Li, Shujuan Jiang, Yanmei Zhang, and Xiaolin Ju

Automatic Validation of Design Decision Based on Multiple Analysis Methods Integration ........................................333
Jiayu Luo, Ruixing Huang, and Xiangping Chen

Abstraction Based Domain Ontology Extraction for Idea Creation ................................................................. 341
   Delin Jing, Hongji Yang, and Yingchun Tian

Performance Testing Framework for REST-Based Web Applications ............................................................. 349
   Chia Hung Kao, Chun Cheng Lin, and Juei-Nan Chen

Applying Cloud Computing Technologies to Gerontology and Geriatrics Health Care System (GGHCS) ...................................................................................................................... 355
   Tse-Chuan Hsu, Chih-Hung Chang, William C. Chu, Shinn-Ying Ho, Nien-Lin Hsueh, and Wei-Bin Lee

A Mobile Centered and Web Service Integrated Approach for Legacy eHealth Web Migration ............................. 361
   Nien Lin Hsueh, Pei-Sheng Chen, Cheng-Chung Chu, Chao-Tung Yang, Chih-Wei Lu, and Chih-Hung Chang

Towards Designing a Quality Software System for Mental Disease Treatment through Artistic Painting Therapy ................................................................. 367
   Yingmei Wang, Jia Jiang, and Hongji Yang

Considerations in Designing Human-Computer Interfaces for Elderly People ..................................................... 372
   Drew Williams, Mohammad Arif Ul Alam, Sheikh Iqbal Ahamed, and William Chu

International Workshop on Quality and Measurement of Software Model-Driven Developments (QUAMES)

Workflow-Based Modeling of Web Application and Automatically Generating Test Sequences ............................. 378
   Lulu Dong, Hua Li, and Sumei Zhang

Interaction Models Matter in the Evaluation of Quality of Conceptual Models .................................................... 382
   Beatriz Marin, Giovanni Giachetti, Oscar Pastor, and Alain Abran

Supporting Reliability Modeling and Analysis for Component-Based Software Architecture: An XML-Based Approach ........................................................................................................... 390
   Weichao Luo and Linpeng Huang

Dealing with Software Model Quality in Practice: Experience in a Research Project ........................................... 396
   Jose Luis de la Vara and Huáscar Espinoza

Author Index ......................................................................................................................................................... 406
