2013 IEEE International Symposium on Information Theory
(ISIT 2013)

Istanbul, Turkey
7-12 July 2013

Pages 1-886
Program

2013 IEEE International Symposium on Information Theory

Single-User Source-Channel Coding

Systematic Lossy Source Transmission over Gaussian Time-Varying Channels
Iñaki Estella Aguerri (Centre Tecnològic de la Comunicació de Catalunya (CTTC), Spain), Deniz Gündüz (Imperial College London, United Kingdom) ................................................................. 1

On Zero Delay Source-Channel Coding: Functional Properties and Linearity Conditions
Emrah Akyol (UCSB, USA), Kumar Viswanatha (UCSB, USA), Kenneth Rose (University of California, Santa Barbara, USA), Tor A. Ramstad (Norwegian University of Science and Technology, Norway) ........................................................................................................................ 6

Gaussian HDA Coding with Bandwidth Expansion and Side Information at the Decoder
Erman Köken (UC Riverside, USA), Ertem Tuncel (UC Riverside, USA) ................................................................. 11

Dynamic Joint Source-Channel Coding with Feedback
Tara Javidi (UCSD, USA), Andrea Goldsmith (Stanford University, USA) ................................................................. 16

Interference and Feedback

Bursty Interference Channel with Feedback
I-Hsiang Wang (EPFL, Switzerland), Changho Suh (KAIST, Korea), Suhas Diggavi (University of California Los Angeles, USA), Pramod Viswanath (University of Illinois, Urbana-Champaign, USA) ........................................................................................................................ 21

Interference Channel with Intermittent Feedback
Can Karakus (University of California, Los Angeles, USA), I-Hsiang Wang (EPFL, Switzerland), Suhas Diggavi (University of California Los Angeles, USA) ........................................................................................................................ 26

Interactive Interference Alignment
Quan Geng (University of Illinois at Urbana-Champaign, USA), Sreeram Kannan (University of Illinois, Urbana-Champaign, USA), Pramod Viswanath (University of Illinois, Urbana-Champaign, USA) ........................................................................................................................ 31

Feedback Can Increase the Degrees of Freedom of the Rank-Deficient Interference Channel
Sung Ho Chae (KAIST, Korea), Changho Suh (KAIST, Korea), Sae-Young Chung (KAIST, Korea) ........................................................................................................................ 36

Error Probability

Convexity of Error Rates in Digital Communications Under Non-Gaussian Noise
Sergey Loyka (University of Ottawa, Canada), Victoria Kostina (Princeton University, USA), Francois Gagnon (Ecole de Technologie Superieure, Canada) ........................................................................................................................ 41

Generalizing the Sampling Property of the Q-function for Error Rate Analysis of Cooperative Communication in Fading Channels
Tugcan Aktaş (Middle East Technical University, Turkey), Ali Özgür Yılmaz (Middle East Technical University, Turkey), Emre Aktaş (Hacettepe University, Turkey) ........................................................................................................................ 46

Exact Symbol Error Probability of Square M-QAM Signaling over Generalized Fading Channels subject to Additive Generalized Gaussian Noise
Hamza Soury (King Abdullah University for Science and Technology, Saudi Arabia), Ferkan Yılmaz (King Abdullah University of Science and Technology, Saudi Arabia), Mohamed-Slim Alouini (King Abdullah University of Science and Technology (KAUST), Saudi Arabia) ........................................... 51
Exact Capture Probability Analysis of GSC Receivers over i.n.d. Rayleigh Fading Channels  
Sung Sik Nam (Sungkyunkwan University, Korea), Hong-Chuan Yang (University of Victoria, Canada), Mohamed-Slim Alouini (King Abdullah University of Science and Technology (KAUST), Saudi Arabia), Dong In Kim (Sungkyunkwan University (SKKU), Korea)  ______________ 56

Communication Networks

Random threshold graphs with exponential fitness: The width of the phase transition for connectivity  
Armand M. Makowski (University of Maryland, USA), Osman Yağan (Carnegie Mellon University, USA)  ____________________________________________________________ 61

Age of Information Under Random Updates  
Clement Kam (Naval Research Laboratory, USA), Sastry Kompella (Naval Research Laboratory, USA), Anthony Ephremides (University of Maryland at College Park, USA)  ______________ 66

Anonymity of a Buffer Constrained Chaum Mix: Optimal strategy and Asymptotics  
Abhishek Mishra (Lehigh University, USA), Parv Venkitasubramaniam (Lehigh University, USA)  ____________________________________________________________ 71

Optimized Relay-Route Assignment for Anonymity in Wireless Networks  
Chouchang Yang (University of Washington, USA), Basel Alomair (King Abdulaziz City for Science and Technology, Saudi Arabia), Radha Poovendran (University of Washington, USA)  ______________ 76

Mismatched Decoding and Capacity

Superposition Codes for Mismatched Decoding  
Jonathan Scarlett (University of Cambridge, United Kingdom), Alfonso Martinez (Universitat Pompeu Fabra, Spain), Albert Guillén i Fàbregas (ICREA and Universitat Pompeu Fabra, Spain)  ____________________________________________________________ 81

The Mismatched Multiple-Access Channel: General Alphabets  
Jonathan Scarlett (University of Cambridge, United Kingdom), Alfonso Martinez (Universitat Pompeu Fabra, Spain), Albert Guillén i Fàbregas (ICREA and Universitat Pompeu Fabra, Spain)  ____________________________________________________________ 86

The Zero-Undetected-Error Capacity of the Low-Noise Cyclic Triangle Channel  
Christoph Bunte (ETH Zurich, Switzerland), Amos Lapidoth (ETHZ, Switzerland), Alex Samorodnitsky (The Hebrew University of Jerusalem, Israel)  ____________________________________________________________ 91

On Coding Schemes for Channels with Mismatched Decoding  
Anelia Somekh-Baruch (Bar-Ilan University, Israel)  ____________________________________________________________ 96

Compressed Sensing 1

Achieving Bayes MMSE Performance in the Sparse Signal + Gaussian White Noise Model when the Noise Level is Unknown  
David Donoho (Stanford University, USA), Galen Reeves (Stanford University, USA)  ______________ 101

Almost Lossless Analog Signal Separation  
David Stotz (ETH Zurich, Switzerland), Erwin Riegler (Vienna University of Technology (VUT), Austria), Helmut Bölcskei (ETH Zurich, Switzerland)  ____________________________________________________________ 106

From compression to compressed sensing  
Shirin Jalali (New York University, USA), Arian Maleki (Rice University, USA)  ____________________________________________________________ 111

The Minimax Noise Sensitivity in Compressed Sensing  
Galen Reeves (Stanford University, USA), David Donoho (Stanford University, USA)  ______________ 116
Algebraic Codes 1

On Cyclic DNA Codes
Kenza Guenda (Victoria, Canada), T. Aaron Gulliver (University of Victoria, Canada), Patrick Solé (Telecom ParisTech, France) ................................................................. 121

Generalizing Bounds on the Minimum Distance of Cyclic Codes Using Cyclic Product Codes
Alexander Zeh (University of Ulm, Germany), Antonia Wachter-Zeh (Ulm University, Germany), Maximilian Gadouleau (Durham University, United Kingdom), Sergey Bezzateev (Saint-Petersburg Aerospace Instrumentation University, Russia) ................................................................. 126

Low-Complexity Encoding of Binary Quasi-Cyclic Codes Based on Galois Fourier Transform
Li Tang (Beihang University, Beijing, P.R. China), Qin Huang (Beihang University, Beijing, P.R. China), Zulin Wang (Beihang University, P.R. China), Zixiang Xiong (Texas A&M University, USA) ........................................................................................................ 131

Upper Bounds on the Size of Grain-Correcting Codes
Navin Kashyap (Indian Institute of Science, India), Gilles Zémor (Université Bordeaux 1, France) .................................................................................................................. 136

Constrained Coding

On Efficient Second-Order Spectral-Null Codes using Sets of m1-Balancing Functions
Raffaele Mascella (Università di Teramo, Italy), Danilo Pelusi (University of Teramo, Italy), Laura Pezza (Università di Roma "La Sapienza", Italy), Samir El mougy (Mansoura University, Egypt), Luca G. Tallini (Università di Teramo, Italy), Bella Bose (Oregon State University, USA) .................................................................................................................................. 141

Pseudo-Ternary Run-Length Limited Spectrum Shaped Codes
Oleg F Kurmaev (Huawei Russia Research Centre, Russia), Zeng Yanxing (Huawei Technologies, P.R. China), Sergei V. Fedorenko (Huawei Russia Research Centre, Russia), Vladimir Ivanov (Huawei Technologies, Russia), Jianqiang Shen (Huawei Technologies, Russia) .................................................................................................................................. 146

Hamming-weight constrained coded arrays based on covering codes
Erik Ordentlich (Hewlett-Packard Laboratories, USA), Ron M. Roth (Technion, Israel) ................................................................. 151

Sneak-Path Constraints in Memristor Crossbar Arrays
Yuval Cassuto (Technion, Israel), Shahar Kvatinsky (Technion, Israel), Eitan Yaakobi (Caltech, USA) .................................................................................................................. 156

Quantum Capacity

On simultaneous min-entropy smoothing
Lukas Drescher (ETH Zuerich, Switzerland), Omar Fawzi (ETH Zuerich, Switzerland) .................................................. 161

Achieving the Holevo Capacity of a Pure State Classical-Quantum Channel via Unambiguous State Discrimination
Masahiro Takeoka (National Institute of Information and Communications Technology, Japan), Hari Krovi (Raytheon BBN Technologies, USA), Saikat Guha (Raytheon BBN Technologies, USA) ........................................................................................................ 166

Towards a strong converse for the quantum capacity (of degradable channels)
Ciara Morgan (Leibniz Universität Hannover, Germany), Andreas Winter (Universitat Autonoma de Barcelona, Spain) ........................................................................................................ 171

Capacities of Gaussian Classical-Quantum Channels
Alexander Holevo (Steklov Mathematical Institute, Russia) .................................................................................................. 176
Joint Source-Channel Coding

Gaussian State Amplification with Noisy State Observations
Bernd Bandemer (University of California, San Diego, USA), Chao Tian (AT&T Labs-Research, Shannon Laboratory, USA), Shlomo (Shitz) Shamai (The Technion, Israel) ........................................... 181

Information Embedding on Actions
Behzad Ahmadi (New Jersey Institute of Technology, USA), Himanshu Asnani (Stanford University, USA), Oswaldo Simeone (New Jersey Institute of Technology, USA), Haim H Permuter (Ben-Gurion University, Israel) ............................................................................. 186

Bit-error Resilient Index Assignment for Multiple Description Scalar Quantizers
Sorina Dumitrescu (McMaster University, Canada), Yinghan Wan (McMaster University, Canada) ................................................................................................................. 191

Network Compression: Worst-Case Analysis
Himanshu Asnani (Stanford University, USA), Ilan Shomorony (Cornell University, USA), Salman Avestimehr (Cornell University, USA), Tsachy Weissman (Stanford University, USA) ........ 196

Communicating over MACs

Optimum Transmission through the Gaussian Multiple Access Channel
Daniel Calabuig (Universidad Politecnica de Valencia, Spain), Ramy Gohary (Carleton University, Canada), Halim Yanikomeroglu (Carleton University, Canada) ........................................... 201

CSMA using the Bethe Approximation for Utility Maximization
Se-Young Yun (KTH, Sweden), Jinwoo Shin (KAIST, Korea), Yung Yi (KAIST, Korea) ........................................... 206

On a Multiple-Access in a Vector Disjunctive Channel
Alexey A. Frolov (IITP RAS, Russia), Victor V. Zyablov (Institute for Information Transmission Problems (IITP) RAS, Russia), Vladimir Sidorenko (Ulm University, Germany), Robert F.H. Fischer (Ulm University, Germany) ........................................... 211

Riemannian-Geometric Optimization Methods for MIMO Multiple Access Channels
Panayotis Mertikopoulos (French National Center for Scientific Research (CNRS), France), Aris Moustakas (University of Athens, Greece) ................................................................................. 216

Inequalities in Information Theory and Coding

Refined Bounds on the Empirical Distribution of Good Channel Codes via Concentration Inequalities
Maxim Raginsky (University of Illinois at Urbana-Champaign, USA), Igal Sason (Technion - Israel Institute of Technology, Israel) ................................................................................. 221

Which Boolean Functions are Most Informative?
Gowtham Kumar (Stanford University, USA), Thomas Courtade (Stanford University, USA) ........ 226

Lovász’s Theta Function, Rényi’s Divergence and the Sphere-Packing Bound
Marco Dalai (University of Brescia, Italy) ................................................................................................. 231

Equivalence of Two Proof Techniques for Non-Shannon-type Inequalities
Tarik Kaced (The Chinese University of Hong Kong, Hong Kong) ......................................................................... 236

Wireless Networks 1

On the Capacity of Picocellular Networks
Dinesh Ramasamy (University of California, Santa Barbara, USA), Radha Krishna Ganti (Indian Institute of Technology Madras, India), Upamanyu Madhow (University of California, Santa Barbara, USA) ........................................................................................................... 241
**Optimal Wireless Scheduling with Interference Cancellation**
Mustafa Akdeniz (NYU - Poly, USA), Sundeep Rangan (Polytechnic University of New York University, USA) ................................................................. 246

**The Aggregate Throughput in Random Wireless Networks with Successive Interference Cancellation**
Xinchen Zhang (University of Notre Dame, USA), Martin Haenggi (University of Notre Dame, USA) .................................................................................................................. 251

**Delay Scaling in Poisson Networks**
Martin Haenggi (University of Notre Dame, USA) .................................................................................................................. 256

**Channel Coding with Uncertainty**

*Unsupervised Learning and Universal Communication*
Vinith Misra (Stanford University, USA), Tsachy Weissman (Stanford University, USA) ............... 261

*Codes for Limited View Adversarial Channels*
Reihaneh Safavi-Naini (University of Calgary, Canada), Pengwei Wang (University of Calgary, Canada) .................................................................................................................. 266

*On AVCs with Quadratic Constraints*
Farzin Haddadpour (Sharif University of Technology, Iran), Mahdi Jafari Siavoshani (The Chinese University of Hong Kong, Hong Kong), Mayank Bakshi (The Chinese University of Hong Kong, Hong Kong), Sidharth Jaggi (Chinese University of Hong Kong, Hong Kong) ................. 271

*Coding with Encoding Uncertainty*
Jad Hachem (University of California, Los Angeles, USA), I-Hsiang Wang (EPFL, Switzerland), Christina Fragouli (EPFL, Switzerland), Suhas Diggavi (University of California Los Angeles, USA) ........................................................................................................ 276

*An Upper Bound on the Capacity of Vector Dirty Paper with Unknown Spin and Stretch*
David T.H. Kao (Cornell University, USA), Ashutosh Sabharwal (Rice University, USA) ............... 281

**Compressed Sensing 2**

*Time Invariant Error Bounds for Modified-CS based Sparse Signal Sequence Recovery*
Jinchun Zhan (Iowa State University, USA), Namrata Vaswani (Iowa State University, USA) .............. 286

*Distortion-Based Achievability Conditions for Joint Estimation of Sparse Signals and Measurement Parameters from Undersampled Acquisitions*
Mehmet Akcakaya (Harvard Medical School, USA), Vahid Tarokh (Harvard University, USA) ............... 291

*Lower bounds for quantized matrix completion*
Mary Wootters (University of Michigan, USA), Yaniv Plan (University of Michigan, USA), Mark Davenport (Georgia Institute of Technology, USA), Ewout Van Den Berg (Stanford, USA) ............... 296

*SRL1: Structured Reweighted L1 Minimization for Compressive Sampling of Videos*
Sheng Wang (Oklahoma State University, USA), Behzad Shahrasbi (Oklahoma State University, USA), Nazanin Raahnavaard (Oklahoma State University, USA) ........................................................................................................ 301

**Algebraic Codes 2**

*Multiply Constant Weight Codes*
Zouha Cherif Jouini (Hubert Curient Lab / Télécom ParisTech, France), Patrick Solé (Telecom ParisTech, France), Jean-Luc Danger (Telecom Paris, France), Sylvain Guilley (Telecom ParisTech, France), Jon-Lark Kim (Sogang University Seoul, Korea) ........................................................................................................ 306

*Single-track Gray codes with non-k-spaced heads*
Fan Zhang (Beijing Jiaotong University, P.R. China), Hengjun Zhu (Beijing Jiaotong University, P.R. China) ........................................................................................................ 311
A Reduced-Complexity Algorithm For Polynomial Interpolation
Yuan Zhu (Sun Yat-sen University, P.R. China), Tang Siyun (Sun Yat-sen University, P.R. China) ........................................................................................................................................................................... 316

Optimal Codes in the Enomoto-Katona Space
Yeow Meng Chee (Nanyang Technological University, Singapore), Han Mao Kiah (Nanyang Technological University, Singapore), Hui Zhang (Nanyang Technological University, Singapore), Xiande Zhang (Nanyang Technological University, Singapore) ........................................................................ 321

Codes for Distributed Storage 1

Array BP-XOR Codes for Reliable Cloud Storage Systems
Yongge Wang (University of North Carolina at Charlotte, USA) ........................................................................................................................................................................... 326

A Piggybacking Design Framework for Read- and Download-efficient Distributed Storage Codes
K. v. Rashmi (University of California at Berkeley, USA), Nihar B Shah (University of California at Berkeley, USA), Kannan Ramchandran (University of California at Berkeley, USA) ........................................................................................................................................................................... 331

Characterizations and construction methods for linear functional-repair storage codes
Henk D.L. Hollmann (Nanyang Technological University, Singapore), Wencin Poh (Nanyang Technological University, Singapore) ........................................................................................................................................................................... 336

A ZigZag-Decodable Code with the MDS Property for Distributed Storage Systems
Chi Wan Sung (City University of Hong Kong, Hong Kong), Xueqing Gong (City University of Hong Kong, Hong Kong) ........................................................................................................................................................................... 341

Quantum Keys and Codes

Short random circuits define good quantum error correcting codes
Winton Brown (Universite de Sherbrooke, Canada), Omar Fawzi (ETH Zuerich, Switzerland) .... 346

Improved Asymptotic Key Rate of the B92 Protocol
Ryutaroh Matsumoto (Tokyo Institute of Technology, Japan) ........................................................................................................................................................................... 351

Efficient Quantum Channel Coding Scheme Requiring No Preshared Entanglement
David Sutter (ETH Zurich, Switzerland), Joseph M Renes (ETH Zurich, Switzerland), Frederic Dupuis (ETH, Switzerland), Renato Renner (ETH Zurich, Switzerland) ........................................................................................................................................................................... 354

Adaptive Pulse-Position Modulation for High-Dimensional Quantum Key Distribution
Hongchao Zhou (MIT, USA), Gregory Wornell (Massachusetts Institute of Technology, USA) .... 359

Source-Channel Coding for the MAC

Sending a bivariate Gaussian source over a Gaussian MAC with unidirectional conferencing encoders
Shraga Bross (Bar-Ilan University, Israel), Yaron Laufer (Bar-Ilan University, Israel) .................. 364

Joint Source-Channel Coding for Multiple-Access Wiretap Channels
Sadaf Salehkalaibar (Sharif University of Technology, Iran), Mohammad Reza Aref (Sharif University of Tech., Iran) ........................................................................................................................................................................... 369

Random Access and Source-Channel Coding Error Exponents for Multiple Access Channels
Lóránt Farkas (Budapest University of Technology and Economics, Hungary), Tamás Kói (Budapest University of Technology and Economics, Hungary) ........................................................................................................................................................................... 374

Time-Asynchronous Gaussian Multiple Access Channel with Correlated Sources
Hamidreza Ebrahimzadeh Saffar (University of Waterloo, Canada), Patrick Mitran (University of Waterloo, Canada) ........................................................................................................................................................................... 379
Interference Management

Finding the Number of Feasible Solutions for Linear Interference Alignment Problems
Óscar González (University of Cantabria, Spain), Ignacio Santamaría (University of Cantabria, Spain), Carlos Beltrán (University of Cantabria, Spain) ................................................................. 384

Opportunistic Interference Management for Multicarrier Systems
Shaunak Mishra (University of California, Los Angeles, USA), I-Hsiang Wang (EPFL, Switzerland), Suhas Diggavi (University of California Los Angeles, USA) ....................................................... 389

Impact of Topology on Interference Networks with No CSIT
Navid NaderiAlizadeh (Cornell University, USA), Salman Avestimehr (Cornell University, USA) .......... 394

Topological Interference Management with Alternating Connectivity
Hua Sun (University of California, Irvine, USA), Chunhua Geng (University of California, Irvine, USA), Syed Ali Jafar (University of California Irvine, USA) ...................................................... 399

Information Measures and Inequalities

Information Geometry in Mathematical Finance
Thomas Breuer (Forschungszentrum PPE, FH Vorarlberg, Austria), Imre Csiszár (Renyi Institute, Hungarian Academy of Science, Hungary) ................................................................. 404

Information Theoretic Measures of Distances and their Econometric Applications
Ferdinando Cicalese (Università di Salerno, Italy), Luisa Gargano (University of Salerno, Italy), Ugo Vaccaro (University of Salerno, Italy) ................................................................. 409

Entropy Bounds for Discrete Random Variables via Coupling
Igal Sason (Technion - Israel Institute of Technology, Israel) ................................................................. 414

Logarithmic Sobolev inequalities and strong data processing theorems for discrete channels
Maxim Raginsky (University of Illinois at Urbana-Champaign, USA) .................................................. 419

Wireless Networks 2

Large-Scale Ad Hoc Networks with Rate-Limited Infrastructure: Information-Theoretic Operating Regimes
Cheol Jeong (Samsung Electronics, Korea), Won-Yong Shin (Dankook University, Korea) ............. 424

Cooperative Unicasting in Large Wireless Networks
Andrés Altieri (University of Buenos Aires, Argentina), Leonardo Rey Vega (University of Buenos Aires, Facultad de Ingeniería, Argentina), Pablo Piantanida (SUPELEC, France), Cecilia G. Galarza (University of Buenos Aires, Argentina) ................................................. 429

Telescopic beamforming for large wireless networks
Alla Merzakreeva (EPFL, Switzerland), Olivier Lévêque (EPFL, Switzerland), Ayfer Özgür (Stanford University, USA) ........................................................................................................ 434

Large-System Analysis of the K-Hop AF MIMO Relay Channel with Arbitrary Inputs
Maksym A. Girnyk (KTH Royal Institute of Technology, Sweden), Mikko Vehkaperä (Aalto University, Finland), Lars K. Rasmussen (KTH Royal Institute of Technology, Sweden) ......................... 439

Information and Estimation

Minimax Filtering Regret via Relations Between Information and Estimation
Albert No (Stanford University, USA), Tsachy Weissman (Stanford University, USA) ..................... 444

Pointwise Relations between Information and Estimation in the Poisson Channel
Jiantao Jiao (Stanford University, USA), Kartik Venkat (Stanford University, USA), Tsachy Weissman (Stanford University, USA) .......................................................................................... 449
Generalized Bregman Divergence and Gradient of Mutual Information for Vector Poisson Channels
Liming Wang (Duke University, USA), Miguel Rodrigues (University College London, United Kingdom), Lawrence Carin (Duke University, USA) .............................................................................................................. 454

On Information-Estimation Relationships over Binomial and Negative Binomial Models
Dongning Guo (Northwestern University, USA) .............................................................................................................. 459

Compressed Sensing 3

Computing a $k$-sparse $n$-length Discrete Fourier Transform using at most $4k$ samples and $O(k \log k)$ complexity
Sameer Pawar (University of California, Berkeley, USA), Kannan Ramchandran (University of California at Berkeley, USA) .............................................................................................................. 464

Randomized Recovery for Boolean Compressed Sensing
Mitra Fatemi (EPFL, Switzerland), Martin Vetterli (EPFL, Switzerland) .............................................................................. 469

Reconstruction Guarantee Analysis of Binary Measurement Matrices Based on Girth
Xinji Liu (Tsinghua University, P.R. China), Shutao Xia (Tsinghua University, P.R. China) .............................................. 474

Constructions of Quasi-Cyclic Measurement Matrices Based on Array Codes
Xinji Liu (Tsinghua University, P.R. China), Shutao Xia (Tsinghua University, P.R. China) .............................................. 479

Algebraic Codes 3

On Frames from Abelian Group Codes
Matthew Thill (California Institute of Technology, USA), Babak Hassibi (California Institute of Technology, USA) .............................................................................................................. 484

Explicit Constructions of Quasi-Uniform Codes from Groups
Eldho Thomas (Nanyang Technological University, Singapore), Frederique Oggier (Nanyang Technological University, Singapore) .............................................................................................................. 489

Coding for the Lee and Manhattan Metrics with Weighing Matrices
Tuvi Etzion (Technion-Israel Institute of Technology, Israel), Alexander Vardy (University of California, San Diego, USA), Eitan Yaakobi (Caltech, USA) .................................................................................. 494

Complexity of Dependencies in Bounded Domains, Armstrong Codes, and Generalizations
Yeow Meng Chee (Nanyang Technological University, Singapore), Hui Zhang (Nanyang Technological University, Singapore), Xiande Zhang (Nanyang Technological University, Singapore) .............................................................................................................. 499

Rank-Metric Codes and Distributed Storage

Explicit MBR All-Symbol Locality Codes
Govinda M Kamath (Indian Institute of Science, India), Natalia Silberstein (The University of Texas at Austin, USA), N Prakash (Indian Institute of Science, India), Ankit Singh Rawat (The University of Texas at Austin, USA), V Lalitha (Indian Institute of Science, India), Onur Ozan Koyluoglu (The University of Texas at Austin, USA), P Vijay Kumar (Indian Institute of Science, India), Sriram Vishwanath (University of Texas Austin, USA) .............................................................................................................. 504

Rank metric and Gabidulin codes in characteristic zero
Daniel Augot (INRIA -- Saclay-Ile-de-France, France), Pierre Loidreau (Université de Rennes 1, France), Gwénaël Robert (Université de Rennes1, France) .............................................................................................................. 509

New Lower Bounds for Constant Dimension Codes
Natalia Silberstein (The University of Texas at Austin, USA), Anna-Lena Trautmann (Universität Zürich, Switzerland) .............................................................................................................. 514
### Quantum Stabilizers and Codes

**Quantum Stabilizer Codes From Difference Sets**  
Yixuan Xie (University of New South Wales, Australia), Jinhong Yuan (University of New South Wales, Australia), Robert Malaney (University of New South Wales, Australia)  .................................................. 524

**Stabilizer Formalism for Generalized Concatenated Quantum Codes**  
Yun-Jiang Wang (University of Calgary, Canada), Bei Zeng (University of Guelph, Canada), Markus Grassl (Centre for Quantum Technologies (CQT), Singapore), Barry Sanders (University of Calgary, Canada)  .................................................................................. 529

**Leveraging Automorphisms of Quantum Codes for Fault-Tolerant Quantum Computation**  
Markus Grassl (Centre for Quantum Technologies (CQT), Singapore), Martin Rötteler (NEC Laboratories America, Inc., USA)  .................................................................................. 534

### Multi-Terminal Source-Channel Coding

**Gaussian Sensor Networks with Adversarial Nodes**  
Emrah Akyol (UCSB, USA), Kenneth Rose (University of California, Santa Barbara, USA), Tamer Başar (University of Illinois at Urbana-Champaign, USA)  .................................................. 539

**Hybrid Digital-Analog Coding for Interference Broadcast Channels**  
Ahmad Abou Saleh (Queen's University, Canada), Fady Alajaji (Queen's University, Canada), Wai-Yip Geoffrey Chan (Queen's University, Canada)  .................................................................................. 544

**On Necessary Conditions for Multiple-Access-Relay Channels with Correlated Sources**  
Yonathan Murin (Ben-Gurion University, Israel), Ron Dabora (Ben-Gurion University, Israel), Deniz Gündüz (Imperial College London, United Kingdom)  .................................................................................. 549

**Optimal Multiresolution Quantization with Error Detecting Codes for Broadcast Channels**  
James Ho (University of Waterloo, Canada), En-hui Yang (University of Waterloo, Canada)  .................................................................................. 554

**Outer Bounds for Multiterminal Source Coding via a Strong Data Processing Inequality**  
Thomas Courtade (Stanford University, USA)  .................................................................................. 559

### Interference Alignment Techniques

**Multiple-Antenna Interference Channel with Receive Antenna Joint Processing and Real Interference Alignment**  
Mahdi Zamanighomi (Iowa State University, USA), Zhengdao Wang (Iowa State University, USA)  .................................................................................. 564

**CSIT Sharing over Finite Capacity Backhaul for Spatial Interference Alignment**  
Mohsen Rezaee (Vienna University of Technology, Austria), Maxime Guillaud (Vienna University of Technology, Austria), Fredrik Lindqvist (Ericsson Research, Sweden)  .................................................................................. 569

**Integer-Forcing Interference Alignment**  
Vasilis Ntranos (University of Southern California, USA), Viveck Cadambe (MIT, USA), Bobak Nazer (Boston University, USA), Giuseppe Caire (University of Southern California, USA)  .................................................................................. 574

**Feasibility Conditions of Interference Alignment via Two Orthogonal Subcarriers**  
Stefan Dierks (Technische Universität München, Germany), Gerhard Kramer (Technische Universität München, Germany), Wolfgang Zirwas (Nokia Siemens Networks GmbH&CoKG, Germany)  .................................................................................. 579
Entropy Power Inequalities

A New Entropy Power Inequality for Integer-valued Random Variables
Saeid Haghighatshoar (EPFL, Switzerland), Emmanuel Abbe (Princeton University, USA), Emre Telatar (EPFL, Switzerland) ................................................................. 589

The Entropy Power Inequality and Mrs. Gerber's Lemma for Groups of Order $2^n$
Varun Jog (UC Berkeley, USA), Venkat Anantharam (University of California at Berkeley, USA) ................................................................. 594

A New Approach to the Entropy Power Inequality, via Rearrangements
Liyao Wang (Yale University, USA), Mokshay Madiman (University of Delaware, USA) 599

A Variational Perspective over an Extremal Entropy Inequality
Sangwoo Park (Texas A&M University, USA), Erchin Serpedin (Texas A&M University, USA), Marwa Qaraqe (Texas A&M University, USA) ................................................................. 604

A new extremal entropy inequality with applications
Hon Fah Chong (Institute for Infocomm Research, Singapore), Ying-Chang Liang (Institute for Infocomm Research, Singapore) ................................................................. 609

MIMO Networks

Pilot-based Product Superposition for Downlink Multiuser MIMO
Yang Li (University of Texas at Dallas, USA), Aria Nosratinia (University of Texas, Dallas, USA) ................................................................. 614

Joint Spatial Division and Multiplexing - Benefits of Antenna Correlation in Multi-User MIMO
Junyoung Nam (Electronics and Telecommunication Research Institute (ETRI), Korea), Jae Young Ahn (Electronics and Telecommunication Research Institute, Korea) ................................................................. 619

On the Degrees of Freedom of the K-User Time Correlated Broadcast Channel with Delayed CSIT
Paul de Kerret (EURECOM, France), Xinping Yi (EURECOM, France), David Gesbert (Eurecom Institute, France) ................................................................. 624

NetDoFs of the MISO Broadcast Channel with Delayed CSIT Feedback for Finite Rate of Innovation Channel Models
Yohan Lejosne (EURECOM, France), Dirk Slock (Eurecom, France), Yi Yuan-Wu (Orange Labs, France) ................................................................. 629

Universal Techniques

Twice-universal fixed to variable-length random number generators for finite memory sources
Gadiel Seroussi (Hewlett-Packard Laboratories, USA), Marcelo Weinberger (Hewlett-Packard, USA) ................................................................. 634

Universal variable to fixed-length random number generators for finite memory sources
Gadiel Seroussi (Hewlett-Packard Laboratories, USA), Marcelo Weinberger (Hewlett-Packard, USA) ................................................................. 639

Universal Bayesian Measures
Joe Suzuki (Osaka University, Japan) ................................................................. 644

Universal Fixed-to-Variable Source Coding in the Finite Blocklength Regime
Oliver Kosut (Arizona State University, USA), Lalitha Sankar (Arizona State University, USA) ................................................................. 649
Compressed Sensing 4

Phase Diagram and Approximate Message Passing for Blind Calibration and Dictionary Learning
Florent Krzakala (ESPCI, France), Marc Mezard (Université de Paris Sud Orsay, France), Lenka Zdeborova (Institut de Physique Théorique IPhT, CEA Saclay and CNRS, France) .................................................. 659

Fixed Points of Generalized Approximate Message Passing with Arbitrary Matrices
Sundeep Rangan (Polytechnic University of New York University, USA), Philip Schniter (The Ohio State University, USA), Erwin Riegler (Vienna University of Technology (VUT), Austria), Alyson Fletcher (University of California, Santa Cruz, USA), Volkan Cevher (Ecole Polytechnique Federale de Lausanne, Switzerland) .................................................................................................................. 664

Sample Complexity of Bayesian Optimal Dictionary Learning
Ayaka Sakata (Tokyo Institute of Technology, Japan), Yoshiyuki Kabashima (Tokyo Institute of Technology, Japan) .................................................................................................................. 669

Compressive Classification
Hugo Reboredo (University of Porto, Portugal), Francesco Renna (Universidade do Porto, Portugal), Robert Calderbank (Duke University, USA), Miguel Rodrigues (University College London, United Kingdom) .................................................................................................................. 674

k-bit Hamming Compressed Sensing
Tianyi Zhou (University of Technology, Sydney, Australia), Dacheng Tao (University of Technology, Sydney, Singapore) .................................................................................................................. 679

Algebraic Codes for Insertion/Deletion Channels

Lattice Based Codes for Insertion and Deletion Channels
Lin Sok (Telecom ParisTech, France), Patrick Solé (Telecom ParisTech, France), Aslan Tchamkerten (Telecom ParisTech, France) .................................................................................................................. 684

Correcting Grain-Errors in Magnetic Media
Ryan Gabrys (UCLA, USA), Eitan Yaakobi (Caltech, USA), Lara Dolecek (UCLA, USA) .................................................. 689

On $\ell_1$ metric Asymmetric/Unidirectional error control codes, constrained weight codes and $\sigma$-codes
Luca G. Tallini (Università di Teramo, Italy), Bella Bose (Oregon State University, USA) .................................................. 694

An Improvement to Levenshtein’s Upper Bound on the Cardinality of Deletion Correcting Codes
Daniel F Cullina (University of Illinois at Urbana-Champaign, USA), Negar Kiyavash (University of Illinois at Urbana-Champaign, USA) .................................................................................................................. 699

Coding for Memories 1

Rank-Modulation Rewriting Codes for Flash Memories
Eyal En Gad (California Institute of Technology, USA), Eitan Yaakobi (Caltech, USA), Anxiao Andrew Jiang (Texas A&M University, USA), Jehoshua Bruck (California Institute of Technology, USA) .................................................................................................................. 704

Coding Schemes for Multi-Level Channels with Unknown Gain and/or Offset
Kees A. Schouhamer Immink (Turing Machines Inc., The Netherlands) .................................................. 709

Adaptive Threshold Read Algorithms in Multi-level Non-Volatile Memories
Evyatar Hemo (Technion - Institute of Technology, Israel), Yuval Cassuto (Technion, Israel) ............ 714
Quantum Information Theory

A Realizable Receiver for discriminating arbitrary Coherent States near the Quantum Limit
Ranjith Nair (National University of Singapore, Singapore), Saikat Guha (Raytheon BBN Technologies, USA), Si-Hui Tan (Data Storage Institute, Singapore) ................................................................. 729

Arbitrarily Small Amounts of Correlation for Arbitrarily Varying Quantum Channels
Janis Noetzel (Technische Universität München, Germany), Holger Boche (Technische Universität Munich, Germany) ................................................................................................................................. 734

Distillation of Multi-Party Non-Locality With and Without Partial Communication
Helen Ebbe (ETH Zurich, Switzerland), Stefan Wolf (USI Lugano, Switzerland) ................................................................. 739

Classical Communication Rates for Simulating Quantum Resources
Alberto Montina (University of Lugano (USI), Switzerland), Marcel Pfaffhauser (University of Lugano (USI), Switzerland), Stefan Wolf (USI Lugano, Switzerland) ................................................................. 744

Capacity of Multi-User Systems to Within Constant Gap

The Capacity to within a constant gap of the Gaussian Half-Duplex Relay Channel
Martina Cardone (Eurecom, France), Daniela Tuninetti (University of Illinois at Chicago, USA), Raymond Knopp (Institut Eurecom, France), Umer Salim (Intel Mobile Communications, France) ................................................................................................................................. 749

The symmetric sum-capacity of the Gaussian Half-Duplex Causal Cognitive Interference Channel to within a constant gap
Martina Cardone (Eurecom, France), Daniela Tuninetti (University of Illinois at Chicago, USA), Raymond Knopp (Institut Eurecom, France), Umer Salim (Intel Mobile Communications, France) ................................................................................................................................. 754

The Capacity Region of the Wireless Ergodic Fading Interference Channel with Partial CSIT to Within One Bit
Reza K. Farsani (Institute for Research in Fundamental Sciences (IPM), Iran) ................................................................. 759

The Symmetric Ergodic Capacity of Phase-Fading Interference Channels to within a Constant Gap: 3 Users in the Strong and Very Strong Regimes
Michael Farag (Boston University, USA), Bobak Nazer (Boston University, USA) ................................................................. 764

Polarization Theory

Polarization of Quasi-Static Fading Channels
Joseph Jean Boutros (Texas A&M University at Qatar, Qatar), Ezio Biglieri (Universitat Pompeu Fabra, Barcelona, Spain) ................................................................................................................................. 769

Polarization improves $E_0$
Mine Alsan (EPFL, Switzerland), Emre Telatar (EPFL, Switzerland) ................................................................................................................................. 774

Polarization of the Rényi Information Dimension for Single and Multi Terminal Analog Compression
Saeid Haghighatshoar (EPFL, Switzerland), Emmanuel Abbe (Princeton University, USA) ................................................................. 779

On the Correlation Between Polarized BECs
Mani Bastaniparizi (EPFL, Switzerland), Emre Telatar (EPFL, Switzerland) ................................................................................................................................. 784
Deterministic Network Models

Cyclic linking network
Chung Chan (The Chinese University of Hong Kong, Hong Kong) ........................................... 789

Euclidean Information Theory of Networks
Shao-Lun Huang (Massachusetts Institute of Technology, USA), Changho Suh (KAIST, Korea),
Lizhong Zheng (Massachusetts Institute of Technology, USA) .................................................. 794

Parallel Linear Deterministic Interference Channels with Feedback: Combinatorial Structure and
Separability
Suvarup Saha (Northwestern University, USA), Randall Berry (Northwestern University, USA) ...... 799

The Deterministic Multicast Capacity of 4-Node Relay Networks
Ahmed A Zewail (Nile University, Egypt), Yahya Mohasseb (Nile University, Egypt),
Mohammed Nafie (Nile University, Egypt), Hesham El Gamal (Ohio State University, USA) ............ 804

Wireless Networks 3

Multi-lane Vehicle-to-Vehicle Networks with Time-Varying Radio Ranges: Information
Propagation Speed Properties
Emmanuel Baccelli (INRIA, France), Philippe Jacquet (Alcatel Lucent Bell Labs, France),
Bernard Mans (Macquarie University, Australia), Georgios Rodolakis (ITI, CERTH, Greece) ............ 809

Optimal Distributed Broadcasting with Per-neighbor Queues in Acyclic Overlay Networks with
Arbitrary Underlay Capacity Constraints
Shaoquan Zhang (The Chinese University of Hong Kong, Hong Kong), Minghua Chen (The
Chinese University of Hong Kong, P.R. China), Zongpeng Li (University of Calgary, Canada),
Longbo Huang (University of California, Berkeley, USA) ............................................................ 814

On Hybrid Access for Cognitive Radio Systems with Time-Varying Connectivity
Jeongho Jeon (University of Maryland, College Park, USA), Anthony Ephremides (University of
Maryland at College Park, USA), Marian Codreanu (University of Oulu, Finland), Matti Latva-
aho (UOulu, Finland) .................................................................................................................. 819

Mobile Conductance and Gossip-based Information Spreading in Mobile Networks
Huazi Zhang (Zhejiang University, P.R. China), Zhaoyang Zhang (Zhejiang University, P.R.
China), Huaiyu Dai (NC State University, USA) ........................................................................ 824

Random Matrix Theory

Output Statistics of MIMO Channels with General Input Distribution
Giuseppa Alfano (Politecnico di Torino, Italy), Carla-Fabiana Chiasserini (Politecnico di Torino,
Italy), Alessandro Nordio (IEIIT CNR - Italian National Research Council, Italy), Siyuan Zhou
(Politecnico di Torino, Italy) ......................................................................................................... 829

Spatial Degrees of Freedom of MIMO Systems in Line-of-Sight Environment
Marc Desgroseilliers (EPFL, Switzerland), Olivier Lévêque (EPFL, Switzerland), Emmanuel
Preissmann (EPFL, Switzerland) .................................................................................................. 834

Large Deviation Approach to the Outage Optical MIMO Capacity
Apostolos Karadimitrakis (University of Athens, Greece), Aris Moustakas (University of
Athens, Greece) ........................................................................................................................... 839

Power Optimization on a Random Wireless Network
Aris Moustakas (University of Athens, Greece), Nicholas Bambos (Stanford University, USA) ........ 844
Sparse Signal Recovery

Oblique Pursuits for Compressed Sensing with Random Anisotropic Measurements
Kiryung Lee (University of Illinois at Urbana-Champaign, USA), Yoram Bresler (University of Illinois, Urbana-Champaign, USA), Marius Junge (University of Illinois at Urbana-Champaign, USA) .................................................................................................................. 849

Sparse Signal Recovery via Multipath Matching Pursuit
Suhyuk Kwon (Korea University, Korea), Jian Wang (Korea University, Korea), Byonghyo Shim (Korea University, Korea) .................................................................................................................. 854

Relation between Exact and Robust Recovery for F-minimization: A Topological Viewpoint
Jingbo Liu (Princeton University, USA), Jian Jin (Tsinghua University, P.R. China), Yuantao Gu (Tsinghua University, P.R. China) .................................................................................................................. 859

Recursive Sparse Recovery in Large but Structured Noise - Part 2
Chenlu Qiu (Iowa State University, USA), Namrata Vaswani (Iowa State University, USA) ............. 864

Algebraic Codes 4

Biembeddings of Small Order Hamming STS(n) and APN Monomial Power Permutations
Josep Rifà (Universitat Autònoma de Barcelona, Spain), Faina I Solov’eva (Sobolev Institute of Mathematics, Russia), Merce Villanueva (Universitat Autònoma de Barcelona, Spain) ...................... 869

Sequence Reconstruction for Grassmann Graphs and Permutations
Eitan Yaakobi (Caltech, USA), Moshe Schwartz (Ben-Gurion University of the Negev, Israel), Michael Langberg (Open University of Israel, Israel), Jehoshua Bruck (California Institute of Technology, USA) .................................................................................................................. 874

Rank Spectrum of Propelinear Perfect Binary codes
Faina I Solov’eva (Sobolev Institute of Mathematics, Russia), George Guskov (Sobolev Institute of mathematics, Russia), Ivan Mogilnykh (postgraduate Sobolev Institute of Mathematics, Russia) ................................................................. 879

Generalised Multi-sequence Shift-Register Synthesis using Module Minimisation
Johan S. R. Nielsen (Technical University of Denmark, Denmark) .................................................. 882

Codes for Distributed Storage 2

Repair-Optimal MDS Array Codes over GF(2)
Eyal En Gad (California Institute of Technology, USA), Robert Mateescu (HGST Research, USA), Filip Blagoev (Hitachi Research, USA), Cyril Guyot (Hitachi Global Storage Technologies, USA), Zvonimir Z Bandic (S3RC Research, USA) ................................................................. 887

Locally Repairable Codes with Multiple Repair Alternatives
Lluis Pamies-Juarez (Nanyang Technological University, Singapore), Henk D.L. Hollmann (Nanyang Technological University, Singapore), Frederique Oggier (Nanyang Technological University, Singapore) .................................................................................................................. 892

Polytope Codes for Distributed Storage in the Presence of an Active Omniscient Adversary
Oliver Kosut (Arizona State University, USA) .................................................................................. 897

Distributed Storage Allocations and a Hypergraph Conjecture of Erdős
Yi-Hsuan Kao (University of Southern California, USA), Alexandros Dimakis (University of Texas at Austin, USA), Derek Leong (Institute for Infocomm Research, Singapore), Tracey Ho (California Institute of Technology, USA) .................................................................................................................. 902
Quantum Codes

A family of quantum codes with performances close to the hashing bound under iterative decoding
Denise Maurice (INRIA, France), Jean-Pierre Tillich (INRIA Rocquencourt, France), Iryna Andriyanova (ENSEA/UCP/CNRS, France) ................................................................. 907

Subsystem Codes over Nice Nearrings
Sangjun Lee (Texas A&M University, USA), Andreas Klappenecker (Texas A&M University, USA) .................................................................................................................. 912

Tradeoffs for reliable quantum information storage in surface codes and color codes
Nicolas Delfosse (Ecole Polytechnique, France) ............................................................................................................................ 917

Asymmetric Quantum Codes Detecting a Single Amplitude Error
Martianus Frederic Ezerman (National University of Singapore, Singapore), Markus Grassl (Centre for Quantum Technologies (CQT), Singapore) ................................................................. 922

Capacity Bounds for Broadcast Channels

Capacity Bounds for Wireless Ergodic Fading Broadcast Channels with Partial CSIT
Reza K. Farsani (Institute for Research in Fundamental Sciences (IPM), Iran) ................................................................. 927

The capacity region of a class of two-user degraded compound broadcast channels
Hon Fah Chong (Institute for Infocomm Research, Singapore), Ying-Chang Liang (Institute for Infocomm Research, Singapore) .................................................................................................................. 932

On the Degrees of Freedom Region of General MIMO Broadcast Channel with Mixed CSIT
Bo Yang (Huazhong University of Science and Technology, P.R. China), Desheng Wang (Huazhong University of Science and Technology, P.R. China), Jun Sun (Huazhong University of Science and Technology, P.R. China), Yingzhuang Liu (Huazhong University of Science and Technology, P.R. China) .................................................................................................................. 937

Bounds on the Capacity Region of a Class of Gaussian Broadcast Interference Channels
Yuanpeng Liu (Polytechnic Institute of New York University, USA), Elza Erkip (Polytechnic Institute of NYU, USA) .................................................................................................................. 942

Polar Codes

Fixed-Threshold Polar Codes
Jing Guo (University of Cambridge, United Kingdom), Albert Guillén i Fàbregas (ICREA and Universitat Pompeu Fabra, Spain), Jossy Sayir (University of Cambridge, United Kingdom) ............ 947

On the Construction and Decoding of Concatenated Polar Codes
Hessam Mahdavifar (Samsung Mobile Solutions Lab, USA), Mostafa El-Kamy (Samsung Research America, USA), Jungwon Lee (Samsung US R&D Center, USA), Inyup Kang (Samsung Electronics, USA) .................................................................................................................. 952

A Two Phase Successive Cancellation Decoder Architecture for Polar Codes
Alptekin Pamuk (Bilkent University, Turkey), Erdal Arlander (Bilkent University, Turkey) ................. 957

Index Coding Capacity

On the Capacity Region for Index Coding
Fatemeh Arabjolfaei (UCSD, USA), Bernd Bandemer (University of California, San Diego, USA), Young-Han Kim (UCSD, USA), Eren Şaşoğlu (University of California, San Diego, USA), Lele Wang (UCSD, USA) .................................................................................................................. 962
Delayed CSI

On Cooperative Multiple Access Channels with Delayed CSI
Abdellatif Zaidi (Université Paris-Est Marne La Vallée, France), Shlomo (Shitz) Shamai (The Technion, Israel) ................................................................. 982

Degrees of Freedom of Time-Correlated Broadcast Channels with Delayed CSIT: The MIMO Case
Xinping Yi (EURECOM, France), David Gesbert (Eurecom Institute, France), Sheng Yang (Supélec, France), Mari Kobayashi (Supelec, France) ................................................................. 987

MISO Broadcast Channel with Delayed and Evolving CSIT
Jinyuan Chen (EURECOM, France), Petros Elia (EURECOM, France) ................................................................. 992

On the Fundamental Feedback-vs-Performance Tradeoff over the MISO-BC with Imperfect and Delayed CSIT
Jinyuan Chen (EURECOM, France), Sheng Yang (Supélec, France), Petros Elia (EURECOM, France) ................................................................. 997

Streaming

Robust Streaming Erasure Codes based on Deterministic Channel Approximations
Ahmed Badr (University of Toronto, Canada), Ashish Khisti (University of Toronto, Canada), Wai-tian Tan (Hewlett-Packard, USA), John Apostolopoulos (Hewlett-Packard Labs, USA) .......... 1002

Multi-rate Sequential Data Transmission
Cheuk Ting Li (Stanford University, USA), Shenghao Yang (Tsinghua University, P.R. China), Raymond W. Yeung (The Chinese University of Hong Kong, Hong Kong) ................................................................. 1007

On Coding for Real-Time Streaming under Packet Erasures
Derek Leong (Institute for Infocomm Research, Singapore), Asma Qureshi (California Institute of Technology, USA), Tracey Ho (California Institute of Technology, USA) ................................................................. 1012

Exploiting User Mobility for Wireless Content Delivery
Konstantinos Poularakis (University of Thessaly, Greece), Leandros Tassiulas (University of Thessaly, Greece) ................................................................. 1017

Sparsity

Sparse Phase Retrieval: Convex Algorithms and Limitations
Kishore Jaganathan (Indian Institute of Technology Madras, India), Samet Oymak (California Institute of Technology, USA), Babak Hassibi (California Institute of Technology, USA) ................................................................. 1022

Volume Ratio, Sparsity, and Minimaxity under Unitarily Invariant Norms
Zongming Ma (University of Pennsylvania, USA), Yihong Wu (University of Illinois Urbana-Champaign, USA) ................................................................. 1027
### Algebraic Codes 5

#### Minimax Universal Sampling for Compound Multiband Channels
Yuxin Chen (Stanford University, USA), Andrea Goldsmith (Stanford University, USA), Yonina C. Eldar (Technion-Israel Institute of Technology, Israel) ................................................................. 1032

#### Tractability of Interpretability via Selection of Group-Sparse Models
Nirav Bhan (Ecole Polytechnique Federale de Lausanne, Switzerland), Luca Baldassarre (EPFL, Switzerland), Volkan Cevher (Ecole Polytechnique Federale de Lausanne, Switzerland) ............. 1037

---

#### Incorrigible Set Distributions and Unsuccessful Decoding Probability of Linear Codes
Yong Jiang (Graduate School at Shenzhen, Tsinghua University, P.R. China), Shutao Xia (Tsinghua University, P.R. China), Xinji Liu (Tsinghua University, P.R. China), Fang-Wei Fu (Nankai University, P.R. China) ................................................................. 1042

#### Spherically Punctured Reed-Muller Codes
Olga Kapralova (University of California, Riverside, USA), Ilya Dumer (University of California at Riverside, USA) ........................................................................................................ 1047

#### On Decoding Interleaved Chinese Remainder Codes
Wenhui Li (Ulm University, Germany), Vladimir Sidorenko (Ulm University, Germany), Johan S. R. Nielsen (Technical University of Denmark, Denmark) .................................................................................. 1052

#### Codes for Network Switches
Zhiying Wang (California Institute of Technology, USA), Omer Shaked (Technion – Israel Institute of Technology, Israel), Yuval Cassuto (Technion, Israel), Jehoshua Bruck (California Institute of Technology, USA) .................................................................................. 1057

---

#### Write-Once Memories

#### Retired-Page Utilization in Write-Once Memory - a Coding Perspective
Amit Berman (Technion, Israel), Yitzhak Birk (Technion, Israel) ................................................................. 1062

#### Joint Rewriting and Error Correction in Write-Once Memories
Anxiao Andrew Jiang (Texas A&M University, USA), Yue Li (Texas A&M University, USA), Eyal En Gad (California Institute of Technology, USA), Michael Langberg (Open University of Israel, Israel), Jehoshua Bruck (California Institute of Technology, USA) ................................................................. 1067

#### Constructions of Multiple Error Correcting WOM-code
Hiroshi Kamabe (Gifu University, Japan), Hidetoshi Utsunomiya (Gifu University, Japan) ............. 1072

#### Fundamental Limits of Caching
Mohammad Ali Maddah-Ali (Bell Labs, Alcatel Lucent, USA), Urs Niesen (Bell Labs, Alcatel-Lucent, USA) ........................................................................................................ 1077

---

#### Consensus and Voting

#### Building Consensus via Iterative Voting
Farzad Farnoud (Hassanzadeh) (University of Illinois, Urbana-Champaign, USA), Eitan Yaakobi (Caltech, USA), Behrouz Touri (University of Illinois Urbana-Champaign, USA), Olga Milenkovic (University of Illinois, USA), Jehoshua Bruck (California Institute of Technology, USA) ................................................................. 1082

#### Information-Theoretic Study of Voting Systems
Eitan Yaakobi (Caltech, USA), Michael Langberg (Open University of Israel, Israel), Jehoshua Bruck (California Institute of Technology, USA) ................................................................. 1087

#### Averaging Consensus over Erasure Channels via Local Synchronization
Saber Salehkaleybar (Sharif University of Technology, Iran), S. Jamaloddin Golestani (Sharif University of Technology, Iran) ........................................................................................................ 1092
Gaussian Interference Channel

On the Capacity Region of Gaussian Interference Channels with State
Ruchen Duan (Syracuse University, USA), Yingbin Liang (Syracuse University, USA), Shlomo (Shitz) Shamai (The Technion, Israel) ................................................................. 1097

The GDoF of 3-user MIMO Gaussian interference channel
Jung Hyun Bae (Samsung US R&D Center, USA), Jungwon Lee (Samsung US R&D Center, USA), Inyup Kang (Samsung Electronics, USA) ................................................................. 1102

Unified Secure DoF Analysis of K-User Gaussian Interference Channels
Jianwei Xie (University of Maryland, USA), Sennur Ulukus (University of Maryland, USA) ....... 1107

Interference Canceling Power Control Games in Gaussian Interference Channels
Liang Zhou (Aalto University, Finland), Kalle Ruttik (Aalto University, Finland), Olav Tirkkonen (Aalto University, Finland), Randall Berry (Northwestern University, USA) ................................................................. 1112

Multi-User Polar Codes

A New Polar Coding Scheme for Strong Security on Wiretap Channels
Eren Şaşoğlu (University of California, San Diego, USA), Alexander Vardy (University of California, San Diego, USA) ................................................................. 1117

Successive Cancellation Decoding of Polar Codes for the Two-User Binary-Input MAC
Saygun Onay (Bilkent University, Turkey) ................................................................. 1122

Polar Codes For Broadcast Channels
Naveen Goela (University of California Berkeley, USA), Emmanuel Abbe (Princeton University, USA), Michael Gastpar (EPFL, Switzerland) ................................................................. 1127

Lossless Polar Compression of q-ary Sources
Semih Cayci (Bilkent University, Turkey), Orhan Arikan (Bilkent University, Turkey) ....... 1132

Generalized Index Coding

General Index Coding with Side Information: Three Decoder Case
Sinem Unal (Cornell University, USA), Aaron Wagner (Cornell University, USA) ................................................................. 1137

Pliable Index Coding: The Multiple Requests Case
Siddhartha Brahma (EPFL Switzerland, Switzerland), Christina Fragouli (EPFL, Switzerland) ....... 1142

The Multi-Sender Multicast Index Coding
Lawrence Ong (The University of Newcastle, Australia), Fabian Lim (Massachusetts Institute of Technology, USA), Chin Keong Ho (Institute for Infocomm Research, A*STAR, Singapore) ....... 1147

Local Graph Coloring and Index Coding
Karthikeyan Shanmugam (University of Texas at Austin, USA), Alexandros Dimakis (University of Texas at Austin, USA), Michael Langberg (Open University of Israel, Israel) ....... 1152

Cellular Architectures

Distributed Base Station Cooperation with Finite Alphabet and QoS Constraints
Min Li (Macquarie University, Australia), Chunshan Liu (Macquarie University, Australia), Stephen Hanly (Macquarie University, Australia) ................................................................. 1157

On Layered Transmission in Clustered Cooperative Cellular Architectures
Gil Katz (Technion, Israel), Benjamin Zaidel (University, Israel), Shlomo (Shitz) Shamai (The Technion, Israel) ................................................................. 1162
**Lossy Compression Techniques**

*Approaching the Rate-Distortion Limit by spatial Coupling with Belief Propagation and Decimation*
   Vahid Aref (École Polytechnique Federale de Lausanne, Switzerland), Nicolas Macris (EPFL, Switzerland), Marc Vuffray (EPFL, Switzerland) ................................................................. 1177

*Lossy Compression via Sparse Linear Regression: Computationally Efficient Encoding and Decoding*
   Ramji Venkataramanan (University of Cambridge, United Kingdom), Tuhin Sarkar (Indian Institute of Technology Bombay, India), Sekhar Tatikonda (Yale University, USA) ......................... 1182

*Noise-Shaped Quantization for Nonuniform Sampling*
   Adam Mashiach (Tel-Aviv University, Israel), Ram Zamir (Tel Aviv University, Israel) ................. 1187

**Covariance Estimation and Matrix Completion**

*Adaptive Collaborating Filtering: The Low Noise Regime*
   Onkar Dabeer (Tata Institute of Fundamental Research, India) .................................................. 1197

*Low Separation Rank Covariance Estimation using Kronecker Product Expansions*
   Theodoros Tsiligkaridis (University of Michigan - Ann Arbor, USA), Alfred Hero III (University of Michigan, USA) ................................................................. 1202

*First Order Markov Chain Approximation of Microgrid Renewable Generators Covariance Matrix*
   Navid Tafaghodi Khajavi (University of Hawaii at Manoa, USA), Anthony Kuh (Univ of Hawaii, Manoa, USA) ................................................................. 1207

**Reed-Solomon Codes**

*Reverse Berlekamp-Massey Decoding*
   Jiun-Hung Yu (ETH Zurich, Switzerland), Hans-Andrea Loeliger (ETH Zurich, Switzerland) ........... 1212

*Coding for Combined Block-Symbol Error Correction*
   Ron M. Roth (Technion, Israel), Pascal Vontobel (HP Labs, USA) .............................................. 1217

*Iterative Soft-Decision Decoding of Reed-Solomon Convolutional Concatenated Codes*
   Li Chen (Sun Yat-sen University, P.R. China), Xiao Ma (Sun Yat-sen University, P.R. China) ....... 1222

*On the Dimension of Graph Codes with Reed-Solomon Component Codes*
   Fernando Pinero (Technical University of Denmark, Denmark), Peter Beelen (Technical University of Denmark, Denmark), Jorn Justesen (Retired, USA), Tom Hoeholdt (Technical University of Denmark, Denmark) ........................................... 1227
Distributed Storage Systems

Proactive Content Distribution for Dynamic Content
John Tadrous (Ohio State University, USA), Atilla Eryilmaz (Ohio State University, USA), Hesham El Gamal (Ohio State University, USA) .............................................................. 1232

Non-homogeneous Two-Rack Model for Distributed Storage Systems
Jaume Pernas (Singapore University of Technology and Design, Singapore), Chau Yuen (Singapore University of Technology and Design, Singapore), Bernat Gastón (Universitat Autònoma de Barcelona, Spain), Jaume Pujol (Universitat Autònoma de Barcelona, Spain) ....... 1237

Symmetry in Distributed Storage Systems
Satyajit Thakor (Institute of Network Coding, The Chinese University of Hong Kong, Hong Kong), Terence H. Chan (University of South Australia, Australia), Kenneth W. Shum (Institute of Network Coding, Hong Kong) .................................................................................. 1242

Capacity and Security of Heterogeneous Distributed Storage Systems
Toni Ernvall (University of Turku, Finland), Salim El Rouayheb (Princeton University, USA), Camilla Hollanti (Aalto University, Finland), H. Vincent Poor (Princeton University, USA) ........... 1247

Searching

Fundamental Limits of Identification: Identification rate, search and memory complexity trade-off
Farzad Farhadzadeh (University of Geneva, Switzerland), Frans MJ Willems (Technical University Eindhoven, The Netherlands), Svitoslav Voloshynovskiy (University of Geneva, Switzerland) .......................................................................................................................... 1252

Brute force searching, the typical set and Guesswork
Mark Christiansen (National University of Ireland Maynooth, Ireland), Ken R Duffy (National University of Ireland Maynooth, Ireland), Flávio du Pin Calmon (Massachusetts Institute of Technology, USA), Muriel Médard (MIT, USA) ...................................................................................................................... 1257

Two-Dimensional Visual Search
Mohammad Naghshvar (University of California, San Diego, USA), Tara Javidi (UCSD, USA) ....... 1262

Rate-Reliability-Complexity tradeoff for ML and Lattice decoding of full-rate codes
Arun Kumar Singh (EURECOM, France), Petros Elia (EURECOM, France), Joakim Jaldén (KTH Royal Institute of Technology, Sweden) ........................................................................................................ 1267

Marton’s Achievable Rate Region for Broadcast Channels

Improved cardinality bounds on the auxiliary random variables in Marton’s inner bound
Venkat Anantharam (University of California at Berkeley, USA), Amin Aminzadeh Gohari (Sharif University of Technology, Iran), Chandra Nair (Chinese University of Hong Kong, Hong Kong) .................................................................................................................. 1272

Achievable rate region for three user discrete broadcast channel based on coset codes
Arun Padakandla (University of Michigan, USA), Sandeep Pradhan (University Michigan, USA) .... 1277

Marton-Marton coding for a broadcast relay network
Lanying Zhao (KAIST, Korea), Sae-Young Chung (KAIST, Korea) .................................................. 1282

A Technique for Deriving One-Shot Achievability Results in Network Information Theory
Mohammad Hossein Yassaei (Sharif University of Technology, Iran), Mohammad Reza Aref (Sharif University of Tech., Iran), Amin Aminzadeh Gohari (Sharif University of Technology, Iran) .................................................................................................................. 1287
Nonbinary Polar Codes

Polar Lattices: Where Arikan Meets Forney
Yanfei Yan (Imperial College London, United Kingdom), Cong Ling (Imperial College London, United Kingdom), Xiaofu Wu (Nanjing University of Posts and Telecommunications, P.R. China) ........................................................................................................................................ 1292

Polarization theorems for Arbitrary DMCs
Rajai Nasser (École Polytechnique Fédérale de Lausanne, Switzerland), Emre Telatar (EPFL, Switzerland) ........................................................................................................................................ 1297

Multilevel Polar-Coded Modulation
Mathis Seidl (University of Erlangen-Nuremberg, Germany), Andreas Schenk (University of Erlangen-Nuremberg, Germany), Clemens Stierstorfer (University of Erlangen-Nuremberg, Germany), Johannes Huber (University of Erlangen-Nuremberg, Germany) ............................................................................................................. 1302

Controlled polarization for q-ary alphabets
Woomyoung Park (University of Maryland, USA), Alexander Barg (University of Maryland, USA) ........................................................................................................................................ 1307

Two-Way Relay

Lattice Coding for the Two-way Two-relay Channel
Yiwei Song (University of Illinois at Chicago, USA), Natasha Devroye (University of Illinois at Chicago, USA), Huai-rong Shao (Samsung Electronics, USA), Chiu Ngo (Samsung Electronics, USA) ........................................................................................................................................ 1312

Asymptotic Sum-Capacity of MIMO Two-Way Relay Channels within 1/2log5/4 Bit per User-Antenna
Xiaojun Yuan (The Chinese University of Hong Kong, Hong Kong), Tao Yang (CSIRO, Australia) ........................................................................................................................................ 1317

Scalar Quantize-and-Forward for Symmetric Half-duplex Two-Way Relay Channels
Michael Heindlmaier (Technische Universität München, Germany), Onurcan İşcan (Technische Universität München, Germany), Christopher Rosanka (Rohde & Schwarz, Germany) ............................................................................................................. 1322

Joint Opportunistic Scheduling and Network Coding for Bidirectional Relay Channel
Mohammad Shaqfeh (Texas A&M University at Qatar, Qatar), Ammar Zafar (King Abdullah University of Science and Technology (KAUST), Saudi Arabia), Hussein Alnuweiri (Texas A&M University, Qatar), Mohamed-Slim Alouini (King Abdullah University of Science and Technology (KAUST), Saudi Arabia) ............................................................................................................. 1327

Wiretap Channel

A Statistical Physics Approach to the Wiretap Channel
Iñaki Esnaola (Princeton University, USA), Antonia Tulino (Bell Labs, USA), H. Vincent Poor (Princeton University, USA) ........................................................................................................................................ 1332

Secure Degrees of Freedom of the Gaussian Multiple Access Wiretap Channel
Jianwei Xie (University of Maryland, USA), Sennur Ulukus (University of Maryland, USA) ........................................................................................................................................ 1337

Capacity Results, Coordination Resources, and Super-Activation in Wiretap Channels
Holger Boche (Technical University Munich, Germany), Rafael F. Schaefer (Technische Universität München, Germany) ........................................................................................................................................ 1342

Fading Wiretap Channel with No CSI Anywhere
Pritam Mukherjee (University of Maryland, USA), Sennur Ulukus (University of Maryland, USA) ........................................................................................................................................ 1347
Lossy Distributed Source Coding

The Zero-Delay Wyner-Ziv Problem
Yonatan Kaspi (Technion, Israel Institute of Technology, Israel), Neri Merhav (Technion, Israel) ................................................................. 1352

Universal Wyner-Ziv Coding for Distortion Constrained General Side-Information
Shun Watanabe (Tokushima University, Japan), Shigeaki Kuzuoka (Wakayama University, Japan) ................................................................. 1357

Distributed source coding in absence of Common Components
Farhad Shirani Chaharsooghi (University of Michigan, USA), Aria Ghasemian Sahebi (University of Michigan, USA), Sandeep Pradhan (University of Michigan, USA) ............................................. 1362

On the Role of Common Codewords in Quadratic Gaussian Multiple Descriptions Coding
Kumar Viswanatha (UCSB, USA), Emrah Akyol (UCSB, USA), Kenneth Rose (University of California, Santa Barbara, USA) .................................................................................... 1367

A Perturbation Proof of the Vector Gaussian One-Help-One Problem
Yinfei Xu (Southeast University, P.R. China), Qiao Wang (Southeast University, P.R. China) ...... 1372

Learning and Denoising

Denoising as well as the best of any two denoisers
Erik Ordentlich (Hewlett-Packard Laboratories, USA) ....................................................................................... 1377

Noisy Subspace Clustering via Thresholding
Reinhard Heckel (ETH Zürich, Switzerland), Helmut Bölcskei (ETH Zurich, Switzerland) .............. 1382

A Universal Probability Assignment for Prediction of Individual Sequences
Yuval Lomnitz (Tel Aviv University, Israel), Meir Feder (Tel-Aviv University, Israel) ..................... 1387

Time-series information and learning
Daniil Ryabko (INRIA Lille-Nord Europe, France) ....................................................................................... 1392

Topics in Coding

Least Squares Superposition Codes with Bernoulli Dictionary are Still Reliable at Rates up to Capacity
Yoshinari Takeishi (Kyushu University, Japan), Masanori Kawakita (Kyushu University, Japan), Junichi Takeuchi (Kyushu University, Japan) ................................................................. 1396

On Chebyshev radius of a set in Hamming space and the closest string problem
Arya Mazumdar (University of Minnesota, USA), Yury Polyanskiy (MIT, USA), Barna Saha (AT&T Shannon Laboratories, USA) ....................................................................................... 1401

Analysis and Practice of Uniquely Decodable One-to-One Code
Chin-Fu Liu (National Chiao Tung University, Taiwan), Hsiao-feng Francis Lu (National Chiao Tung University, Taiwan), Po-Ning Chen (National Chiao Tung University, Taiwan) ................................................................. 1406

Efficient determination of the unique decodability of a string
Arnold Filtser (Ben-Gurion University, Israel), Jiaxi Jin (Boston University, USA), Aryeh Kontorovich (Ben-Gurion University, Israel), Ari Trachtenberg (Boston University, USA) ...................... 1411

Achieving the AWGN Channel Capacity With Lattice Gaussian Coding
Cong Ling (Imperial College London, United Kingdom), Jean-Claude Belfiore (Ecole Nationale Supérieure des Télécommunications, France) ....................................................................................... 1416
Regenerating Codes for Distributed Storage

The Secrecy Capacity of Minimum Bandwidth Cooperative Regenerating Codes
Onur Ozan Koyluoglu (The University of Texas at Austin, USA), Ankit Singh Rawat (The University of Texas at Austin, USA), Sriram Vishwanath (University of Texas at Austin, USA) ........................................... 1421

Rate Region of the (4,3,3) Exact-Repair Regenerating Codes
Chao Tian (AT&T Labs-Research, Shannon Laboratory, USA) ................................................................. 1426

Exact-Repair Regenerating Codes Via Layered Erasure Correction and Block Designs
Chao Tian (AT&T Labs-Research, Shannon Laboratory, USA), Vaneet Aggarwal (AT&T Labs - Research, USA), Vinay A. Vaishampayan (AT&T Labs - Research, USA) ................................................ 1431

Update-Efficient Regenerating Codes with Minimum Per-Node Storage
Yunghsiang Sam Han (National Taiwan University of Science and Technology, Taiwan), Hung-Ta Pai (National Taipei University, Taiwan), Rong Zheng (McMaster University, Canada), Pramod Varshney (Syracuse University, USA) ............................................................................................ 1436

Repairing Multiple Failures in the Suh-Ramchandran Regenerating Codes
Junyu Chen (The Chinese University of Hong Kong, Hong Kong), Kenneth W. Shum (Institute of Network Coding, Hong Kong) ........................................................................................................... 1441

Bounds on the Capacity of Wireless Networks

On the achievable region with point-to-point codes for generalized interference networks
Jung Hyun Bae (Samsung US R&D Center, USA), Jungwon Lee (Samsung US R&D Center, USA), Inyup Kang (Samsung Electronics, USA) .............................................................................................................. 1446

Information Theoretic Cut-set Bounds on the Capacity of Poisson Wireless Networks
Georgios Rodolakis (ITI, CERTH, Greece) ........................................................................................................... 1451

Lower Bounding Models for Wireless Networks
Jinfeng Du (Royal Institute of Technology (KTH), Sweden), Muriel Médard (MIT, USA), Ming Xiao (Royal Institute of Technology, Sweden), Mikael Skoglund (KTH Royal Institute of Technology, Sweden) ........................................................................................................ 1456

Optimal Throughput-Outage Trade-off in Wireless One-Hop Caching Networks
Mingyue Ji (University of Southern California, USA), Giuseppe Caire (University of Southern California, USA), Andreas Molisch (University of Southern California, USA) .............................................................. 1461

Capacity of Multiple Access Channels

Multiple Access Channel with State Uncertainty at Transmitters
Shaofeng Zou (Syracuse University, USA), Yingbin Liang (Syracuse University, USA), Shlomo (Shitz) Shamai (The Technion, Israel) ............................................................................................................... 1466

On the Adaptive Sum-Capacity of Fading MACs with Distributed CSI and Non-identical Links
Sreejith Sreekumar (IIT Bombay, India), Bikash K Dey (Indian Institute of Technology Bombay, India), Sibi Raj B Pillai (IIT Bombay, India) ........................................................................................................ 1471

The capacity region of three user Gaussian inverse-compute-and-forward channels
Yanying Chen (University of Illinois at Chicago, USA), Yiwei Song (University of Illinois at Chicago, USA), Natasha Devroye (University of Illinois at Chicago, USA) .............................................................................. 1476

On Orthogonal Signalling in Gaussian Multiple Access Channel With Peak Constraints
Kamyar Moshksar (University of Waterloo, Canada), Babak Mamandipoor (University of Waterloo, Canada), Amir K. Khandani (University of Waterloo, Canada) ........................................................................... 1481
LP Decoding

Linear Programming Decoding of Spatially Coupled Codes
Badih Ghazi (Massachusetts Institute of Technology, USA), Louay Bazzi (American University of Beirut, Lebanon), Ruediger Urbanke (EPFL, Switzerland) .......................................................... 1486

Towards Combinatorial LP Turbo Decoding
Michael Helmling (University of Koblenz-Landau, Campus Koblenz, Germany), Stefan Ruzika (University of Koblenz-Landau, Germany) ........................................................................................................ 1491

Improved Linear Programming Decoding using Frustrated Cycles
Shrinivas Kudekar (Qualcomm Research, USA), Jason K Johnson (Los Alamos National Laboratory, USA), Michael Chertkov (Los Alamos National Laboratory, USA) ........................................ 1496

Efficient Iterative LP Decoding of LDPC Codes with Alternating Direction Method of Multipliers
Xiaojie Zhang (University of California, San Diego, USA), Paul H. Siegel (University of California, San Diego, USA) ......................................................................................................................... 1501

MDL, Distribution Matching and Random Number Generation

Second Order Asymptotics for Random Number Generation
Wataru Kumagai (Tohoku University, Japan), Masahito Hayashi (Nagoya University, Japan) ......... 1506

Fixed-to-Variable Length Distribution Matching
Rana Ali Amjad (Technische Universität München, Germany), Georg Böcherer (Technische Universität München, Germany) .............................................................. 1511

Extendable MDL
Peter Harremoës (Niels Brock, Copenhagen Business College, Denmark) ...................................... 1516

Minimum Description Length Principle for Maximum Entropy Model Selection
Gaurav Pandey (Indian Institute of Science, India), Ambedkar Dukkipati (Indian Institute of Science, India) ......................................................................................................................... 1521

Finite Blocklength Analysis 1

Bounds on the Second-Order Coding Rate of the MIMO Rayleigh Block-Fading Channel
Jakob Hoydis (Alcatel-Lucent Bell Labs, Germany), Romain Couillet (Supélec, France), Pablo Piantanida (SUPELEC, France) .................................................................................................. 1526

Quasi-Static SIMO Fading Channels at Finite Blocklength
Wei Yang (Chalmers University of Technology, Sweden), Giuseppe Durisi (Chalmers University of Technology, Sweden), Tobias Koch (Universidad Carlos III de Madrid, Spain), Yury Polyanskiy (MIT, USA) .............................................................. 1531

A Tight Upper Bound for the Third-Order Asymptotics of Discrete Memoryless Channels
Marco Tomamichel (National University of Singapore, Singapore), Vincent Y. F. Tan (Institute for Infocomm Research, Singapore) .......................................................... 1536

Asymptotic Neyman-Pearson Games for Converse to the Channel Coding Theorem
Pierre Moulin (University of Illinois at Urbana-Champaign, USA) ............................................ 1541

Cryptography and Information Theory 1

The Kraft inequality for EPS systems
Chinthani Uduwerelle (University of South Australia, Australia), Terence H. Chan (University of South Australia, Australia), Siu-Wai Ho (University of South Australia, Australia) .......... 1546

A New Sub-packetization Bound for Minimum Storage Regenerating Codes
Sreechakra Goparaju (Princeton University, USA), Robert Calderbank (Duke University, USA) ..... 1616

BASIC Regenerating Code: Binary Addition and Shift for Exact Repair
Hanxu Hou (Peking University, P.R. China), Kenneth W. Shum (Institute of Network Coding, Hong Kong), Minghua Chen (The Chinese University of Hong Kong, P.R. China), Hui Li (Shenzhen Graduate School, Peking University, P.R. China) ................................................................. 1621

DNA Sequencing

PREMIER - PRobabilistic Error-correction using Markov Inference in Errored Reads
Xin Yin (Iowa State University, USA), Zhao Song (Iowa State University, USA), Karin S. Dorman (Iowa State University, USA), Aditya Ramamoorthy (Iowa State University, USA) ............ 1626

Message Passing Algorithm for Inferring Consensus Sequence from Next-Generation Sequencing Data
Xiaohu Shen (The University of Texas at Austin, USA), Shamaiah Manohar (The University of Texas at Austin, USA), Haris Vikalo (The University of Texas at Austin, USA) ............................................ 1631

Reference-Based DNA Shotgun Sequencing: Information Theoretic Limits
Soheil Mohajer (UC Berkeley, USA), Abolfazl Motahari (University of California, Berkeley, Canada), David Tse (University of California at Berkeley, USA) ....................................................... 1635

Optimal DNA shotgun sequencing: Noisy reads are as good as noiseless reads
Abolfazl Motahari (University of California, Berkeley, Canada), Kannan Ramchandran (University of California at Berkeley, USA), David Tse (University of California at Berkeley, USA), Nan Ma (University of California at Berkeley, USA) ................................................................. 1640

Variations on the MAC

Reliable Uncoded Communication in the SIMO MAC via Low-Complexity Decoding
Mainak Chowdhury (Stanford University, USA), Andrea Goldsmith (Stanford University, USA), Tsachy Weissman (Stanford University, USA) ................................................................. 1645

Converse Coding Theorems for Identification via Multiple Access Channels
Yasutada Oohama (University of Electro-Communications, Japan) ......................................................... 1650

Generalized Construction of Signature Code for Multiple-Access Adder Channel
Shan Lu (Doshisha University, Japan), Jun Cheng (Doshisha University, Japan), Wei Hou (Doshisha University, Japan), Yoichiro Watanabe (Doshisha University, Japan) ........................................ 1655

Achievable Rate Regions of Cognitive Multiple Access Channel with Sensing Errors
Gozde Ozcan (Syracuse University, USA), M. Cenk Gursoy (Syracuse University, USA) ........... 1660

Distributed Cognitive Multiple Access Networks: Power Control, Scheduling and Multiuser Diversity
Ehsan Nekouei (University of Melbourne, Australia), Hazer Inaltekin (Antalya International University, Turkey), Subhrakanti Dey (Uppsala University, Sweden) ................................................................. 1665

Construction of LDPC Codes

Minimum Distance Distribution of Irregular Generalized LDPC Code Ensembles
Ian P Mulholland (University College Dublin, Ireland), Mark F. Flanagan (University College Dublin, Ireland), Enrico Paolini (University of Bologna, Italy) ................................................................. 1670

New results on Construction A Lattices based on Very Sparse Parity-Check Matrices
Nicola di Pietro (Institut de Mathématiques de Bordeaux, France), Gilles Zémor (Université Bordeaux 1, France), Joseph Jean Boutros (Texas A&M University at Qatar, Qatar) ..................... 1675
Deterministic Constructions for Large Girth Protograph LDPC Codes
Asit Kumar Pradhan (Indian Institute of Technology Madras, India), Arunkumar Subramanian (Georgia Institute of Technology, USA), Andrew Thangaraj (IIT Madras, India) .................................................. 1680

Correcting Combinations of Errors and Erasures with Euclidean Geometry LDPC Codes
Qiuju Diao (University of California, Davis, USA), Ying Y. Tai (SanDisk Corporation, USA), Shu Lin (UC Davis, USA), Khaled Abdel-Ghaffar (University of California, USA) .................................................. 1685

Asymptotic analysis of LDPC codes with depth-2 connectivity distributions over BEC
Min Jang (Sungkyunkwan University, Korea), Jin Whan Kang (Sungkyunkwan University, Korea), Jong-hwan Kim (Sungkyunkwan University, Korea), Sang-Hyo Kim (Sungkyunkwan University, Korea) ............................................................................................................. 1690

Optical Channels

Square Root Approximation to the Poisson Channel
Anagnostis Tsiatmas (Eindhoven University of Technology, The Netherlands), Frans MJ Willems (Technical University Eindhoven, The Netherlands), Stan Baggen (Philips, The Netherlands) .......................................................... 1695

A General Upper Bound for FSO Channel Capacity with Input-Dependent Gaussian Noise and the Corresponding Optimal Input Distribution
Kobra Akbari Dadamahalleh (Sadjad Institute for Higher Education, Iran), Ghosheh Abed Hdtani ( Ferdowsi University of Mashhad, Mashhad, Iran) ............................................................................................................. 1700

Integrable Communication Channels and the Nonlinear Fourier Transform
Mansoor Isvand Yousefi (University of Toronto, Canada), Frank R. Kschischang (University of Toronto, Canada) ............................................................................................................. 1705

Communication over Fiber-optic Channels using the Nonlinear Fourier Transform
Mansoor Isvand Yousefi (University of Toronto, Canada), Frank R. Kschischang (University of Toronto, Canada) ............................................................................................................. 1710

Quantum Noise Limited Optical Communication with Low Probability of Detection
Boulat Bash (University of Massachusetts, USA), Saikat Guha (Raytheon BBN Technologies, USA), Dennis Goeckel (University of Massachusetts, USA), Don Towsley (University of Massachusetts at Amherst, USA) ............................................................................................................. 1715

Finite Blocklength Analysis 2

Converse Bounds for Assorted Codes in the Finite Blocklength Regime
Yanina Shkel (University of Wisconsin-Madison, USA), Vincent Y. F. Tan (Institute for Infocomm Research, Singapore), Stark C Draper (University of Wisconsin, USA) .................................................. 1720

The Importance of Tie-Breaking in Finite-Blocklength Bounds
Eli Haim (Tel-Aviv University, Israel), Yuval Kochman (The Hebrew University of Jerusalem, Israel), Uri Erez (Tel Aviv University, Israel) ............................................................................................................. 1725

The Meta-Converse Bound is Tight
Gonzalo Vazquez-Vilar (Universitat Pompeu Fabra, Spain), Adrià Tauste Campo (Universitat Pompeu Fabra, Spain), Albert Guillén i Fàbregas (ICREA and Universitat Pompeu Fabra, Spain), Alfonso Martinez (Universitat Pompeu Fabra, Spain) ............................................................................................................. 1730

Channels with cost constraints: strong converse and dispersion
Victoria Kostina (Princeton University, USA), Sergio Verdú (Princeton University, USA) ........................................ 1734
Lossless Compression

Optimal Lossless Compression: Source Varentropy and Dispersion
Ioannis Kontoyiannis (Athens UniversityEcon & Business, Greece), Sergio Verdú (Princeton University, USA) ................................................................. 1739

Lossless Compression with Moderate Error Probability
Yucel Altuğ (Cornell University, USA), Aaron Wagner (Cornell University, USA), Ioannis Kontoyiannis (Athens UniversityEcon & Business, Greece) ..................................................................................... 1744

On the Redundancy of Huffman Codes with Exponential Objectives
Michael B. Baer (Vista Research, USA) ......................................................................................................................... 1749

On Antidictionary Coding Based on Compacted Substring Automaton
Takahiro Ota (Nagano Prefectural Institute of Technology, Japan), Hiroyoshi Morita (University of Electro-Communications, Japan) ........................................................................................................ 1754

Almost Instantaneous FV Codes
Hirosuke Yamamoto (The University of Tokyo, Japan), Xiaofeng Wei (The University of Tokyo, Japan) ........................................................................... 1759

Degrees of Freedom 2

Two-user MISO Broadcast Channel: Synergistic Benefits of Alternating CSIT
Ravi Tandon (Virginia Tech, USA), Syed Ali Jafar (University of California Irvine, USA), Shlomo (Shitz) Shamai (The Technion, Israel), H. Vincent Poor (Princeton University, USA) ......... 1764

Generalized Degrees of Freedom for Network-Coded Cognitive Interference Channel
SongNam Hong (University of Southern California, USA), Giuseppe Caire (University of Southern California, USA) ........................................................................................................... 1769

Degrees of Freedom of MIMO Cellular Networks With Two Cells and Two Users Per Cell
Gokul Sridharan (University of Toronto, Canada), Wei Yu (University of Toronto, Canada) ...... 1774

Generalized Degrees of Freedom Region for MIMO Interference Channel With Feedback
Mehdi Ashraphijuo (Columbia University, USA), Vaneet Aggarwal (AT&T Labs - Research, USA), Xiaodong Wang (Columbia University, USA) .................................................................................. 1779

Energy Harvesting 2

Optimal Scheduling for Energy Harvesting Transmitters with Hybrid Energy Storage
Omur Ozel (University of Maryland, College Park, USA), Khurram Shahzad (University of Maryland, College Park, USA), Sennur Ulukus (University of Maryland, USA) ................................................................. 1784

On the Capacity of a Communication System with Energy Harvesting and a Limited Battery
Wei Mao (California Institute of Technology, USA), Babak Hassibi (California Institute of Technology, USA) ............................................................................................................. 1789

Delay-Constrained Distortion Minimization for Energy Harvesting Transmission over a Fading Channel
Oner Orhan (Polytechnic Institute of NYU, USA), Deniz Gündüz (Imperial College London, United Kingdom), Elza Erkip (Polytechnic Institute of NYU, USA) ................................................................. 1794

Energy Harvesting Receivers: Finite Battery Capacity
Hajar Mahdavi-Doost (Rutgers University, USA), Roy Yates (Rutgers University, USA) ............... 1799
### Codes for Distributed Storage

**Quasi-Cyclic Regenerating Codes for Distributed Storage: Existence and Near-MSR Examples**
Vignesh G (Indian Institute of Technology Madras, India), Andrew Thangaraj (IIT Madras, India) .......................................................... 1804

**Robust Multiple Description Coding - Joint coding for source and storage**
Terence H. Chan (University of South Australia, Australia), Siu-Wai Ho (University of South Australia, Australia) ................................................................................................................. 1809

**Optimal Locally Repairable Codes and Connections to Matroid Theory**
Itzhak Tamo (University of Maryland, USA), Dimitris Papailiopoulos (University of Texas at Austin, USA), Alexandros Dimakis (University of Texas at Austin, USA) ....................................... 1814

**Optimal Locally Repairable Codes via Rank-Metric Codes**
Natalia Silberstein (The University of Texas at Austin, USA), Ankit Singh Rawat (The University of Texas at Austin, USA), Onur Ozan Koyluoglu (The University of Texas at Austin, USA), Sriram Vishwanath (University of Texas at Austin, USA) ................................................................. 1819

### Bio-Inspired Channels

**Energy Efficient Neurons with Generalized Inverse Gaussian Conditional and Marginal Hitting Times**
Jie Xing (University of Virginia, USA), Toby Berger (University of Virginia, USA) ......................... 1824

**On the Capacity-achieving Input for Additive Inverse Gaussian Channels**
Hui Li (University of Science and Technology of China, P.R. China), Dongning Guo (Northwestern University, USA) ...................................................................................................................... 1829

**Capacity of a Simple Intercellular Signal Transduction Channel**
Andrew Eckford (York University, Canada), Peter J Thomas (Case Western Reserve University, USA) .............................................................................................................................. 1834

**Signaling with Identical Tokens: lower bounds with energy constraints**
Christopher Rose (WINLAB at Rutgers University, USA), I. Saira Mian (LBNL, USA) .................. 1839

**Relaying in Diffusion-Based Molecular Communication**
Arash Einolghozati (Georgia Tech, USA), Mohsen Sardari (Georgia Institute of Technology, USA), Faramarz Fekri (Georgia Institute of Technology, USA) ......................................................... 1844

### Multi-Terminal in the Finite Blocklength Regime

**Non-Asymptotic Output Statistics of Random Binning and Its Applications**
Mohammad Hossein Yassaei (Sharif University of Technology, Iran), Mohammad Reza Aref (Sharif University of Tech., Iran), Amin Aminzadeh Gohari (Sharif University of Technology, Iran) ....................................................................................................................... 1849

**On the Dispersions of the Discrete Memoryless Interference Channel**
Sy-Quoc Le (National University of Singapore, Singapore), Vincent Y. F. Tan (Institute for Infocomm Research, Singapore), Mehul Motani (National University of Singapore, Singapore) ...... 1859

**An Improved Bound on Information Loss due to Finite Block Length in a Gaussian Line Network**
Ramanan Subramanian (University of South Australia, Australia), Badri N Vellambi (University of South Australia, Australia), Ingmar Land (University of South Australia, Australia) ......................... 1864

### Spatial Coupling 1

**Coded Cooperation Using Rate-Compatible Spatially-Coupled Codes**
Lai Wei (University of Notre Dame, USA), Daniel J. Costello, Jr. (University of Notre Dame, USA), Thomas E Fuja (University of Notre Dame, USA) ................................................................. 1869
### MDS Codes and the Singleton Bound

**On the Minimum Distance of Generalized Spatially Coupled LDPC Codes**  
David G. M. Mitchell (University of Notre Dame, USA), Michael Lentmaier (Lund University, Sweden), Daniel J. Costello, Jr. (University of Notre Dame, USA)  
1874

**Performance Bounds for Spatially-Coupled LDPC Codes over the Block Erasure Channel**  
Alan Jule (ENSEA/UCP/CNRS, France), Iryna Andriyanova (ENSEA/UCP/CNRS, France)  
1879

**Universal Multiple Access via Spatially Coupling Data Transmission**  
Dmitri Truhachev (University of Alberta, Canada)  
1884

---

**Balanced Sparsest Generator Matrices for MDS Codes**  
Hoang Dau (Singapore University of Technology and Design, Singapore), Wentu Song (Peking University, P.R. China), Zheng Dong (Singapore University of Technology and Design, Singapore), Chau Yuen (Singapore University of Technology and Design, Singapore)  
1889

**Separating Redundancy of Linear MDS Codes**  
Khaled Abdel-Ghaffar (University of California, USA), Jos H. Weber (Delft University of Technology, The Netherlands)  
1894

**New Pattern Erasure Codes**  
Lin Sheng (Tianjin University of Technology, P.R. China), Kai Shi (Tianjin University of Technology, P.R. China), Douglas Stones (Monash University, Australia), Guangping Xu (Tianjin University of Technology, P.R. China), Wang Jinsong (Tianjin University of Technology, P.R. China)  
1899

**A Lattice Singleton Bound**  
Srikanth B Pai (Indian Institute of Science, India), B. Sundar Rajan (Indian Institute of Science, India)  
1904

### Source Coding and Statistics

**Universal Coding in Order Structures and Isotone Regression**  
Flemming Topsøe (University of Copenhagen, Denmark)  
1909

**Redundancy Analysis in Lossless Compression of a Binary Tree Via its Minimal DAG Representation**  
Jie Zhang (Avoca Technology Inc, Canada), En-hui Yang (University of Waterloo, Canada), John C Kieffer (University of Minnesota, USA)  
1914

**Average Redundancy of the Shannon Code for Markov Sources**  
Neri Merhav (Technion, Israel), Wojciech Szpankowski (Purdue University, USA)  
1919

**Space-efficient representation of truncated suffix trees, with applications to Markov order estimation**  
Luciana Vitale (Universidad de la Republica, Uruguay), Álvaro Martín (Universidad de la República, Uruguay), Gadiel Seroussi (Hewlett-Packard Laboratories, USA)  
1924

### Communication Networks: Scheduling, Probing

**A Randomized Probing Scheme for Increasing the Stability Region of Multicarrier Systems**  
Apostolos Destounis (Alcatel-Lucent Bell Labs France, France), Mohamad Assaad (Supelec, France), Mérouane Debbah (Supelec, France), Bessem Sayadi (Alcatel-Lucent Bell-Labs, France)  
1929

**Channel Probing in Communication Systems: Myopic Policies Are Not Always Optimal**  
Matthew Johnston (Massachusetts Institute of Technology, USA), Eytan Modiano (MIT, USA), Isaac Keslassy (Technion, Israel)  
1934
Secrecy in Wireless Systems

Secrecy capacity region of a class of two-user Gaussian MIMO BC with degraded message sets
Hon Fah Chong (Institute for Infocomm Research, Singapore), Ying-Chang Liang (Institute for Infocomm Research, Singapore) ........................................ 2009

Probability Bounds for an Eavesdropper’s Correct Decision over a MIMO Wiretap Channel
David Karpuk (Aalto University, Finland), Iván Blanco Chacón (Aalto University, Spain), Camilla Hollanti (Aalto University, Finland) ........................................................................ 2014

Further Results on Optimal Signaling over Secure MIMO Channels
Sergey Loyka (University of Ottawa, Canada), Charalampos D Charalambous (University of Cyprus, Cyprus) .................................................................................. 2019

On Secrecy Outage Capacity of Fading Channels Under Relaxed Delay Constraints
Onur Gungor (The Ohio State University, USA), Can Emre Koksal (The Ohio State University, USA), Hesham El Gamal (Ohio State University, USA) ........................................ 2024

On the Capacity of Interference Channels

The K-User Interference Channel: Strong Interference Regime
Reza K. Farsani (Institute for Research in Fundamental Sciences (IPM), Iran) .......................... 2029

On the K-user Cognitive Interference Channel with Cumulative Message Sharing Sum-Capacity
Diana Maamari (University of Illinois At Chicago, USA), Daniela Tuninetti (University of Illinois at Chicago, USA), Natasha Devroye (University of Illinois at Chicago, USA) ........................................ 2034

On the Capacity of Interference Channels with Partial Codebook Knowledge
Alex R Dytso (University of Illinois at Chicago, USA), Natasha Devroye (University of Illinois at Chicago, USA), Daniela Tuninetti (University of Illinois at Chicago, USA) ........................................ 2039

On the Capacity of the State-Dependent Cognitive Interference Channel
Mohammad Kazemi (University of Rochester, USA), Azadeh Vosoughi (University of Central Florida, USA) ........................................................................................................ 2044

A New Outer Bound on the Capacity Region of a Class of Z-interference Channels
Nan Liu (Southeast University, P.R. China), Wei Kang (Southeast University, P.R. China) ........ 2049

Parity-Check Codes and Decoding Algorithms

Obtaining Extra Coding Gain for Short Codes by Block Markov Superposition Transmission
Xiao Ma (Sun Yat-sen University, P.R. China), Chulong Liang (Sun Yat-sen University, P.R. China), Kechao Huang (Sun Yat-sen University, P.R. China), Qitao Zhuang (Sun Yat-sen University, P.R. China) .......................................................... 2054

Pseudocodewords from Bethe Permanents
Roxana Smarandache (University of Notre Dame, USA) .......................................................... 2059

Anytime Reliable LDPC Convolutional Codes for Networked Control over Wireless Channel
Alberto Tarable (Politecnico di Torino, Italy), Alessandro Nordio (IEIIT CNR - Italian National Research Council, Italy), Fabrizio Dabbene (Politecnico di Torino, Italy), Roberto Tempo (Politecnico di Torino, Italy) ......................................................................................... 2064
MDPC-McEliece: New McEliece Variants from Moderate Density Parity-Check Codes
Rafael Misoczki (Project SECRET, INRIA-Rocquencourt, France), Jean-Pierre Tillich (INRIA Rocquencourt, France), Nicolas Sendrier (INRIA, France), Paulo S. L. M. Barreto (University of São Paulo, Brazil) 2069

On the Capacity of Fading Channels

Rate Maximization of Multilayer Transmission over Rayleigh Fading Channels
Wessam Mesbah (King Fahd University of Petroleum and Minerals, Saudi Arabia), Mohammad Shaqfeh (Texas A&M University at Qatar, Qatar), Hussein Alnuweiri (Texas A&M University, Qatar) 2074

Characterization and Optimization of the Constrained Capacity of Coherent Fading Channels
Driven by Arbitrary Inputs: A Mellin Transform Based Asymptotic Approach
Alberto Gil Couto Pimentel Ramos (University of Cambridge, United Kingdom), Miguel Raul Dias Rodrigues (University College London, United Kingdom) 2079

Generic Correlation Increases Noncoherent MIMO Capacity
Günther Koliander (Vienna University of Technology, Austria), Erwin Riegler (Vienna University of Technology (VUT), Austria), Giuseppe Durisi (Chalmers University of Technology, Sweden), Franz Hlawatsch (Vienna University of Technology, Austria) 2084

Sharpened Capacity Lower Bounds of Fading MIMO Channels with Imperfect CSI
Adriano Pastore (Universitat Politècnica de Catalunya, Spain), Jakob Hoydis (Alcatel-Lucent Bell Labs, Germany), Javier R. Fonollosa (Universitat Politècnica de Catalunya - Barcelona Tech (UPC), Spain) 2089

Information Regular and ψ-Mixing Channels
Martin Mittelbach (Dresden University of Technology, Germany), Eduard Jorswieck (Dresden University of Technology, Germany) 2094

Markov Models and Finite State Channels

Non-linear smoothers for discrete-time, finite-state Markov chains
Daphney-Stavroula Zois (University of Southern California, USA), Marco Levorato (Stanford University, USA), Urbashi Mitra (University of Southern California, USA) 2099

Estimation in slow mixing, long memory channels
Meysam Asadi (University of Hawaii at Manoa, USA), Ramezan Paravi Torghabeh (University of Hawaii at Manoa, USA), Narayana Prasad Santhanam (University of Hawaii at Manoa, USA) 2104

A Randomized Approach to the Capacity of Finite-State Channels
Guangyue Han (University of Hong Kong, Hong Kong) 2109

Concavity of Mutual Information Rate of Finite-State Channels
Yonglong Li (The University of Hong Kong, Hong Kong), Guangyue Han (University of Hong Kong, Hong Kong) 2114

Scheduling, Stabilizing and Discovering

Stabilizing Multi-Channel Slotted Aloha for Machine-Type Communications
Olga Galinina (Tampere University of Technology, Finland), Andrey Turlakov (Saint-Petersburg State University of Aerospace Instrumentation, Russia), Sergey Andreev (Tampere University of Technology, Finland), Yevgeni Koucheryavy (TUT, Finland) 2119

Ergodic Sum-Rate of Proportional Fair Scheduling with Multiple Antennas
David Morales (Universitat Pompeu Fabra, Spain), Angel Lozano (Universitat Pompeu Fabra (UPF), Spain) 2124
On Spatial Capacity in Ad-Hoc Networks with Threshold Based Scheduling

Hassan Ghozlan (University of Southern California, USA), Gerhard Kramer (Technische Universität München, Germany) 2279

Tight Upper and Lower Bounds to the Information Rate of the Phase Noise Channel
Luca Barletta (Technische Universität München, Germany), Maurizio Magarini (Politecnico di Milano, Italy), Arnaldo Spalvieri (Politecnico di Milano, Italy) 2284

Markov Models and Estimation

Classification of Markov Sources Through Joint String Complexity: Theory and Experiments
Philippe Jacquet (INRIA, France), Dimitris Milioris (École Polytechnique, France), Wojciech Szpankowski (Purdue University, USA) 2289

Memoryless Representation of Markov Processes
Amichai Painsky (Tel Aviv University, Israel), Saharon Rosset (Tel Aviv University, Israel), Meir Feder (Tel-Aviv University, Israel) 2294

Hidden Markov Model Identifiability via Tensors
Paul Tune (University of Adelaide, Australia), Hung Xuan Nguyen (University of Adelaide, Australia), Matthew Roughan (University of Adelaide, Australia) 2299

Partition Function of the Ising Model via Factor Graph Duality
Mehdi Molkaraie (University of Waterloo, Canada), Hans-Andrea Loeliger (ETH Zurich, Switzerland) 2304

Layered Networks

Two-Hop Interference Channels: Impact of Linear Time-Varying Schemes
Ibrahim Issa (Cornell University, USA), Silas L. Fong (Cornell University, USA), Salman Avestimehr (Cornell University, USA) 2309

Amplify-and-Compute: Function Computation over Layered Networks
Matthew Nokleby (Duke University, USA), Bobak Nazer (Boston University, USA) 2314

Strong Coordination over a Line Network
Matthieu Bloch (Georgia Institute of Technology, France), Joerg Kliwer (New Mexico State University, USA) 2319

Mixed Noisy Network Coding
Arash Behboodi (Technische Universität Berlin, Germany), Pablo Piantanida (SUPELEC, France) 2324

Computation in Networks

Interactive Function Computation
Changho Suh (KAIST, Korea), Michael Gastpar (EPFL, Switzerland) 2329
Quantization and Source Coding

Randomized Quantization and Optimal Design with a Marginal Constraint
Naci Saldi (Queen’s University, Canada), Tamas Linder (Queen’s University, Canada), Serdar Yüksel (Queen’s University, Canada) ................................................................. 2349

Lossy Source Code Using a Constrained Random Number Generator
Jun Muramatsu (NTT Corporation, Japan) .............................................................................. 2354

Sequential functional quantization
Vinith Misra (Stanford University, USA), Krishnamurthy Viswanathan (Hewlett Packard, USA) .... 2359

Rate Loss in Distributed Functional Source Coding
John Z Sun (Massachusetts Institute of Technology, USA), Vivek K Goyal (Massachusetts Institute of Technology, USA) ................................................................................................................. 2364

Coding for Memories 2

In-Memory Computing of Akers Logic Array
Eitan Yaakobi (Caltech, USA), Anxiao Andrew Jiang (Texas A&M University, USA), Jehoshua Bruck (California Institute of Technology, USA) ................................................................. 2369

Redundancy Allocation of Partitioned Linear Block Codes
Yongjune Kim (Carnegie Mellon University, USA), B. V. K. Vijaya Kumar (Carnegie Mellon University, USA) ................................................................. 2374

Compression for Fixed-Width Memories
Ori Rottenstreich (Technion, Israel), Amit Berman (Technion, Israel), Yuval Cassuto (Technion, Israel), Isaac Keslassy (Technion, Israel) ................................................................. 2379

An Efficient Interpolation-Based Systematic Encoder for Low-Rate Blaum-Roth Codes
Qian Guo (Fudan University, P.R. China), Haibin Kan (Fudan University, P.R. China) .............. 2384

Secrecy in Networks and Graphs

On Connectivity Thresholds in Superposition of Random Key Graphs on Random Geometric Graphs
B Santhana Krishnan (Indian Institute of Technology, Bombay, India), Ayalvadi Ganesh (University of Bristol, United Kingdom), D. Manjunath (IIT Bombay, India) ......................... 2389

Simultaneously Generating Multiple Keys in Many to One Networks
Lifeng Lai (Worcester Polytechnic Institute, USA), Lauren Huie (Air Force Research Lab, USA) ................................................................. 2394

Using feedback for secrecy over graphs
Shaunak Mishra (University of California, Los Angeles, USA), Christina Fragouli (EPFL, Switzerland), Vinod M Prabhakaran (Tata Institute of Fundamental Research, India), Suhas Diggavi (University of California Los Angeles, USA) ................................................................. 2399
**Secure Network Coding for Distributed Secret Sharing with Low Communication Cost**
Nihar B Shah (University of California at Berkeley, USA), K. v. Rashmi (University of California at Berkeley, USA), Kannan Ramchandran (University of California at Berkeley, USA) ........................................................................................................ 2404

**Relay-Interference Channels**

**Cyclic Interference Neutralization on the Full-Duplex Relay-Interference Channel**
Henning Maier (RWTH Aachen University, Germany), Rudolf Mathar (RWTH Aachen University, Germany) ........................................................................................................ 2409

**On the Sum-Rate Capacity of the Phase Fading Z-Interference Channel with a Relay in the Weak Interference Regime**
Daniel Zahavi (Ben-Gurion University, Israel), Ron Dabora (Ben-Gurion University, Israel) ............ 2414

**A New Achievable Scheme for Interference Relay Channels**
Byungjun Kang (KAIST, Korea), Si-Hyeon Lee (KAIST, Korea), Sae-Young Chung (KAIST, Korea), Changho Suh (KAIST, Korea) ........................................................................................................ 2419

**Spatial Coupling 2**

**Spatially-Coupled Multi-Edge Type LDPC Codes with Bounded Degrees that Achieve Capacity on the BEC under BP Decoding**
Naruomi Obata (Tokyo Institute of Technology, Japan), Yung-Yih Jian (Texas A&M University, USA), Kenta Kasai (Tokyo Institute of Technology, Japan), Henry D Pfister (Texas A&M University, USA) ........................................................................................................ 2433

**Spatially-Coupled Precoded Rateless Codes**
Kosuke Sakata (Tokyo Institute of Technology, Japan), Kenta Kasai (Tokyo Institute of Technology, Japan), Kohichi Sakaniwa (Tokyo Institute of Technology, Japan) ........................................................................................................ 2438

**And Now to Something Completely Different: Spatial Coupling as a Proof Technique**
Andrei Giurgiu (EPFL, Switzerland), Nicolas Macris (EPFL, Switzerland), Ruediger L Urbanke (EPFL, Switzerland) ........................................................................................................ 2443

**Multi-Dimensional Spatially-Coupled Codes**
Ryunosuke Ohashi (Tokyo Institute of Technology, Japan), Kenta Kasai (Tokyo Institute of Technology, Japan), Keigo Takeuchi (The University of Electro-Communications, Japan) ............. 2448

**The Space of Solutions of Coupled XORSAT Formulae**
S. Hamed Hassani (EPFL, Switzerland), Nicolas Macris (EPFL, Switzerland), Ruediger L Urbanke (EPFL, Switzerland) ........................................................................................................ 2453

**Variations on Channel Capacity**

**A Formula for the Capacity of the General Gel’fand-Pinsker Channel**
Vincent Y. F. Tan (Institute for Infocomm Research, Singapore) ...................................................... 2458

**Channel Code Using a Constrained Random Number Generator**
Jun Muramatsu (NTT Corporation, Japan) .......................................................................................... 2463
Learning Graphical Models

Achieving Capacity of Large Alphabet Discrete Memoryless Channels
Yuguang Gao (Cornell University, USA), Aaron Wagner (Cornell University, USA) .................................................. 2468

A General Formula for Capacity of Channels with Action-Dependent States
Tetsunao Matsuta (Tokyo Institute of Technology, Japan), Tomohiko Uyematsu (Tokyo Institute of Technology, Japan) .................................................................................................................. 2473

Capacity of a Structural Binary Symmetric Channel
Lan Truong (Purdue University, USA), Wojciech Szpankowski (Purdue University, USA) .................. 2478

Recursive FMP for Distributed Inference in Gaussian Graphical Models

Reconstructing a Graph from Path Traces
Vincent Gripon (Telecom Bretagne, France), Michael Rabbat (McGill University, Canada) ............. 2488

On the Difficulty of Learning Power Law Graphical Models
Rashish Tandon (University of Texas at Austin, USA), Pradeep Ravikumar (UT Austin, USA) ...... 2493

Sampling from Gaussian Graphical Models Using Subgraph Perturbations
Ying Liu (Massachusetts Institute of Technology, USA), Oliver Kosut (Arizona State University, USA), Alan Willsky (MIT, USA) ........................................................................................................ 2498

Inferring Neural Connectivity via Measured Delay in Directed Information Estimates
Nima Soltani (Stanford University, USA), Andrea Goldsmith (Stanford University, USA) .......... 2503

Low-Power Communications

On the Minimum Energy of Sending Gaussian Multiterminal Sources over the Gaussian MAC
Nan Jiang (Texas A&M University, USA), Yang Yang (Texas A&M University, USA), Anders Høst-Madsen (University of Hawaii, USA), Zixiang Xiong (Texas A&M University, USA) .......... 2508

‘Information-friction’ and its impact on minimum energy per communicated bit
Pulkit Grover (Carnegie Mellon University, USA) ................................................................................................. 2513

Energy and Sampling Constrained Asynchronous Communication
Aslan Tchamkerten (Telecom ParisTech, France), Venkat Chandar (MIT, USA), Giuseppe Caire (University of Southern California, USA) ........................................................................................................ 2518

On the Capacity of Multiple Access and Broadcast Fading Channels with Full Channel State Information at Low Power Regime
Zouheir Rezki (King Abdullah University of Science and Technology (KAUST), Saudi Arabia), Mohamed-Slim Alouini (King Abdullah University of Science and Technology (KAUST), Saudi Arabia) ........................................................................................................ 2523

Matched Filter Decoding of Random Binary and Gaussian Codes in Broadband Gaussian Channel
Vitaly Abdrashitov (Massachusetts Institute of Technology, USA), Muriel Médard (MIT, USA), Dana Moshkovitz (Massachusetts Institute of Technology, USA) ............................................................... 2528

Channels with Feedback

Upper bounds on Error Probabilities for continuous-time white Gaussian channels with feedback
Shunsuke Ihara (Nagoya University, Japan) ........................................................................................................ 2533

Capacity of a POST Channel with and without Feedback
Himanshu Asnani (Stanford University, USA), Haim H Permuter (Ben-Gurion University, Israel), Tsachy Weissman (Stanford University, USA) ........................................................................................................ 2538

Using a Gaussian Channel Twice
Bo Bernhardsson (Lund University, Sweden) ........................................................................................................ 2543
Variable-Length Coding with Feedback: Finite-Length Codewords and Periodic Decoding
Tsung-Yi Chen (University of California, Los Angeles, USA), Adam Williamson (University of California, Los Angeles, USA), Richard Wesel (University of California, Los Angeles, USA) .......................... 2547

Reliability-based Error Detection for Feedback Communication with Low Latency
Adam Williamson (University of California, Los Angeles, USA), Tsung-Yi Chen (University of California, Los Angeles, USA), Richard Wesel (University of California, Los Angeles, USA) ................. 2552

Rate Distortion Functions

Rate-Distortion Function for Gamma Sources under Absolute-Log Distortion Measure
Kazuho Watanabe (Nara Institute of Science and Technology, Japan), Shiro Ikeda (The Institute of Statistical Mathematics, Japan) ................................................................. 2557

A rate-distortion theory for permutation spaces
Da Wang (Massachusetts Institute of Technology, USA), Arya Mazumdar (University of Minnesota, USA), Gregory Wornell (Massachusetts Institute of Technology, USA) ...................... 2562

A Bit of Secrecy for Gaussian Source Compression
Chen Song (Princeton University, USA), Paul Cuff (Princeton University, USA), H. Vincent Poor (Princeton University, USA) ................................................................. 2567

Privacy of Smart Meter Systems with an Alternative Energy Source
Jesús Gómez-Vilardebó (Centre Tecnològic de Telecomunicacions de Catalunya (CTTC), Spain), Deniz Gündüz (Imperial College London, United Kingdom) ........................................... 2572

Variational Equalities of Directed Information and Applications
Photos A. Stavrou (University of Cyprus, Cyprus), Charalambos D Charalambous (University of Cyprus, Cyprus) ................................................................. 2577

Quick Detection

Quickest Search Over Multiple Sequences with Mixed Observations
Jun Geng (Worcester Polytechnic Institute, USA), Weiyu Xu (University of Iowa, USA), Lifeng Lai (Worcester Polytechnic Institute, USA) ................................................................. 2582

Decentralized Data-Efficient Quickest Change Detection
Taposh Banerjee (University of Illinois at Urbana-Champaign, USA), Venugopal Veeravalli (University of Illinois at Urbana-Champaign, USA), Alexander G Tartakovsky (University of Southern California, USA) ................................................................. 2587

Asymptotically Optimal and Bandwith-efficient Decentralized Detection
Yasin Yilmaz (Columbia University, USA), Xiaodong Wang (Columbia University, USA) ................. 2592

Optimal Sequential Parameter Estimation
Yasin Yilmaz (Columbia University, USA), George V. Moustakides (University of Patras, Greece), Xiaodong Wang (Columbia University, USA) ................................................................. 2597

Social Teaching: Being Informative vs. Being Right in Sequential Decision Making
Joong Bum Rhim (Massachusetts Institute of Technology, USA), Vivek K Goyal (Massachusetts Institute of Technology, USA) ................................................................. 2602

Secrecy Lattices and Low Density Matrices

Low-Density Random Matrices for Secret Key Extraction
Hongchao Zhou (MIT, USA), Venkat Chandar (MIT, USA), Gregory Wornell (Massachusetts Institute of Technology, USA) ................................................................. 2607
Multiple Access Channels with Side Information

On Fading MAC Channels With Asymmetric CSI
Kamal Singh (IIT Bombay, India), Sibi Raj B Pillai (IIT Bombay, India), Bikash K Dey (Indian Institute of Technology Bombay, India) ............................................................... 2626

Multiple Access Channels with Intermittent Feedback and Side Information
Ashish Khisti (University of Toronto, Canada), Amos Lapidoth (ETHZ, Switzerland) .................................................. 2631

Multiple-Access Relay Channels with Non-Causal Side Information at the Relay
Mohammad Osmani-Bojd ( Ferdowsi University of Mashhad, Iran), Assadallah Sahebalam (Ferdowsi University of Mashhad, Research and Development Center of Tarrahan Control Shargh, Iran), Ghosheh Abed Hdtani (Ferdowsi University of Mashhad, Mashhad, Iran) .......................... 2636

Achievable rate region based on coset codes for multiple access channel with states
Arun Padakandla (University of Michigan, USA), Sandeep Pradhan (University Michigan, USA) ... 2641

Quasi-Cyclic LDPC Codes

LT-AF Codes: LT Codes with Alternating Feedback
Ali Talari (Cisco Systems, USA), Nazanin Rahnavard (Oklahoma State University, USA) .................... 2646

Combinatorial optimization for improving QC LDPC codes performance
Irina Bocharova (St. Petersburg University of Information Technologies, Mechanics and Optics, Russia), Rolf Johannesson (Lund University, Sweden), Boris Kudryashov (St. Petersburg University of Information Technology, Mechanics and Optics, Russia) ........................................ 2651

A Revolving Iterative Algorithm for Decoding Algebraic Quasi-Cyclic LDPC Codes
Keke Liu (Department of ECE, University of California, Davis, USA), Shu Lin (UC Davis, USA), Khaled Abdel-Ghaffar (University of California, USA) .......................................................... 2656

Necessary Conditions for Quasi-Cyclic LDPC Codes to Have a Given Girth
Kyung-Joong Kim (Pohang University of Science and Technology, Korea), Jin-Ho Chung (Ulsan National Institute of Science and Technology, Korea), Kyeongcheol Yang (Pohang University of Science and Technology (POSTECH), Korea) .......................................................... 2661

Testing and Identifying

Universal Outlier Hypothesis Testing
Yun Li (University of Illinois, Urbana-Champaign, USA), Sirin Nitinawarat (University of Illinois at Urbana-Champaign, USA), Venugopal Veeravalli (University of Illinois at Urbana-Champaign, USA) ............................................................... 2666

Rooting out the Rumor Culprit from Suspects
Wenxiang Dong (University of Science and Technology of China, P.R. China), Wenyi Zhang (University of Science and Technology of China, P.R. China), Chee Wei Tan (City University of Hong Kong, Hong Kong) ............................................................... 2671
Capacity of Wireless Channels

Capacity of Compound MIMO Gaussian Channels with Additive Uncertainty
Yin Sun (the Ohio State University, USA), Can Emre Koksal (The Ohio State University, USA), Ness B. Shroff (The Ohio State University, USA) ................................................................. 2686

On The Capacity of the MIMO Cognitive Interference Channel
Stefano Rini (Stanford, USA), Andrea Goldsmith (Stanford University, USA) ........................................... 2691

Capacity of a Class of Relay Channel with Orthogonal Components and Non-causal Channel State
Zhixiang Deng (Nanjing University of Posts and Telecommunications, P.R. China), Fei Lang (Nanjing University of Posts and Telecommunications, P.R. China), Bao-Yun Wang (Nanjing University of Posts & Telecommunications, P.R. China), Sheng-mei Zhao (Nanjing University of Posts and Telecommunications, P.R. China) ................................................................. 2696

Precoding Based Network Alignment and the Capacity of a Finite Field X Channel
Sundar Rajan Krishnamurthy (University of California Irvine, USA), Syed Ali Jafar (University of California Irvine, USA) ................................................................. 2701

Cryptography and Information Theory 2

The One-Time Pad Revisited
Christian Matt (ETH Zurich, Switzerland), Ueli Maurer (ETH Zurich, Switzerland) ........................................... 2706

Authentication Amplification by Synchronization
Ueli Maurer (ETH Zurich, Switzerland) ........................................................................................................... 2711

Non-Asymptotic Analysis of Privacy Amplification via Renyi Entropy and Inf-Spectral Entropy
Shun Watanabe (Tokushima University, Japan), Masahito Hayashi (Nagoya University, Japan) ........................................................................................................... 2715

Formalization of Information-Theoretic Security for Key Agreement, Revisited
Junji Shikata (Yokohama National University, Japan) ....................................................................................... 2720

Network Coding 1

Distributed Optimization for Wireless Networks with Inter-session Network Coding
Ziyu Shao (The Chinese University of Hong Kong, Hong Kong), Shuo-Yen Robert Li (The Chinese University of Hong Kong, Hong Kong) ................................................................. 2725

On Uniform Matroidal Networks
Ming He (University of Calgary, Canada), Zongpeng Li (University of Calgary, Canada), Chuan Wu (The University of Hong Kong, Hong Kong), Xunrui Yin (University of Calgary, Canada) ............... 2730

On the Generalized Network Sharing bound and edge-cut bounds for network coding
Sudeep Kamath (U.C. Berkeley, USA), David Tse (University of California at Berkeley, USA) ............... 2735

Round-Robin Overlapping Generations Coding for Fast Content Download
Gauri Joshi (Massachusetts Institute of Technology, USA), Emina Soljanin (Bell Labs, Alcatel - Lucent, USA) ........................................................................................................... 2740
Diversity, Multiplexing and Complexity

GMI and Mismatched-CSI Outage Exponents in MIMO Block-Fading Channels
A. Taufiq Asyhari (National Chiao Tung University, Taiwan), Albert Guillén i Fàbregas (ICREA and Universitat Pompeu Fabra, Spain) .................................................. 2745

Generalized Diversity-Multiplexing Tradeoff of Half-Duplex Relay Networks
Ritesh Kolte (Stanford University, USA), Ayfer Özgür (Stanford University, USA) .......................... 2750

Topics in Learning

Nonlinear Approximations for Motion and Subspace Segmentation
Ali Sekmen (Tennessee State University, USA) ............................................................................. 2755

Weighted Rank Aggregation via Relaxed Integer Programming
Fardad Raisali (University of Illinois at Urbana-Champaign, USA), Farzad Farnoud (Hassanzadeh) (University of Illinois, Urbana-Champaign, USA), Olgica Milenkovic (University of Illinois, USA) ..................................................................................... 2765

Quality Sensitive Price Competition in Spectrum Oligopoly
Arnob Ghosh (University Of Pennsylvania, USA), Saswati Sarkar (University of Pennsylvania, USA) ................................................................................................................................. 2770

Secrecy in Relay Networks

Lattice Coding for Strongly Secure Compute-and-Forward in a Bidirectional Relay
Shashank V (Indian Institute of Science, Bangalore, India), Navin Kashyap (Indian Institute of Science, India) .................................................................................................................. 2775

A coding approach to guarantee information integrity against a Byzantine relay
Eric Graves (University of Florida, USA), Tan Wong (University of Florida, USA) ................. 2780

Cooperation with an Untrusted Relay in Broadcast Channels
Liang Chen (University of Maryland, College Park, USA) ............................................................ 2785

Secure k-Connectivity in Wireless Sensor Networks under an On/Off Channel Model
Jun Zhao (Carnegie Mellon University, USA), Osman Yağan (Carnegie Mellon University, USA), Virgil Gligor (Carnegie Mellon University, USA) .................................................................................. 2790

Two-Way and Relay Channels

Two Way Communication over Exponential Family Type Channels
Lav R. Varshney (IBM Thomas J. Watson Research Center, USA) ........................................ 2795

On The Effect of Self-Interference in Gaussian Two-Way Channels With Erased Outputs
Seyed Ershad Banijamali (University of Waterloo, Canada), Kamyar Moshksar (University of Waterloo, Canada), Amir K. Khandani (University of Waterloo, Canada) ........................................................................ 2800

Delay-Exponent of Decode-Forward Streaming
Khao D. Nguyen (University of South Australia, Australia), Lars K. Rasmussen (KTH Royal Institute of Technology, Sweden) ...................................................................................... 2805

Error Exponents for the Relay Channel
Vincent Y. F. Tan (Institute for Infocomm Research, Singapore) .............................................. 2810
Nonbinary LDPC Codes

Analysis and Enumeration of Absorbing Sets for Non-Binary Graph-Based Codes
Behzad Amiri (UCLA, USA), Joerg Kliewer (New Mexico State University, USA), Lara Dolecek (UCLA, USA) ................................................................. 2815

Approaching Multiple-Access Channel Capacity by Nonbinary Coding-Spreading
Yuta Tsujii (Doshisha University, Japan), Guanghui Song (Doshisha University, Japan), Jun Cheng (Doshisha University, Japan), Yoichiro Watanabe (Doshisha University, Japan) ......................................................... 2820

Message Passing Algorithm with MAP Decoding on Zigzag Cycles for Non-binary LDPC Codes
Takayuki Nozaki (Kanagawa University, Japan), Kenta Kasai (Tokyo Institute of Technology, Japan), Kohichi Sakaniwa (Tokyo Institute of Technology, Japan) .......................................................... 2825

Weight Distribution for Non-binary Cluster LDPC Code Ensemble
Takayuki Nozaki (Kanagawa University, Japan), Masaki Maehara (Tokyo Institute of Technology, Japan), Kenta Kasai (Tokyo Institute of Technology, Japan), Kohichi Sakaniwa (Tokyo Institute of Technology, Japan) .......................................................... 2830

Estimation, Information and Hypothesis Testing

Exponential Error Bounds on Parameter Modulation-Estimation for Memoryless Channels
Neri Merhav (Technion, Israel) .......................................................................................................................... 2835

Interactive Hypothesis Testing Against Independence
Yu Xiang (University of California, San Diego, USA), Young-Han Kim (UCSD, USA) ........................................ 2840

Mismatched Estimation and Relative Entropy in Vector Gaussian Channels
Minhua Chen (University of Chicago, USA), John Lafferty (University of Chicago, USA) .................................... 2845

The Role of Lookahead in Estimation under Gaussian Noise
Kartik Venkat (Stanford University, USA), Tsachy Weissman (Stanford University, USA), Yair Carmon (Technion - Israel Institute of Technology, Israel), Shlomo (Shitz) Shamai (The Technion, Israel) .......................................................... 2850

Wireless and Powerline Communications

Soft-Encoding Distributed Coding for Parallel Relay Systems
Xuanxuan Lu (Lehigh University, USA), Tiffany Jing Li (Lehigh University, USA), Yang Liu (Lehigh University, USA) ................................................................. 2855

Coded Splitting Tree Protocols
Jesper H Sørensen (Aalborg University, Denmark), Čedomir Stefanović (Aalborg University, Denmark), Petar Popovski (Aalborg University, Denmark) ................................................................. 2860

To Obtain or not to Obtain CSI in the Presence of Hybrid Adversary
Yuksel Basciftci (The Ohio State University, USA), Can Emre Koksal (The Ohio State University, USA) .......................... 2865

Matrix Codes and Multitone Frequency Shift Keying for Power Line Communications
Yeow Meng Chee (Nanyang Technological University, Singapore), Han Mao Kiah (Nanyang Technological University, Singapore), Purnarasus Purkayastha (Nanyang Technological University, Singapore) ................................................................. 2870
Recurrence, Patterns and Matching

**Tight Bounds for Universal Compression of Large Alphabets**
Jayadev Acharya (University of California, San Diego, USA), Hirakendu Das (University of California San Diego, USA), Ashkan Jafarpour (UCSD, USA), Alon Orlitsky (University of California, San Diego, USA), Ananda Theertha Suresh (University of California, San Diego, USA) .......................................................... 2875

**On Large Deviation Property of Recurrence Times**
Siddharth Jain (Indian Institute of Technology Kanpur, India), Rakesh K. Bansal (Indian Institute of Technology, Kanpur, India) .......................................................................................................................... 2880

**On Match Lengths and the Asymptotic Behavior of Sliding Window Lempel - Ziv Algorithm for Zero Entropy Sequences**
Siddharth Jain (Indian Institute of Technology Kanpur, India), Rakesh K. Bansal (Indian Institute of Technology, Kanpur, India) .......................................................................................................................... 2885

Network Coding 2

**Communication over Finite-Ring Matrix Channels**
Chen Feng (University of Toronto, Canada), Roberto W. Nobrega (Federal University of Santa Catarina, Brazil), Frank R. Kschischang (University of Toronto, Canada), Danilo Silva (Federal University of Santa Catarina, Brazil) .......................................................................................................................... 2890

**An Analysis on Minimum s-t Cut Capacity of Random Graphs with Specified Degree Distribution**
Yuki Fujii (Nagoya Institute of Technology, Japan), Tadashi Wadayama (Nagoya Institute of Technology, Japan) .......................................................................................................................... 2895

**Linear Network Coding Capacity for Broadcast Erasure Channels With Feedback, Receiver Coordination, and Arbitrary Security Requirement**
Chih-Chun Wang (Purdue University, USA) .......................................................................................................................... 2900

**Stable and Capacity Achieving XOR-based Policies for the Broadcast Erasure Channel with Feedback**
Sophia A. Athanasiadou (Aristotle University of Thessaloniki, Greece), Marios Gatzianas (EPFL, Switzerland), Leonidas Georgiadis (Aristotle University of Thessaloniki, Greece), Leandros Tassiulas (University of Thessaly, Greece) .......................................................................................................................... 2905

Space-Time Signaling

**Fast-Decodable MIDO Codes with Large Coding Gain**
Pavan K. Srinath (Indian Institute of Science, India), B. Sundar Rajan (Indian Institute of Science, India) .......................................................................................................................... 2910

**Full-Rate, Full-Diversity, Finite Feedback Space-Time Schemes with Minimum Feedback and Transmission Duration**
Lakshmi Prasad Natarajan (Indian Institute of Science, Bangalore, India), B. Sundar Rajan (Indian Institute of Science, India) .......................................................................................................................... 2915

**Variable-Length Channel Quantizers for Maximum Diversity and Array Gains**
Erdem Koyuncu (University of California, Irvine, USA), Hamid Jafarkhani (University of California, Irvine, USA) .......................................................................................................................... 2920

Insertion and Deletion Channels

**Counting Sequences Obtained From the Synchronization Channel**
Frederic Sala (University of California, Los Angeles, USA), Lara Dolecek (UCLA, USA) .......................................................................................................................... 2925
Synchronization from Insertions and Deletions Under a Non-Binary, Non-Uniform Source
Nicolas Bitouzé (University of California, Los Angeles, USA), Lara Dolecek (UCLA, USA) ........................................ 2930

Energy-Efficient Communication in the Presence of Synchronization Errors
Yu-Chih Huang (Texas A&M University, USA), Urs Niesen (Bell Labs, Alcatel-Lucent, USA), Piyush Gupta (Bell Labs, Alcatel-Lucent, USA) ........................................................................................................... 2935

An Upper Bound on the Capacity of Non-Binary Deletion Channels
Mojtaba Rahmati (Arizona State University, USA), Tolga M. Duman (Bilkent University, Turkey) ........................................... 2940

Topics in Secrecy

Reliable Deniable Communication: Hiding Messages in Noise
Pak Hou Che (The Chinese University of Hong Kong, Hong Kong), Mayank Bakshi (The Chinese University of Hong Kong, Hong Kong), Sidharth Jaggi (Chinese University of Hong Kong, Hong Kong) ........................................................................................................... 2945

Artificial Intersymbol Interference (ISI) to Exploit Receiver Imperfections for Secrecy
Azadeh Sheikholeslami (University of Massachusetts at Amherst, USA), Dennis Goeckel (University of Massachusetts, USA), Hossein Pishro-Nik (University of Massachusetts, Amherst, USA) ........................................................................................................... 2950

Secure Cascade Channel Synthesis
Sanket Satpathy (Princeton University, USA), Paul Cuff (Princeton University, USA) ........................................... 2955

On the Impact of Network-State Knowledge on the Feasibility of Secrecy
Samir M. Perlaza (Princeton University, USA), Arsenia Chorti (Princeton University, USA), H. Vincent Poor (Princeton University, USA), Zhu Han (University of Houston, USA) ........................................... 2960

Transmission over Broadcast Channels

The Degraded Broadcast Channel with Non-Causal Action-Dependent Side Information
Yossef Steinberg (Technion, Israel) ........................................................................................................... 2965

A Comparison of Superposition Coding Schemes
Lele Wang (UCSD, USA), Eren Şaşoğlu (University of California, San Diego, USA), Bernd Bandemer (University of California, San Diego, USA), Young-Han Kim (UCSD, USA) ........................................................................................................... 2970

A Block Markov Encoding Scheme for Broadcasting Nested Message Sets
Shirin Saeedi Bidokhti (Technische Universität München, Germany), Vinod M Prabhakaran (Tata Institute of Fundamental Research, India), Suhas Diggavi (University of California Los Angeles, USA) ........................................................................................................... 2975

Cooperative Broadcasting with Successive Refinement based Compression
Seçkin Anıl Yıldırım (TOBB University of Economics and Technology, Turkey), Melda Yuksel (TOBB University of Economics and Technology, Turkey) ........................................................................................................... 2980

Successive Refinement with Conditionally Less Noisy Side Information
Roy Timo (University of South Australia, Australia), Tobias J. Oechtering (KTH Royal Institute of Technology, Sweden), Michele A Wigger (Telecom ParisTech, France) ........................................................................................................... 2985

Decoding LDPC Codes

Improving the BP estimate over the AWGN channel using Tree-structured Expectation Propagation
Luis Salamanca (University of Seville, Spain), Juan José Murillo-Fuentes (Universidad de Sevilla, Spain), Pablo M. Olmos (Universidad Carlos III de Madrid, Spain), Fernando Pérez-Cruz (Universidad Carlos III de Madrid, Spain) ........................................................................................................... 2990

### Performance Bounds in Coding

Equidistant Codes Meeting the Plotkin Bound are Not Optimal on the Binary Symmetric Channel
Po-Ning Chen (National Chiao Tung University, Taiwan), Hsuan-Yin Lin (National Chiao Tung University, Taiwan), Stefan M. Moser (National Chiao Tung University, Taiwan) 3015

Extending Divsalar's Bound to Nonbinary Codes with two Dimensional Constellations
Dariush Divsalar (Jet Propulsion Laboratory, USA) 3020

An "Umbrella" Bound of the Lovász-Gallager Type
Marco Dalai (University of Brescia, Italy) 3025

Finite Length Analysis on Listing Failure Probability of Invertible Bloom Lookup Tables
Daichi Yugawa (Department of Computer Science and Engineering Nagoya Institute of Technology, Japan), Tadashi Wadayama (Nagoya Institute of Technology, Japan) 3030

### Topics in Wireless Communications

Energy Efficient Power Allocation for MIMO Multihop Networks
Kalle Lähetkangas (Centre for Wireless Communications, Finland), Marian Codreanu (University of Oulu, Finland), Behnam Aazhang (Rice University, USA) 3035

Coded Power Control: Performance Analysis
Benjamin Larrousse (University Paris 11, France), Samson E Lasaulce (CNRS - Supelec, France) 3040

The Capacity of Wireless Channels: A Physical Approach
Wonsok Jeon (KAIST, Korea), Sae-Young Chung (KAIST, Korea) 3045

Media-based Modulation: A New Approach to Wireless Transmission
Amir K. Khandani (University of Waterloo, Canada) 3050

### Source Coding with Side Information

Non-Asymptotic and Second-Order Achievability Bounds for Source Coding With Side-Information
Shun Watanabe (Tokushima University, Japan), Shigeaki Kuzuoka (Wakayama University, Japan), Vincent Y. F. Tan (Institute for Infocomm Research, Singapore) 3055

Source Coding with in-Block Memory and Controllable Causal Side Information
Osvaldo Simeone (New Jersey Institute of Technology, USA) 3060
Utility of Encoder Side Information for the Lossless Kaspi/Heegard-Berger Problem
Thomas Laich (ETH Zurich, Switzerland), Michele A Wigger (Telecom ParisTech, France) 3065

One-shot source coding with coded side information available at the decoder
Naqueeb Warsi (Tata Institute of Fundamental Research, India) 3070

The Ahlswede-Han Conjecture on Channel with Coded Side Information at the Decoder
Wei Kang (Southeast University, P.R. China), Nan Liu (Southeast University, P.R. China) 3075

Network Coding 3

Joint Channel/Network Coding for Star Networks
Christian Koller (Ion Torrent, USA), Martin Haenggi (University of Notre Dame, USA), Joerg Kliwer (New Mexico State University, USA), Daniel J. Costello, Jr. (University of Notre Dame, USA) 3080

On the tightness of the generalized network sharing bound for the two-unicast-Z network
Weifei Zeng (MIT, USA), Viveck Cadambe (MIT, USA), Muriel Médard (MIT, USA) 3085

Rapprochement between Instantly Decodable and Random Linear Network Coding
Mingchao Yu (The Australian National University, Australia), Neda Aboutorab (The Australian National University, Australia), Parastoo Sadeghi (The Australian National University, Australia) 3090

Instantly Decodable Network Coding for Delay Reduction in Cooperative Data Exchange Systems
Neda Aboutorab (The Australian National University, Australia), Parastoo Sadeghi (The Australian National University, Australia), Shahriar Etemadi Tajbakhsh (The Australian National University, Australia) 3095

Relaying and Cooperation

Cooperative Relaying in a Poisson Field of Interferers: A Diversity Order Analysis
Ralph Tanbourgi (Karlsruhe Institute of Technology (KIT), Germany), Holger Jäkel (Karlsruhe Institute of Technology (KIT), Germany), Friedrich K. Jondral (Karlsruhe Institute of Technology, Germany) 3100

Optimality Range of Largest Eigenmode Relaying with Partial Channel State Information in the Relay
Mehdi Molu (Vienna University of Technology, Austria), Norbert Goertz (Vienna University of Technology, Austria) 3105

How Sensitive is Compute-and-Forward to Channel Estimation Errors?
Koralia N. Pappi (Aristotle University of Thessaloniki, Greece), George K. Karagiannidis (Aristotle University of Thessaloniki, Greece), Robert Schober (University of British Columbia, Canada) 3110

Fractionally Spaced Equalization for Broadband Amplify-and-Forward Cooperative Systems
Mohammad Reza Heidarpour (University of Waterloo, Canada), Murat Uysal (Ozyegin University, Turkey), Mohamed Oussama Damen (University of Waterloo, Canada) 3115

Sequence Design

Autocorrelation and Linear Complexity of Quaternary Sequences of Period 2p Based on Cyclotomic Classes of Order Four
Vladimir Edemskiy (Novgorod State University, Russia) 3120
On optimal binary Z-complementary pair of odd period
Zilong Liu (Nanyang Technological University, Singapore), Yong Liang Guan (Nanyang
Technological University, Singapore), Udaya Parampalli (The University of Melbourne,
Australia) .................................................................................................................. 3125

Quadratic Weight Vector for Tighter Aperiodic Levenshtein Bound
Serdar Boztas (RMIT University, Australia), Zilong Liu (Nanyang Technological University,
Singapore), Yong Liang Guan (Nanyang Technological University, Singapore), Parampalli
Udaya (University of Melbourne, Australia) ........................................................................ 3130

Large Zero Correlation Zone of Golay Pairs and QAM Golay Pairs
Guang Gong (University of Waterloo, Canada), Fei Huo (University of Waterloo, Canada),
Yang Yang (Southwest Jiaotong University, P.R. China) .................................................. 3135

An upper bound on the partial-period correlation of Zadoff-Chu sequences
Tae-kyo Lee (Pohang University of Science and Technology, Korea), Jin-Ho Chung (Ulsan
National Institute of Science and Technology, Korea), Kyeongcheol Yang (Pohang University
of Science and Technology (POSTECH), Korea) ................................................................. 3140

Security, Privacy and Sharing

To Surprise and Inform
Lav R. Varshney (IBM Thomas J. Watson Research Center, USA) .................................... 3145

Conditional Equivalence of Random Systems and Indistinguishability Proofs
Ueli Maurer (ETH Zurich, Switzerland) ............................................................................. 3150

Assisted Sampling of Correlated Sources
Vinod M Prabhakaran (Tata Institute of Fundamental Research, India), Anand D. Sarwate
(Toyota Technological Institute at Chicago, USA) ......................................................... 3155

Information-Theoretically Secure Three-Party Computation with One Corrupted Party
Ye Wang (Mitsubishi Electric Research Laboratories, USA), Prakash Ishwar (Boston University,
USA), Shantanu Rane (Mitsubishi Electric Research Laboratories, USA) ................................ 3160

How Many Queries Will Resolve Common Randomness?
Himanshu Tyagi (University of Maryland, College Park, USA), Prakash Narayan (University of
Maryland, USA) ............................................................................................................... 3165
